50 Trailblazers of the 50 States

A comprehensive textbook that encompasses the full range of material covered in undergraduate courses in Structures in departments of Civil and Mechanical Engineering. The approach taken aims to integrate a qualitative approach - looking at the physical reality of phenomena - with a quantitative approach - one that models the physical reality mathematically. An innovative introductory chapter looks at different types of structures - from the commonplace, such as chairs and aeroplanes, and the historically significant, such as the Pont du Gard in southern France, through to modern and novel structures such as the Bank of China building in Hong Kong - with a view to enthusing the reader into further study.

Stress of either psychological or physical nature can activate and/or paralyse humans' innate and adaptive immunity. However, adequate immunity is crucial to the maintenance of health on earth and in space. During space flight, human physiology and health are challenged by complex environmental stressors which might be at their most pronounced during lunar or interplanetary missions. While previous publications have addressed the physiological changes that occur during space flight, this book goes further, by adopting an interdisciplinary approach to analyze the complex interaction of living conditions in space, the immune system, and astronauts' health. It is explained how such analysis of the consequences of stress for the immune system may help in preventing, diagnosing, and counteracting immune-related alterations in health on earth as well as in space

"Holding brain science in one hand and rich emotional presence in the other, this book feels timely and necessary."--Shauna Niequist, New York Times bestselling author of Present Over Perfect Why is there such a gap between what you want to do and what you actually do? The host of Ask Science Mike explains why our desires and our real lives are so wildly different--and what you can do to close the gap. For thousands of years, scientists, philosophers, and self-help gurus have wrestled with one of the basic conundrums of human life: Why do we do the things we do? Or, rather, why do we so often not do the things we want to do? As a podcast host whose voice goes out to millions each month, Mike McHargue gets countless emails from people seeking to understand their own misbehavior--why we binge on Netflix when we know taking a walk outside would be better for us, or why we argue politics on Facebook when our real friends live just down the street. Everyone wants to be a good person, but few of us, twenty years into the new

millennium, have any idea how to do that. In *You're a Miracle (and a Pain in the Ass)*, McHargue addresses these issues. We like to think we're in control of our thoughts and decisions, he writes, but science has shown that a host of competing impulses, emotions, and environmental factors are at play in every action we undertake. Touching on his podcast listeners' most pressing questions, from relationships and ethics to stress and mental health, and sharing some of the biggest triumphs and hardships from his own life, McHargue shows us how some of our qualities that seem most frustrating--including "negative" emotions like sadness, anger, and anxiety--are actually key to helping humans survive and thrive. In doing so, he invites us on a path of self-understanding and, ultimately, self-acceptance. *You're a Miracle (and a Pain in the Ass)* is a guided tour through the mystery of human consciousness, showing readers how to live more at peace with themselves in a complex world.

Rapunzel's prince comes to rescue his cats. The Little Mermaid does not follow a prince onto land--she gives up sea life for an aloof orange cat. In this charming collection, classic fairy tales are whimsically interpreted through the Cat Versus Human lens. *Cat Versus Human: Fairy Tails* is a themed collection of hilarious, endearing comics from creator Yasmine Surovec. Fabled characters and fairy princesses are replaced with cat ladies and gents and cats. Each comic puts a

House cleaning has been an innate human activity forever but only since the early 19th century have mechanical devices replaced the physical labor (performed mostly by women). Mechanical carpet sweepers were replaced by manual suction cleaners, which in turn were replaced by electric vacuum cleaners in the early 20th century. Innovative inventors, who improved vacuum cleaners as electricity became commonly available, made these advances possible. Many early

manufacturers failed, but some, such as Bissell, Hoover, Eureka and others, became household names as they competed for global dominance with improved features, performance and appearance. This book describes the fascinating people who made this possible, as well as the economic, cultural and technological contexts of their times. From obscure beginnings 200 years ago, vacuum cleaners have become an integral part of modern household culture.

An inspiring story about what happens when 3,500 acres of land, farmed for

centuries, is left to return to the wild, and about the wilder, richer future a natural landscape can bring. For years Charlie Burrell and his wife, Isabella Tree, farmed Knepp Castle Estate and struggled to turn a profit. By 2000, with the farm facing bankruptcy, they decided to try something radical. They would restore Knepp's 3,500 acres to the wild. Using herds of free-roaming animals to mimic the actions of the megafauna of the past, they hoped to bring nature back to their depleted land. But what would the neighbors say, in the manicured countryside of modern England where a blade of grass out of place is considered an affront? In the face of considerable opposition the couple persisted with their experiment and soon witnessed an extraordinary change. New life flooded into Knepp, now a breeding hotspot for rare and threatened species like turtle doves, peregrine falcons, and purple emperor butterflies. The fabled English nightingale sings again. At a time of looming environmental disaster, Wilding is an inspiring story of a farm, a couple, and a community transformed. Isabella Tree's wonderful book brings together science, natural history, a fair bit of drama, and—ultimately—hope.

This new, corpus-driven approach to the study of language and style of literary texts makes use of the Dickens' 4.6 million-word corpus for a detailed examination of patterns of lexical collocations. It offers new insights into Dickens' linguistic innovation, together with a nuanced understanding of his use of language to achieve stylistic ends. At the centre of the study is a close analysis of the two narratives in *Bleak House*, read as a focal point for consideration of Dickens' stylistic development through his whole writing life.

