Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Classroom tested and reviewed, the third Canadian edition of Dosage Calculations draws upon the strengths of two marketing leading Canadian editions and nine US editions that have together helped over 1 million faculty and students allay math anxiety and promote confidence in their ability to perform accurate calculations. The new edition also responds to changes in the healthcare system by introducing

new drugs, replacing outdated drugs, and discussing new or refined ways of administering medications. This text is directed at the student or professional who feels uncomfortable with mathematics and wants to improve their ability to perform accurate drug dosage calculations. As a pioneer Canadian text in the topic of medication calculations, the authors have transcended provincial practices to provide a nation-wide perspective on dosage calculations. The text teaches the ?Three-Step Approach? for calculating dosages: 1. Convert measurements to the same unit; 2. Consider what dosage is reasonable; and 3. Calculate using the formula method.

the outcomes of a set of twin forces of globalization and regionalization. Therefore, each regional chapter stresses the global systems of connection that drive unique regional processes, making regions different. By studying regions, students not only learn the critical elements of different places, but also come to understand the fundamental processes that drive change.
