Noelle does what any good Southern girl would do: she flicks a wrist to clean up the mess, then thanks the stars for doing the world a favor. But that's just the beginning. She has the Magical Oversight Committee on her back because she can't keep her unruly little sister in line and the hunky new city-slicker sheriff would like to take her to dinner, except he suspects her of murder. To top it off, her possessed miniature donkey is being particularly calamitous and the old hens at the local beauty parlor are laying bets on her love life. A skydiving best friend and a bossy, living-impaired aunt become the least of her worries when the killer decides to bump up the plan by bumping her off. Can she figure it out in time to save all that she holds dear, or will Noelle be next on the list of folks who've turned up dead? If you like laugh-out-loud southern wit, magic, and murder, you'll fall in love with this witchy cozy mystery series!

While most children learn to read fairly well, there remain many young Americans whose futures are imperiled because they do not read well enough to meet the demands of our competitive, technology-driven society. This book explores the problem within the context of social, historical, cultural, and biological factors. Recommendations address the identification of groups of children at risk, effective instruction for the preschool and early grades, effective approaches to dialects and bilingualism, the importance of these findings for the professional development of teachers, and gaps that remain in our understanding of how children learn to read.

Implications for parents, teachers, schools, communities, the media, and government at all levels are discussed. The book examines the epidemiology of reading problems and introduces the concepts used by experts in the field. In a clear and readable narrative, word identification, comprehension, and other processes in normal reading development are discussed. Against the background of normal progress, *Preventing Reading Difficulties in Young Children* examines factors that put children at risk of poor reading. It explores in detail how literacy can be fostered from birth through kindergarten and the primary grades, including evaluation of philosophies, systems, and materials commonly used to teach reading.

A Wrinkle in Time is the winner of the 1963 Newbery Medal. It was a dark and stormy night—Meg Murry, her small brother Charles Wallace, and her mother had come down to the kitchen for a midnight snack when they were upset by the arrival of a most disturbing stranger. Design doesn't have to be complicated, which is why this guide to human-centered design shows that usability is just as important as aesthetics. Even the smartest among us can feel inept as we fail to figure out which light switch or oven burner to turn on, or whether to push, pull, or slide a door. The fault, argues this ingenious -- even liberating -- book, lies not in ourselves, but in product design that ignores the needs of users and the principles of cognitive psychology. The problems range from ambiguous and hidden controls to arbitrary relationships between controls and functions, coupled with a lack of feedback or other assistance and

unreasonable demands on memorization. The Design of Everyday Things shows that good, usable design is possible. The rules are simple: make things visible, exploit natural relationships that couple function and control, and make intelligent use of constraints. The goal: guide the user effortlessly to the right action on the right control at the right time. The Design of Everyday Things is a powerful primer on how -- and why -- some products satisfy customers while others only frustrate them.

Although perhaps the world's best known athlete, Cassius Clay (Muhammad Ali) was far more important as an American phenomenon of the 1960's than as a prizefighter. In his career as a boxer, he followed a traditional, even a stereotyped road to the top for an African American, but his distortion of the American rags-to-riches story is peculiarly his own. When he defeated Sonny Liston for the world's heavyweight championship in 1964, he was hailed by press and public alike as the clean-cut kid who would, by his exemplary life, restore wholesomeness to the tainted world of boxing. Three years later, he has made a hash of these earlier impressions. His affair with the Black Muslims, his outspoken support of black power, his inflammatory statements about Vietnam and his controversial draft status have all contributed to the vilification to which he is currently subjected. Olsen talked at length with those who surrounded Clay – his family, his first boxing

National interests in greater energy independence, concurrent with favorable market forces, have driven increased production of corn-based ethanol in the United States and research into the next generation of biofuels. The trend is changing the national agricultural landscape and has raised concerns about potential impacts on the nation's water resources. To help illuminate these issues, the National Research Council held a colloquium on July 12, 2007 in Washington, DC. Water Implications of Biofuels Production in the United States, based in part on discussions at the colloquium, concludes that if projected future increases in use of corn for ethanol production do occur, the increase in harm to water quality could be considerable from the increases in fertilizer use, pesticide use, and soil erosion associated with growing crops such as corn. Water supply problems could also develop, both from the water needed to grow biofuels crops and water used at ethanol processing plants, especially in regions where water supplies are already overdrawn. The production of "cellulosic ethanol," derived from fibrous material such as wheat straw, native grasses, and forest trimmings is expected to have less