This book discusses the physics of the dynamics of ions in various ionically conducting materials, and applications including electrical energy generation and

storage. The experimental techniques for measurements and characterization, molecular dynamics simulations, the theories of ion dynamics, and applications are all addressed by the authors, who are experts in their fields. The experimental techniques of measurement and characterization of dynamics of ions in glassy, crystalline, and liquid ionic conductors are introduced with the dual purpose of introducing the reader to the experimental activities of the field, and preparing the reader to understand the physical quantities derived from experiments. These experimental techniques include calorimetry, conductivity relaxation, nuclear magnetic resonance, light scattering, neutron scattering, and others. Methods of molecular dynamics simulations are introduced to teach the reader to utilize the technique for practical applications to specific problems. The results elucidate the dynamics of ions on some issues that are not accessible by experiments. The properties of ion dynamics in glassy, crystalline and liquid ionic conductors brought forth by experiments and simulations are shown to be universal, i.e. independent of physical and chemical structure of the ionic conductor as long as ion-ion interaction is the dominant factor. Moreover these universal properties of ion dynamics are shown to be isomorphic to other complex interacting systems including the large class of glass-forming materials with or without ionic conductivity. By covering the basic concepts, theories/models, experimental techniques and data, molecular dynamics simulations, and relating them together, Dynamics of Glassy, Crystalline and Liquid Ionic Conductors will be of great interest to many in basic and applied research areas from the broad and diverse

communities of condensed matter physicists, chemists, materials scientists and engineers. This 1904 book is a loving testament to the power of food-inspired memory, while being evocative of the sights, smells, and tastes of Kentucky in the 1900s. Most importantly, the book was groundbreaking, over one hundred years ago, in its celebration of the vital role Black women played in building and sustaining the tradition of Southern cooking and Southern hospitality. It is full of authentically regional Kentucky recipes. While brain croquettes may not be on everyone's menu today, there are few who can resist the 10 variations on corn bread, or the multiplicity of recipes for biscuits, or the wealth of ice cream flavors and desserts.

Prefabrication offers a simple path to the green home of your dreams, and in her latest book, *Prefabulous* author Sheri Koones highlights the many ways of using prefabrication to create almost-off-the-grid homes—houses that are not only environmentally friendly but often operate at nearly zero annual energy cost. Taking energy from the grid when necessary and returning any excess energy produced, almost-off-the-grid homes function on a fraction of the energy required by most houses, and additionally are more comfortable, healthier, quieter inside, and far cheaper to operate. As energy costs continue to rise, the almost-off-the-grid house proves its worth. *Prefabulous + Almost Off the Grid* profiles more than 30 of the most energy-efficient homes in the United States, and this hardworking guide reveals how homeowners can achieve similar results with floor plans, the latest, most efficient technologies, and multiple images of the exterior and interior of each home. Praise for *Prefabulous + Almost Off the Grid*: Recipient of the 2013 Robert Bruss Gold Book Award from the National Association of Real Estate Editors (NAREE) “You can build a high quality, environmentally friendly and efficient home at a reasonable price with a look and feel of a traditional home. Advancements like those used in our house and the other houses in this book will transform the homebuilding industry.” —Christine Todd Whitman, former governor of New Jersey and administrator of the Environmental Protection Agency “The time has come to throw out the old stereotypes and to embrace prefab building techniques as the way of the future—and the best approach for today. Prefabulous + Almost Off the Grid is an enlightening guide on using prefab to create your own affordable, energy-efficient home.” —Bruce Ratner, chairman and chief executive of the Forest City Ratner Companies “Sheri Koones highlights the many ways of using prefabrication to create almost-off-the-grid homes that are not only environmentally friendly but often operate at nearly zero annual energy cost. . . . This is an easy-on-the-eyes guide that includes floor plans and multiple images of the exterior and interior of each home. It is not a manual for green construction, but a general overview of aspects of prefab and green construction. And it does that well.” —Natural Life magazine “If you're ready to do something about your energy dependence, or if you enjoy stories of people who've bucked the trends, you owe it to yourself to give Prefabulous + Almost Off the Grid a look. Beautifully illustrated, it ends with a great resources list for the homes showcased.” —Examiner.com “Indispensable guide to creating the ideal, almost-off-the-grid home. . . . This text is both timely and tempting to anyone interested in inhabiting a more comfortable and cost-efficient abode.” —Bask “This attractive coffee-table-style book, the third in Koones's Prefabulous series, features 32 prefabricated houses that, to a greater or lesser extent, boast environmentally friendly, efficient, and renewable-energy elements.” —Publishers Weekly

accessible; promotes a corporate culture that encourages creativity among its employees; and takes its role as a corporate citizen very seriously, investing in green initiatives and developing the largest corporate foundation in the United States. Following in the footsteps of Warren Buffett Speaks and Jack Welch Speaks—which contain a conversational style that successfully captures the essence of these business leaders—Google Speaks reveals the amazing story behind one of the most important new companies of our time by exploring the people and philosophies that have made it a global phenomenon in less than fifteen years. Written by bestselling author Janet Lowe, this book offers an engaging look at how Google's founders, Sergey Brin and Larry Page, transformed their vision of a better Internet search engine into a business colossus with about \$16 billion in annual revenue. Lowe discusses the values that drive Brin and Page—for example, how they both live fairly modest lives, despite each having a net worth in excess of \$15.9 billion—and details how they have created a culture that fosters fun while, at the same time, keeping Google at the forefront of technology through relentless R&D investments and imaginative partnerships with organizations such as NASA. In addition to examining Google's breakthrough business strategies and new business models—which have transformed online advertising and changed the way we look at corporate responsibility and employee relations—Lowe explains why Google may be a harbinger of where corporate America is headed. She also addresses controversies surrounding Google, such as copyright infringement, antitrust concerns, and personal privacy and poses the
