A Common Language for Electrical Engineering

Enter a world behind the flashing light, enticing sounds and mind washing falsehoods the marketing world would have you believe is a glamorous fan fair where the poor become rich and famous. To a more realistic world behind the fashionable hype that is built around the lives of gambling, drinking and smoking in a way like most of us have never seen before. To experience a side of life that is rarely seen by others who are not personally affected by those under the spell of drinking, gambling and smoking by the one and only which that habit produces.

The School of Heart Knocks

"If you believe that the broad aim of clinical instruction is about teaching medical procedures, you're wrong. Whether an attending, a faculty member, or a another type of clinical instructor, believing this can hinder the learning process." Even though UMI published the first edition nearly two decades ago, Gary DePaul's research findings and implications are even more relevant today. From interviews with family-practice specialists from the Carle Clinic Association, Dr. DePaul discovered certain training techniques to be more effective at building specialty-interest area expertise while responsibly protecting patient safety and care. In addition, he discovered how a three-way, interlocking dilemma influences how specialists develop their specialty-interest area. The Princess Dehra

Eric Dollard is a legendary electrical engineer trained by RCA, Bell Labs and the US Navy. He is the only man alive to have successfully replicated Nikola Tesla's wireless electricity technology and is considered to be the modern living Tesla. Because of his contribution to electrical science and his advancements in a Tesla-Alexanderson type of Advanced Seismic Warning System, the Federal Government's documents in relation to this project refer to him as Dr. Eric Dollard, which confers to him an honorary PhD. His fans lovingly refer to him as Professor Dollard. The Lone Pine Writings (Part 1) and its content was developed out of the

general frustration of the author when trying to teach others about his work in electrical engineering. This collection of papers started appearing in discussion threads on Energetic Forum around 2011. At the time, Eric Dollard was living in his famous 1980 Toyota Corolla, in the harsh wastelands of Lone Pine, California. Originally, Eric wrote the material out on paper and mailed it to a colleague who transcribed the material and posted it in the forums under the pseudonym "T-REX." Each paper or letter was called a "transmission" in honor of the language of a radio operator and contained information on specific electrical engineering terms and how they are to be used. The original format of the material is retained in this edition of the book. The phenomena we call "electricity" is a dynamic, but artificial presentation of the Natural World, and because of this, its behavior follows specific rules. Understanding these specific behaviors is the key to engineering this phenomena, but developing a common language with which to describe these behaviors is the key to teaching others these engineering skills. The purpose of this book is to provide clarity for the electrical engineering community regarding the use of common terms for electrical units. The last attempt to standardize this language was made by Oliver Heaviside over 100 years ago and his effort was met by censure from the Royal Society of London. It is hoped that the release of this book will be met with a more enlightened response. Peter A. Lindemann, D.Sc. Editor, A & P Electronic Media A portion of the proceeds will go to EPD Laboratories, Inc., a 501(c)3 tax-deductible non-profit corporation that supports Eric Dollard in advancing the electrical sciences.
