Who knew? In the fall of 1914, Canadians had earned a reputation as hard-drinking and poorly disciplined troops. No one expected much from them. Certainly not the British! All they wanted was a sharp salute as the men did what they were told. Prime Minister Sir Robert Borden and his Minister of Militia and Defence, Colonel Sam Hughes, had different ideas. Borden had no choice! When England declared war, Canada was automatically at war too. Hughes, however, was eager to get his boys bloodied before the war was over. He would do anything in his power to get the Canadians into the fight. As the guns sounded in August, the first contingent gathered at Valcartier. Corps of Guide Captain James Llewellyn had trained for this moment, and he was not about to miss out. Gunner Paul Ryan had volunteered to escape his family and to impress a girl. Nursing Sister Samantha Lonsdale had answered the call because she needed a job, and going to war was an adventure. As the months rolled by, it was at Valcartier and Salisbury Plain that they helped forge the Canadian Expeditionary Force into one of the most formidable weapons of the First World War.

The troubleshooting charts in the second chapter--probably the most comprehensive ever published--are followed by system-specific chapters, allowing readers to quickly diagnose problems, then turn to the chapter with solutions. The role Hans Hahn played in the Vienna Circle has not always been sufficiently appreciated. It was important in several ways. In the first place, Hahn belonged to the trio of the original planners of the Circle. As students at the University of Vienna and throughout the first decade of this century, he and his friends, Philipp Frank and Otto Neurath, met more or less regularly to discuss philosophical questions. When Hahn accepted his first professorial position, at the University of Czernowitz in the north east of the Austrian empire, and the paths of the three friends parted, they decided to continue such informal discussions at some future time - perhaps in a somewhat larger group and with the cooperation of a philosopher from the university. Various events delayed the execution of the project. Drafted into the Austrian army during the first world war" Hahn was wounded on the Italian front. Toward the end of the war he accepted an offer from the University of Bonn extended in recognition of his remarkable mathematical achievements. He remained in Bonn until the spring of 1921 when he returned to Vienna and a chair of mathematics at his alma mater. There, in 1922, the Mach-Boltzmann professorship for the philosophy of the inductive sciences became vacant by the death of Adolf Stohr; and Hahn saw a chance to realize his and his friends' old plan.

Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinetmaker, and machinist. He and his wife built their own cruising sailboat, Nada, a project they completed in 1984. Calder is author of numerous articles for Yachting Monthly and many other magazines worldwide, as well as the bestselling Boatowner's Practical and Technical Cruising Manual and Boatowner's Mechanical and Electrical Manual, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains how diesel engines work, defines new terms, and lifts the veil of mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: 'there is no

reason for a boatowner not to have a troublefree relationship with a diesel engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small ones before they become large ones.'

There is growing interest in the use of Neuro Linguistic Programming (NLP) as a Qualitative Market Research technique. NLP was previously used in psychology to understand how people think and react, and as a tool in self-development, interpersonal skills and business, looking at how our brains think and experience the world. Qualitative Market research experts now see that using NLP can help the researchers understand the human brain and, armed with this power, they can find out the truth from interviewees. The Hidden Art of Interviewing People shows how, by using NLP and related techniques in interviews, the market researcher can see beyond the obvious to the truth.
