## **HIV and AIDS:**

A study of governance in the emerging global domain, this book traces the evolution of global public policy making by focusing on four entities: a globalizing sector (health); a global disease (HIV/AIDS); a global organization (the Global Fund); and a major sovereign state (China).

The HIV pandemic has caused serious challenges for the Church as well as for theology. The pandemic has brought enormous human suffering to individuals and has affected families and entire societies. In this context, churches need to listen and to learn, and not least to respond, to thereby mold their own actions and futures. In so doing, this book aims to enable churches to become more HIV and AIDS competent. Vulnerability, Churches, and HIV includes two kinds of

contributions. First, researchers present their thoughts about theology, the church, and HIV. A pastoral letter from the bishops of the Church of Sweden provides a second perspective. The letter makes recommendations to decision-making bodies, patent holders, and decision makers in the pharmaceutical industry. The letter also guides parishes and church workers. Contributors include editor Goran Gunner, Musa W. Dube, Susanne Rappmann, Kenneth R. Overberg, Edwina Ward, and the bishops of the Church of Sweden. The book is the first volume in the Church of Sweden Research Series.

Alexander the Great led one of the most successful armies in history and conquered nearly the entirety of the known world while wearing armor made of cloth. How is that possible? In *Reconstructing Ancient Linen Body Armor*, Gregory S. Aldrete, Scott Bartell, and Alicia Aldrete provide the answer. An extensive multiyear project in experimental archaeology, this pioneering study presents a thorough investigation of the linothorax, linen armor worn by the Greeks, Macedonians, and other ancient Mediterranean warriors. Because the linothorax was made of cloth, no examples of it have survived. As a result, even though there are dozens of references to the linothorax in ancient literature and nearly a thousand images of it in ancient art, this linen armor remains relatively ignored and misunderstood by scholars. Combining traditional textual and archaeological analysis with hands-on reconstruction and experimentation, the authors unravel the mysteries surrounding the linothorax. They have collected and examined all of the literary, visual, historical, and archaeological evidence for the armor and detail their efforts to replicate the armor using materials and techniques that are as close as possible to those employed in antiquity. By reconstructing actual examples using authentic materials, the authors were able to scientifically assess the true qualities of linen armor for the first time in 1,500 years. The tests reveal that the linothorax provided surprisingly effective protection for ancient warriors, that it had several advantages over bronze armor, and that it

even shared qualities with modern-day Kevlar. Previously featured in documentaries on the Discovery Channel and the Canadian History Channel, as well as in U.S. News and World Report, MSNBC Online, and other international venues, this groundbreaking work will be a landmark in the study of ancient warfare.

This book provides all the vital information you need to know about tuberculosis, especially in the face of drug-resistant strains of the disease. Coverage includes which patient populations face an elevated risk of infection, as well as which therapies are appropriate and how to correctly monitor ongoing treatment so that patients are cured. Properly administer screening tests, interpret their results, and identify manifestations of the disease, with authoritative guidance from expert clinicians from around the world. Discusses screening tests for tuberculosis so you can interpret their results and

identify not only common manifestations of the disease, but also those that are comparatively rare—such as tuberculosis in pregnant women. Covers all clinical aspects of tuberculosis in children, including current practices on managing those infected with HIV. Provides details on how best to interact with the public health system in both industrialized and developing countries. Addresses the social aspects of tuberculosis and presents the latest advances on new and potential vaccines against tuberculosis. Offers the expertise of internationally recognized tuberculosis clinicians to provide you with well-rounded, global coverage. Features numerous illustrations to provide clear and detailed depictions of rare manifestations of tuberculosis.

This volume contains the proceedings of a symposium held in honour of Jean-Pierre Vigi er in Toronto, Canada, in August 1995. It encompasses many areas in which he has been active over the years, such as stochastic interpretations of quantum mechanics, particle physics and electromagnetic theory. The papers have been loosely ordered in the following categories: ideas about the nature of light and photons; electrodynamics; the formulation and interpretation of quantum mechanics; and aspects of relativity theory. Some of the papers presented deal

with alternate interpretations of quantum phenomena in the tradition of Vigier, Bohm et al. The current experimental situation allows for the first time for individual quantum events to be studied, and this opens possibilities for challenges to the orthodox interpretation to be realised. Audience: This book will be of interest to graduate level students and researchers whose work involves quantum mechanics, electromagnetic theory, optics and optoelectronics.

The beginning of the end. The Apocalypse. A nuclear fallout wiped out every living thing on the planet, except for a few thousand of us who took shelter in underground bunkers across the globe. Now, after thirteen long years, we were finally able to return to the topside to begin to rebuild. We thought we were alone. We were never more wrong. Before the fallout, scientists had worked on creating an anti-radiation vaccine (ARV). The first two attempts failed, but despite the incomplete tests and results, the government approved and distributed the third serum to the masses in an effort to aid those who had no shelter. It worked, keeping those who remained on the topside alive, but it also altered and mutated them. This new and infectious threat had completely outnumbered us. Now, we not only had to rebuild our planet. We would have to fight for it. My name is Abigail Park. I'm seventeen, and this is my story.

The definitive advanced-level clinical pharmacokinetics text is now in its Fourth Edition, with new emphasis on the relationship between pharmacokinetics and pharmacodynamics. Written by 70 leading researchers and practitioners, this book is a rigorous yet practical text on the application of pharmacokinetic methods, pharmacodynamic principles, and pharmacotherapeutic data for optimal, individualized drug therapy. This edition includes case studies that apply concepts to actual patient problems. New chapters cover tacrolimus, mycophenolic acid, sirolimus, antipsychotics, and critical evaluation of therapeutic drug monitoring

Respiratory System, 2nd Edition provides a concise and highly visual approach to the basic sciences and clinical pathology of this body system. This volume in The Netter Collection of Medical Illustrations (the CIBA "Green Books") has been expanded and revised by Dr. David Kaminsky to cover important topics like pulmonary hypertension, COPD, asthma, drug-resistant TB, modern endoscopic and surgical techniques, and more. Classic Netter art, updated illustrations, and modern imaging make this timeless work essential to your library. Access rare illustrations in one convenient source from the only Netter work devoted specifically to the respiratory system. Get a complete overview of the respiratory system through multidisciplinary coverage from physiology and biochemistry to adult and pediatric medicine and surgery. Gain a quick understanding of complex topics from a concise text-atlas format that provides a context bridge between primary and specialized medicine. Grasp the nuances of the pathophysiology
