This book provides an integrated treatment of blockmodeling, the most frequently used technique in social network analysis. It secures its mathematical foundations and then generalizes blockmodeling for the analysis of many types of network structures. Examples are used throughout the text and include small group structures, little league baseball teams, intra-organizational networks, inter-organizational networks, baboon grooming networks, marriage ties of noble families, trust networks, signed networks, Supreme Court decisions, journal citation networks, and alliance networks. Also provided is an integrated treatment of algebraic and graph theoretic concepts for network analysis and a broad introduction to cluster analysis. These formal ideas are the foundations for the authors' proposal for direct optimizational approaches to blockmodeling which yield blockmodels that best fit the data, a measure of fit that is integral to the establishment of blockmodels, and creates the potential for many generalizations and a deductive use of blockmodeling.

This book introduces multiple criteria and multiple constraint levels linear programming (MC2LP), which is an extension of linear programming (LP) and multiple criteria linear programming (MCLP). In the last decade, the author and a group of researchers from the USA, China, Korea, Germany, and Hungary have been working on the theory and applications of MC2LP problems. This volume integrates their main research results ranging from theoretical bases to broad areas of real world applications. The theoretical bases include the formulation of MC2LP; integer MC2LP and MC2 transportation model; fuzzy MC2LP and fuzzy duality of MC2LP; optimal system designs and contingency plans; MC2 decision support system; and MC2 computer software development. The application areas are accounting, management information systems, production planning, and telecommunications management. The book serves as a seminar text for both undergraduates and graduates who have a linear algebra or equivalent background. For practitioners, it will help in handling LP type problems in multiple decision making environment.

The unique features of stock options have spawned numerous questions over how and when they are taxed, valued, and recorded for financial statement purposes. Disputes also arise over what government entity has jurisdiction to tax them, who

has a legitimate claim to them in death, divorce, and bankruptcy, and whether they can be transferred at all. Until now and the publication of "Stock Options: Estate, Tax, and Financial Planning," the market has not had such comprehensive cradle-to-grave coverage of the tax, estate, and financial issues that can confront a person with stock options. The author was inspired to write the book after her client for whom she had just prepared a 20-year cash flow projection, died suddenly of cancer at the age of 57. He left behind his wife who was a schoolteacher, his two college-bound children -- and four million dollars of unexercised stock options. None of his advisors knew what to do. This able group included his money manager, his lawyer, trust officer, and the human resources administrator at his job. Instead, they all looked to the author, his CPA. There were so many questions and so few answers. Stock Options: Estate, Tax, and Financial Planning provides the answers. In addition, it raises many more questions for which there are no clear answers. It is a comprehensive guide for estate, tax, and financial planners who advise clients about employee stock options, human resources personnel who are presumed to know all about these important benefits, and for insiders who must know these things. Finally, it is also for the inquisitive-minded individual who wants to maximize the value of his or her stock options in a number of different life circumstances.
