The Bench Book is designed to provide NLRB judges with a reference guide during trials when other resources are unavailable. However, it is also a useful tool for all trial practitioners before the Board. It represents an effort to set forth Board precedent and other rulings and authorities on certain recurring procedural and evidentiary issues that may arise during an NLRB trial. It is not a digest of substantive law. Nor should it be cited as precedent, or be considered a substitute for issue-specific research. The Bench Book includes references to unpublished Board orders, unappealed administrative law judges' decisions, and other Board documents that are not binding precedent. It also includes citations to some of the two-Member Board decisions that issued from January 1, 2008-March 29, 2010, and the recess-Board decisions that issued from January 4, 2012-August 4, 2013. Note that this edition of the Bench Book includes a number of organizational changes from previous editions. The most significant change is to former Chapter 13 (now Chapter 16) on

Evidence. The chapter is now organized in the same way as the FRE, and follows the same numbering system, so that the federal rules and treatises on evidence can be cross-referenced more easily. Another significant change is that former Chapter 11 on Miscellaneous Procedural Matters has been deleted. The matters addressed there have been placed in other chapters, including four new chapters on Motions and Special Appeals (Chapter 10), The Hearing Record (Chapter 12), Board Precedent and Relitigation of Issues (Chapter 13), and Supplemental or Related Proceedings (Chapter 14).

The five volume set CCIS 224-228 constitutes the refereed proceedings of the International conference on Applied Informatics and Communication, ICAIC 2011, held in Xi'an, China in August 2011. The 446 revised papers presented were carefully reviewed and selected from numerous submissions. The papers cover a broad range of topics in computer science and interdisciplinary applications including control, hardware and software systems, neural computing, wireless networks, information systems, and image processing.

This book provides a practical study of modern heat pipe engineering, discussing how it can be optimized for use on a wider scale. An introduction to operational and design principles, this book offers a review of heat and mass transfer theory relevant to performance, leading into and exploration of the use of heat pipes, particularly in high-heat flux applications and in situations in which there is any combination of non-uniform heat loading, limited airflow over the heat generating components, and space or weight constraints. Key implementation challenges are tackled, including load-balancing, materials characteristics, operating temperature ranges, thermal resistance, and operating orientation. With its presentation of mathematical models to calculate heat transfer limitations and temperature gradient of both high- and low-temperature heat pipes, the book compares calculated results with the available experimental data. It also includes a series of computer programs developed by the author to support presented data, aid design, and predict performance.

Did you child just get hearing aids?Is your child feeling self-conscience about their hearing loss?Bessie Needs Hearing Aids" is a children's book

that will help children with hearing loss understand the process, and that they are not alone. Written and illustrated by a teenage girl who went through this process, so it will resonate with children just learning of hearing issues, or coping with wearing hearing aids. The book received numerous accolades so it was decided to make it available to all, in order to possibly help other children with hearing loss. When a child goes through the process of getting hearing aids, it is scary for them and difficult for a parent to explain. This is a story of Bessie, the bunny, who was so excited to start school only to have the kids get frustrated that she was not hearing them properly. Bessie visits the audiologist and learns about hearing aids and the happy results of getting hear aids.

This interdisciplinary Handbook combines both mainstream and heterodox economics to assess the nature, scope and importance of leisure activities. Surprisingly, the field of leisure economics is not, thus far, a particularly integrated or coherent one. In this Handbook a wide ranging body of international scholars get to grips with the core issues, taking in the traditional income/leisure choice model of textbook microeconomics and Becker's allocation of time model along the way. They expertly apply economics to some usually neglected topics, such as boredom and sleeping, work-life balance, dating, tourism, health and fitness, sport, video games, social networking, music festivals and sex. Contributions from further afield by Veblen, Sctivosky and Bourdieu

also feature prominently. Applying a mix of both theoretical and empirical data, undergraduate students in modules on sport/leisure economics as well as sport/leisure management will find this important resource invaluable.

