The first Rolls-Royce armoured car was a privately owned vehicle fitted with a machine-gun and a limited amount of armour plate, used by the Royal Naval Air Service in Flanders in 1914. By 1915, nearly 100 had been built and turned over to the Army. From then on, as Sir Albert Stern said 'They searched the world for war', operating as far apart as the northwest frontier of India, the Middle East and southern Africa. The cars were fast, quiet and reliable but above all powerful. 'A Rolls in the desert is above rubies,' said Lawrence of Arabia. After World War I, the War Office continued to produce the Rolls-Royce while tinkering with the design. These further cars served all across the Empire, including in Ireland and even later Shanghai, returning for a final brief appearance in the early stages of World War II. This book tells the complete story of the Rolls-Royce Armoured Car, following its design and development as it fought from theatre to theatre during World War I and the turbulent inter-war years.

I Ching was among "the five classics" edited by Confucius, and the philosopher is reputed to have wished for fifty more years of life to study it. The Book of Changes, as it is known in the Western world, dates back to before 1,000 B.C. and ranks among the most important works in the history of Chinese culture. The ancient text has provided inspiration to countless spiritual seekers of many persuasions. One of the few divination manuals to survive into modern times, I Ching is of enormous significance to the history of religions and philosophy. Its profound influence extends to the worlds of business, psychoanalysis, literature, and art. This volume is the standard English translation by the great Sinologist James Legge, prepared for the series Sacred Books of the East. It contains the basic text attributed to King Wan and his son, the Duke of Chou, Appendixes usually ascribed to Confucius, an informative Preface by Legge, and extensive footnotes.

Triumph Spitfire, 1962-1981

In nine eventful years - 1957 to 1965 - the six-cylinder-engined Austin Healey evolved into a formidable and increasingly specialised rally car. By any standards, it was the first of the "homologation specials" - a type made progressively stronger, faster, more versatile, and more suitable for the world's toughest International rallies. Though the motorsport foundations had been laid by the Healey Motor Co. Ltd, the work needed to turn these cars into rock-solid 210bhp projectiles was almost all completed by the world-famous "works" BMC Competitions Department at Abingdon. It was because of their vast experience that the "Big Healeys" as they were always affectionately known - became fast and tough, nimble yet durable, so that they were capable of winning major events wherever traction could be assured. Not only did the "works" Austin Healeys win some of the world's most famous events - including Liege-Sofia-Liege, Spa-Sofia-Liege and the French and Austrian Alpine rallies, but they were also supremely fast on events like the Tulip, and came so close, so often, to winning their home event, the British RAC Rally, which traditionally ended the season. Not only did these cars turn their drivers - Pat Moss, Donald Morley, Rauno Aaltonen, Timo Makinen and Paddy Hopkirk among them - into heroes, but individual cars seemed to take on a character and reputation of their own. This book lists each and every success, each and every notable car, and traces exactly how the machinery developed, and improved, from one season to the next. Over time, the "works" cars not only adopted aluminium cylinder heads and body panels, much-modified chassis,

transmission and exhaust systems, but they also became supremely strong and could withstand a true battering on the world's toughest events. This book relates how the cars were improved by the engineers, how the drivers came to love their heavy and sometimes self-willed steeds, and how the management team got the most out of everything - machinery, personnel, drivers, and regulations. . Heavily illustrated and packed with technical detail this book will make a welcome addition to any motorsport fans library.

Finally, a rebuild and performance guide for GM 6.2 and 6.5L diesel engines! In the late 1970s and early 1980s, there was considerable pressure on the Detroit automakers to increase the fuel efficiency for their automotive and light-truck lines. While efficient electronic engine controls and computer-controlled gas engine technology was still in the developmental stages, the efficiency of diesel engines was already well documented during this time period. As a result, General Motors added diesel engine options to its car and truck lines in an attempt to combat high gas prices and increase fuel efficiency. The first mass-produced V-8 diesel engines of the era, the 5.7L variants, appeared in several General Motors passenger-car models beginning in 1978 and are often referred to as the Oldsmobile Diesels because of the number of Oldsmobile cars equipped with this option. This edition faded from popularity in the early 1980s as a result of falling gas prices and quality issues with diesel fuel suppliers, giving the cars a bad reputation for dependability and reliability. The 6.2L appeared in 1982 and the 6.5L in 1992, as the focus for diesel applications shifted from cars to light trucks. These engines served faithfully and remained in production until 2001, when the new Duramax design replaced it in all but a few military applications. While very durable and reliable, most of these engines have a lot of miles on them, and many are in need of a rebuild. This book will take you through the entire rebuild process step by step from diagnosis to tear down, inspection to parts sourcing, machining, and finally reassembly. Also included is valuable troubleshooting information, detailed explanations of how systems work, and even a complete Stanadyne DB2 rebuild section to get the most out of your engine in the modern era. If you have a 6.2, or 6.5L GM diesel engine, this book is a must-have item for your shop or library.
