“What the future fortunes of [Gramsci’s] writings will be, we cannot know. However, his permanence is already sufficiently sure, and justifies the historical study of his international reception. The present collection of studies is an indispensable foundation for this.” —Eric Hobsbawm, from the preface Antonio Gramsci is a giant of Marxian thought and one of the world's greatest cultural critics. Antonio A. Santucci is perhaps the world's preeminent Gramsci scholar. Monthly Review Press is proud to publish, for the first time in English, Santucci’s masterful intellectual biography of the great Sardinian scholar and revolutionary. Gramscian terms such as “civil society” and “hegemony” are much used in everyday political discourse. Santucci warns us, however, that these words have been appropriated by both radicals and conservatives for contemporary and often self-serving ends that often have nothing to do with Gramsci’s purposes in developing them. Rather what we must do, and what Santucci illustrates time and again in his dissection of Gramsci’s writings, is absorb Gramsci’s methods. These can be summed up as the suspicion of “grand explanatory schemes,” the unity of theory and practice, and a focus on the details of everyday life. With respect to the last of these, Joseph Buttigieg says in his Nota: “Gramsci did not set out to explain historical reality armed with some full-fledged concept, such as hegemony; rather, he examined the minutiae of concrete social, economic, cultural, and political relations as they are lived in by individuals in their specific historical circumstances

and, gradually, he acquired an increasingly complex understanding of how hegemony operates in many diverse ways and under many aspects within the capillaries of society.” The rigor of Santucci’s examination of Gramsci’s life and work matches that of the seminal thought of the master himself. Readers will be enlightened and inspired by every page.

Turbo Code Applications: a journey from a paper to realization presents contemporary applications of turbo codes in thirteen technical chapters. Each chapter focuses on a particular communication technology utilizing turbo codes, and they are written by experts who have been working in related areas from around the world. This book is published to celebrate the 10 year anniversary of turbo codes invention by Claude Berrou Alain Glavieux and Punya Thitimajshima (1993-2003). As known for more than a decade, turbo code is the astonishing error control coding scheme which its performance closes to the Shannon’s limit. It has been honored consequently as one of the seventeen great innovations during the first fifty years of information theory foundation. With the amazing performance compared to that of other existing codes, turbo codes have been adopted into many communication systems and incorporated with various modern industrial standards. Numerous research works have been reported from universities and advance companies worldwide. Evidently, it has successfully revolutionized the

Subsequently, it moves up to the air channel applications by employing to wireless communication systems, and then rises up to the space by using in digital video broadcasting and satellite communications. Social media is said to radically change the way in which public communication takes place: information diffuses faster and can reach a large number of people, but what makes the process so novel is that online networks can empower people to compete with traditional broadcasters or public figures. This book critically interrogates the contemporary relevance of social networks as a set of economic, cultural and political enterprises and as a public sphere in which a variety of political and socio-cultural demands can be met. It examines policy, regulatory and socio-cultural issues arising from the transformation of communication to a multi-layered sphere of online and social networks. The central theme of the book is to address the following questions: Are online and social networks an unstoppable democratizing and mobilizing force? Is there a need for policy and intervention to

ensure the development of comprehensive and inclusive social networking frameworks? Social media are viewed both as a tool that allows citizens to influence policymaking, and as an object of new policies and regulations, such as data retention, privacy and copyright laws, around which citizens are mobilizing.

RICH DAD, POOR DAD: WHAT THE RICH TEACH THEIR KIDS ABOUT MONEY -THAT THE POOR AND MIDDLE CLASS DO NOT.

This book, a first in its kind, offers a survey of the present state of affairs in media accessibility research and practice. It focuses on professional practices which are relative newcomers within the field of audiovisual translation and media studies, namely, audio description for the blind and visually impaired, sign language, and subtitling for the deaf and the hard-of-hearing for television, DVD, cinema, internet and live performances. Thanks to the work of lobbying groups and the introduction of legislation in some countries, media accessibility is an area that has recently

gained marked visibility in our society. It has begun to appear in university curricula across Europe, and is the topic of numerous specialised conferences. The target readership of this book is first and foremost the growing number of academics involved in audiovisual translation at universities ? researchers, teachers and students ? but it is also of interest to the ever-expanding pool of practitioners and translators, who may wish to improve their crafts. The collection also addresses media scholars, members of deaf and blind associations, TV channels, and cinema or theatre managements who have embarked on the task of making their programmes and venues accessible to the visually and hearing impaired.