Oscillators have traditionally been described in books for specialist needs and as such have suffered from being inaccessible to the practitioner. This book takes a practical approach and provides much-needed insights into the design of oscillators, the servicing of systems heavily dependent upon them and the tailoring of practical oscillators to specific demands. To this end maths and formulae are kept to a minimum and only used where appropriate to an understanding of the theory. Once grasped, the theory of the general oscillator is easily put into practical use in actual oscillators. The final two chapters present a collection of oscillators from which the practising engineer or the hobbyist can obtain useful guidance for many kinds of projects. Irving Gottlieb is a leading author of many books for practising engineers, technicians and students of electronic and electrical engineering. First Newnes title by this best-selling author Clarity and crispness in an often obscure field

The previously untold story of the Zenith Trans-Oceanic, the world's most romantic and expensive series of portable radios. Long a companion of kings, presidents, transoceanic yachtsmen and world explorers, the Trans-Oceanic was also carried into battle by American troops in three wars. Its great popularity in spite of a very high price can be laid at the feet of several generations of armchair travelers who used the shortwave capabilities of the Trans-Oceanic as a window on the world. With access to the Zenith corporate archives and their long experience as radio enthusiasts and writers for both the popular and scholarly press, Professors Bryant and Cones present the engrossing stories of the development and use of the Trans-Oceanic throughout its forty year life. They present a wealth of never-before published photographs, documents and information concerning these fascinating radios, their collection, preservation and restoration.

Does boxing teach anything besides how to club someone into submission? Can it transcend its sordid reputation and instill love, compassion and honor in Americas most troubled kids? In this raw yet uplifting memoir about amateur boxing, author Peter Wood tells of his begrudging return to a world he thought hed left behind. He steps back into the mud of boxing, coaching two troubled teens who dreamas he once didof becoming Golden Gloves champions.His compelling story moves far beyond the grunt and sweat of the local gym. It explores the classrooms of a suburban high school and digs through the remains of unhappy childhoods. Its a story about how boxing is a way out, and how it cleanses the soul.This book brings the subculture of amateur boxing up close and weaves a powerful story of redemption, beating demons and battling for glory.

The post-9/11 world has witnessed a rebirth of

irregular and asymmetrical warfare, which, in turn, has led to an increase in conflicts between conventional armies and non-state armed groups. In their haste to respond to the threat from insurgencies, nations often fail to plan effectively not only for combat operations but also for withdrawal, which is inevitable, win or lose. In order to answer the question of how to withdraw from engagement with an insurgency, Gleis examines how insurgencies are conducted and what, if anything, is unique about an Islamist insurgency. He then proposes ways to combat these groups successfully and to disentangle one's military forces from the war once strategic objectives have been met—or once it is clear that they cannot be. Because this type of warfare is dynamic and ever-changing, this book is not meant to suggest a set of cookie-cutter solutions for how to withdraw from insurgencies. Rather, the author analyzes six counterinsurgency operations that have taken place in the past, with the intention of gleaning from them as many lessons as possible to better prepare for future withdrawals. The literature on how wars end has failed to explore irregular warfare. This much needed reexamination serves as an indispensable starting point.

### **Apti Course 427**

Providing examples of applications, this handbook examines the underlying technology of each type of power vacuum tube device in common use today. The author reports on new development efforts and explains the benefits of specific work. Basic principles

are discussed, and supporting mathematics are included to clarify the material presented. Extensive technical illustrations and schematic diagrams aid the reader in understanding the maxims of the subject.

**What's New in the Second Edition?** Reviews the latest in new vacuum tube technology - new devices and refinements of existing devices that extend power and frequency capabilities Identifies new applications for commercial and scientific research Examines new frontiers on materials science - directly impacting construction, reliability, and performance Outlines new methods of power tube design - yielding more efficient, lasting tubes Describes new modulation methods affecting power tube design and application, including digital technologies
