The Cracker Baker

Includes more than 550 topics in the life, earth, and physical sciences as well as in engineering, technology, math, environmental science, and psychology.

Quantitative Analysis

American Chemical Journal

The Analyst

Describes medicinal and pharmaceutical substances, formulated preparations, blood products, immunological products, radiopharmaceutical preparations, and surgical materials. Includes edited monographs from the European Pharmacopoeia.

Clinical Urinology

Proceedings of the Society are included in v. 1-59, 1879-1937.

Clinical Diagnosis

For one-semester courses in Basic Chemistry, Introduction to Chemistry, and Preparatory Chemistry, and the first term of Allied Health Chemistry. This text is carefully crafted to help students learn chemical skills and concepts more effectively. Corwin covers math and problem-solving early in the text; he builds student confidence and skills through innovative problem-solving pedagogy and technology formulated to meet student needs.

Understanding practical pharmaceutical calculations is essential for healthcare professionals. Even simple errors in calculation can have serious - and possibly fatal - consequences. Fully revised and updated, with entirely new chapters and a focus on basic arithmetic, this best-selling practical guide begins by explaining simple units of measurements and expressions of concentration, followed by demonstrations of how straight-forward calculations can be used to estimate individual patient dosages. At the end of each chapter there are self assessment calculations, with fully worked answers - ideal for revision and self-assessment. With the book and free downloads you can always have the guide on hand when you need it most.
