Corporate Finance: A Focused Approach

Public Investment Management Reference Guide

Fundamentals of Corporate Finance, 2nd Edition offers an innovative integration of conceptual understanding and problem-solving of intuition and decision-making of the authors' industry and classroom/research experience with current real-world examples and online practice. Authors Robert Parrino, David Kidwell, and Thomas Bates believe that students who understand the intuition underlying the basic concepts of finance are better able to develop the critical judgments necessary to apply financial tools in real decision-making situations. Their text develops intuitive thinking while simultaneously helping students develop problem solving and computational skills. It then shows students how to apply intuition and analytical skills to decision making while integrating it all with valuation and building shareholder value.

Mathematical Programming and the Analysis of Capital Budgeting Problems

Capital Budgeting and Investment Analysis marries theory with practice by providing numerous illustrations of real-world applications. It includes a discussion of capital budgeting's link to the corporation's strategy for creating value as well as addressing the international aspects of capital budgeting. The basic philosophy of this book is to help students develop their critical thinking skills required to assess potential investments. Topics covered include the basics of capital budgeting, the estimation of project cash flows and the project cost of capital, risk analysis in capital budgeting, and corporate strategy and its relationship to the capital-budgeting decision.

Financial Management

Capital budgeting is an important part of the financial management of a business organization. It is a process that business houses use to evaluate an investment project. The decision of whether to accept or deny an investment project is capital budgeting decision. Capital budgeting is important because it determines the long-term economic and financial profitability of any investment project. It lays down the future success of a business. Capital Budgeting aims to develop not only an understanding of the concepts of capital budgeting but also to provide its practical application to help students learn both theory and practice of capital budgeting used in the financial management of a business organization. It analyzes the capital budgeting practices of corporate enterprises in India in diverse sectors, on comparative basis, in order to provide the reader a better insight into the various issues and challenges regarding capital budgeting management.

Capital Budgeting

1. 1. Motivation This book is based on the view that both public and private decision making, in practice, can often be improved upon by means of formal (nonnative) decision models and methods. To some extent, the validity of this statement can be measured by the impressive number of successes of disciplines as operations research and management science. However, as witnessed by the many discussions in the professional journals in these fields, many models and methods do not completely meet the requirements of decision making in practice. Of all possible origins of these clear shortcomings, we mainly focus on only one: the fact that most of these models and methods are unsuitable for decision situations in which multiple and possibly conflicting objectives play a role, because they are concentrated on the (optimal) fulfilment of only one objective. The need to account for multiple goals was observed relatively early. Hoffman [1955], while describing 'what seem to be the principal areas (in linear programming) where new ideas and new methods are needed' gives an example with conflicting goals. In this problem, the assignment of relative weights is a great problem for the planning staff and is 'probably not the province of the mathematician engaged in solving this problem'. These remarks were true precursors of later developments. Nevertheless, the need for methods dealing with multiple goals was not widely recognized until much later.

The Public Investment Management (PIM) Reference Guide aims to convey country experiences and good international practices as a basis for decisions on how to address a country-specific PIM reform agenda. The country references are drawn largely from previous diagnostics and technical assistance reports of the World Bank. The application of country diagnostics and assessments has revealed a need to address the following issues when undertaking a country reform in PIM: • Clarification of the definition and scope of public investment and public investment management • Establishment of a sound legal, regulatory, and institutional setting for PIM, making sure it is linked to the budget process • Allocation of roles and responsibilities for key players in PIM across government • Strengthening of guidance on project preappraisal, appraisal, and selection-prioritization procedures and deepening of project appraisal methodologies • Integration of strategic planning, project appraisal-selection, and capital budgeting • Management of multiyear capital budget allocations and commitments • Efforts to address effective implementation, procurement, and monitoring of projects • Strengthening of asset management and ex post evaluation • Integration of PIM and public-private partnership (PPP) in a unified framework • Rationalization and prioritization of the existing PIM project portfolio • Development of a PIM database and information technology in the form of a PIM information system. The PIM Reference Guide does not seek to provide definitive answers or standard guidance for the common PIM issues facing countries. Nor does it seek to provide a detailed template for replication across countries: this would be impossible given the diversity of country situations. Instead, each chapter begins with an overview of the specific reform issue, lists approaches and experiences from different countries, and summarizes the references and good practices to be considered in designing country-specific reform actions.