Television as we knew it is irrevocably changing. Some are gleefully announcing the death of television, others have been less sanguine but insist that television is radically changing underneath our eyes. Several excellent publications have dealt with television's uncertain condition, but few have taken the specific question of what television's transformations mean for the discipline of Television Studies as a starting point. The essays collected in this volume aim to fill this void. Two fundamental questions string the various contributions together. First, is television really in crisis or is the present not so extraordinary when revisiting television's development? Second, should we invent new theoretical concepts or are our old ones still perfectly relevant? To answer such questions the authors in this volume take up diverse case studies, ranging from the academic series Reading Contemporary Television to Flemish Fiction, from nostalgic programming on broadcast television to YouTube, from tell-sell television shows to public television

A hands-on guide to using R to carry out key statistical practices in educational and behavioral sciences research Computing has become an essential part of the day-to-day practice of statistical work, broadening the types of questions that can now be addressed by research scientists applying newly derived data analytic techniques. Comparing Groups: Randomization and Bootstrap Methods Using R emphasizes the direct link between scientific research questions and data analysis. Rather than relying on mathematical calculations, this book focus on conceptual explanations and the use of statistical computing in an effort to guide readers through the integration of design, statistical methodology, and computation to answer specific research questions regarding group differences. Utilizing the widely-used, freely accessible R software, the authors introduce a modern approach to promote methods that provide a more complete understanding of statistical concepts. Following an introduction to R, each chapter is driven by a research question, and empirical data analysis is used to provide answers to that question. These examples are data-driven inquiries that promote interaction between statistical methods and ideas and computer application. Computer code and output are interwoven in the book to illustrate exactly how each analysis is carried out and how output is interpreted. Additional topical coverage includes: Data exploration of one variable and multivariate data Comparing two groups and many groups Permutation tests, randomization tests, and the independent samples t-Test Bootstrap tests and bootstrap intervals Interval estimates and effect sizes

Throughout the book, the authors incorporate data from real-world research studies as well as chapter problems that provide a platform to perform data analyses. A related Web site features a complete collection of the book's datasets along with the accompanying codebooks and the R script files and commands, allowing readers to reproduce the presented output and plots. Comparing Groups: Randomization and Bootstrap Methods Using R is an excellent book for upper-undergraduate and graduate level courses on statistical methods, particularly in the educational and behavioral sciences. The book also serves as a valuable resource for researchers who need a practical guide to modern data analytic and computational methods.

inspirational and empowering true stories of what happens when we commit intentional acts of generosity. Master storyteller Debbie Macomber knows a secret. In a world that seems too often reticent and begrudging, Debbie has learned firsthand that living in a spirit of generosity yields unforeseen miracles. Lives can be changed in ways we never envisioned. Just as a young boy volunteered his fishes and loaves to Jesus in Galilee and saw his meager gift multiplied many times over to feed five thousand, we can live open-handed and stand amazed at what God accomplishes through simple acts of generosity. This moving blend of true stories and motivating messages delights and surprises us as we see for ourselves that giving the gifts of time, encouragement, hope, laughter, prayer, hospitality, service, and forgiveness often have a life-changing impact, not only on the recipient of such gifts, but on the giver as well. All it takes is one simple act. Macomber, through her masterful power of storytelling, calls us to live with an open heart, offering who we are and what we have to God, to use in the lives of others. When we do so with an eager sense of expectancy, lives—including our own—are changed in ways we couldn't have imagined.

Its parts provide together a broad picture of opposing trends and tensions in media convergence, by underlining the relevance of this powerful idea and emphasizing the misconceptions that it has generated. Sergio Sparviero, Corinna Peil, Gabriele Balbi and the other authors look into practices and realities of users in convergent media environments, ambiguities in the production and distribution of content, changes to the organization of media industries, the re-configuration of media markets, and the influence of policy and regulations. International supermodel Cindy Crawford chronicles her life and career, sharing stories and lessons learned, and featuring her most memorable images in this New York Times bestseller. Cindy Crawford was the cornerstone of the golden age of the supermodel in the 1990s. She blazed a trail during that decade, seamlessly moving between the runway to unconventional outlets, such as cutting-edge MTV, Super Bowl commercials, and even Playboy magazine. On the eve of her fiftieth birthday, Crawford looks back, photo shoot by photo shoot, on a remarkable career and various life lessons she absorbed. She discusses her earliest modeling years and learning how to become less self-conscious in front of a camera; trusting her own instincts about creating positive messages about a healthy and strong body image that she knew would reach women of all ages; her feelings about becoming a wife and a mother; and her thoughts about turning fifty and what she would tell her younger self if she had the chance. The photographs span her entire career, beginning from the mid 1980s, and feature unpublished images from Crawford's personal archive in addition to images by every top name in fashion photography, including Annie Leibovitz, Arthur Elgort, Helmut Newton, Herb Ritts, Irving Penn, Patrick Demarchelier, and Richard Avedon, among others. A beautifully illustrated series of stories, *Becoming* is a smart and engaging book that sheds light into the life and work of an extraordinary woman.
