This text helps students hit the road with a practical set of tools, and the

confidence they need to use those tools effectively in making business decisions. The goal is to introduce a new Principles of Accounting text that better reflects a more conceptual and decision-making approach to the material. The authors have taken a new "macro- to micro-" approach to the Principles of Accounting course by starting with a discussion of real financial statements first, rather than starting with the Accounting Cycle (although the Accounting Cycle is thoroughly covered in Chapters 3 and 4). The objective is to establish how a financial statement communicates the financing, investing, and operating activities of a business to users of accounting information. They motivate students by grounding the discussion in the real world, showing them the relevance of the topics covered to their future career.

### **ACCOUNTING FOR MANAGERS**

This book starts with a macro view of accounting information by presenting real financial statements. The authors establish how financial statements communicate the financing, operation, and investing activities of a business. To integrate the use of financial statements for decision making, the authors identify a finite set of tools necessary to make business decisions based on financial information. The Decision Toolkit is provided for the reader and integrated throughout the text.
