### Index of Conference Proceedings

The economic literature on international migration interests policymakers as well as academics throughout the social sciences. These volumes, the first of a new subseries in the Handbooks in Economics, describe and analyze scholarship created since the inception of serious attention began in the late 1970s. This literature appears in the general economics journals, in various field journals in economics (especially, but not exclusively, those covering labor market and human resource issues), in interdisciplinary immigration journals, and in papers by economists published in journals associated with history, sociology, political science, demography, and linguistics, among others. Covers a range of topics from labor market outcomes and fiscal consequences to the effects of international migration on the level and distribution of income – and everything in between. Encompasses a wide range of topics related to migration and is multidisciplinary in some aspects, which is crucial on the topic of migration Appeals to a large community of scholars interested in this topic and for whom no overviews or summaries exist

A New York Times Bestseller. A "fascinating" (Thomas L. Friedman, New York

Times) look at how digital technology is transforming our work and our lives. In recent years, Google's autonomous cars have logged thousands of miles on American highways and IBM's Watson trounced the best human Jeopardy! players. Digital technologies—with hardware, software, and networks at their core—will in the near future diagnose diseases more accurately than doctors can, apply enormous data sets to transform retailing, and accomplish many tasks once considered uniquely human. In *The Second Machine Age* MIT's Erik Brynjolfsson and Andrew McAfee—two thinkers at the forefront of their field—reveal the forces driving the reinvention of our lives and our economy. As the full impact of digital technologies is felt, we will realize immense bounty in the form of dazzling personal technology, advanced infrastructure, and near-boundless access to the cultural items that enrich our lives. Amid this bounty will also be wrenching change. Professions of all kinds—from lawyers to truck drivers—will be forever upended. Companies will be forced to transform or die. Recent economic indicators reflect this shift: fewer people are working, and wages are falling even as productivity and profits soar. Drawing on years of research and up-to-the-minute trends, Brynjolfsson and McAfee identify the best strategies for survival and offer a new path to prosperity. These include revamping education so that it prepares people for the next economy instead of the last one, designing new collaborations that pair brute processing power with human ingenuity, and embracing policies that make sense in a radically transformed landscape. A fundamentally optimistic book, *The Second Machine Age* alters how we think about issues of technological, societal, and economic progress.

This volume gathers contributions in the closely linked fields of English language assessment and language education. The contributors from China and Hong Kong represent a mixture of established and new scholars. Areas covered in the language education section range across major developments in the redefining of Hong Kong's secondary and tertiary curricula, as well as the huge field of China's vocational education curriculum. Regarding assessment, the contributions reflect major changes in the marking of examinations in Hong Kong, whereby all examinations from 2012 onwards are marked onscreen, to quality control issues in the administration of China's College English Test, which is taken by over 10 million candidates every year.

This book is the first comprehensive, research-based description of the development, structure, and use of Welsh English, a contact-induced variety of English spoken in the British Isles. Present-day accents and dialects of Welsh

English are the combined outcome of historical language shift from Welsh to English, continued bilingualism, intense contacts between Wales and England, and multicultural immigration. As a result, Welsh English is a distinctive, regionally and sociolinguistically diverse variety, whose status is not easily categorized. In addition to existing research, the present volume utilizes a wide range of spoken corpus data gathered from across Wales in order to describe the phonology, lexis, and grammar of the variety. It includes discussion of sociolinguistic and cultural contexts, and of ongoing change in Welsh English. The place that Welsh English occupies in relation to other Englishes in the Inner and Outer Circles is also analysed. The book is accessible to the non-specialist, but of particular use to scholars, teachers, and students interested in English in Wales, Britain, and the world. It provides an unparalleled resource on this long-standing and vibrant variety.

In this gripping narrative, Carlo Bastasin reconstructs the main political decisions of the euro crisis, unveiling the hidden interests and the secret diplomacy behind the scene. The European dream was both the rejection of war and the creation of a new spirit of peaceful cooperation. Yet confrontation has been the hallmark of the euro crisis, and national opportunistic gimmicks have driven the awkward attempts to solve the crisis itself. Today, Europe is in a crisis of democracy, which Bastasin has dubbed, "the first War of Interdependence of the global age." Praise for the first edition of Saving Europe Bastasin does an admirable job in analysing the euro-zone's economic challenges and is a sure-footed guide through the seemingly endless European Union summit meetings that were supposed to resolve them. He also has an eye for the human detail that makes his sad account of institutional muddle surprisingly compelling. — Financial Times Bastasin's book is worth reading

for its detailed political narrative of the eurozone crisis to date, focusing on the interaction among decision-makers in Europe's capitals. — Foreign Affairs A reconstruction that may be considered definitive. Revelations on the European negotiations are written with talent and go hand in hand with no-esoteric economic analysis and with the right amount of realism to reach the political substance. —Corriere della Sera Anyone looking for general knowledge and deeper understanding of the crisis, I can recommend a formidable analysis by Carlo Bastasin: Saving Europe. The author is a very unusual combination of a qualified economist and driven journalism. —Svenska Dagbladet

What new theories, evidence, explanations, and policies have shaped our studies of income distribution in the 21st century? Editors Tony Atkinson and Francois Bourguignon assemble the expertise of leading authorities in this survey of substantive issues. In two volumes they address subjects that were not covered in Volume 1 (2000), such as education, health and experimental economics; and subjects that were covered but where there have been substantial new developments, such as the historical study of income inequality and globalization. Some chapters discuss future growth areas, such as inheritance, the links between inequality and macro-economics and finance, and the distributional implications of climate change. They also update empirical advances and major changes in the policy environment. The volumes define and organize key areas of income distribution studies Contributors focus on identifying newly developing questions and opportunities for future research The authoritative articles emphasize the ways that income mobility and inequality studies have recently gained greater political significance

David Crystal's classic English as a Global Language considers the history, present status and future of the English language, focusing on its role as the leading international language. English has been deemed the most 'successful' language ever, with 1500 million speakers internationally, presenting a difficult task to those who wish to investigate it in its entirety. However, Crystal explores the subject in a measured but engaging way, always backing up observations with facts and figures. Written in a detailed and fascinating manner, this is a book written by an expert both for specialists in the subject and for general readers interested in the English language.

Including the voices of key protagonists in the development of the public health workforce, this book is an important addition to the history of public health in England. It charts events leading to the unique achievement, from 2003, of specialist status, equivalent to public health medical consultants, for those from non-medical backgrounds. Setting these changes in context it discusses implications for practitioners and the wider UK public health workforce. A lively and comprehensive review of policy change, Multidisciplinary public health: Understanding the development of the modern workforce concludes with a reflection on the new public health system under way in England, making useful comparisons with the rest of the UK. This is an invaluable resource for anyone with

an interest in public health, including public health academics and relevant postgraduate students.

Whilst Christian theology is familiar with questions about the relation of church and state, divine and human law, little attention has been devoted to questions of international law. Esther D. Reed offers a systematic engagement with contemporary issues of international law and its relevance for modern theology. Reed discusses numerous issue driven topics, including: challenges to classic just-war thinking from so-called fourth generation warfare, peoples and nationhood within divine providence, the ethics of territorial borders and the militarization of human intervention. By discussing selected biblical texts Reed helps to move the issues of international law higher up the agenda of Christian theology, ethics and moral reasoning.
