"A self study educational program for retraining the mind that is spiritual, rather than religious, in its perspective. Although the Course uses Christian terminology, it expresses a universal experience, and its underlying ontology is reminiscent of ancient refrains, echoing the world's most hallowed traditions."--]cFrom publisher's description.

USAF Flight Test Engineering Manual

Mineral Reference Manual

Single Variable Calculus Student Solutions Manual

In the late 1940s and early 50s, planes flew higher and faster than anyone had dreamed possible. The jet age had arrived, and along with it came turbojet and rocket-powered aircraft capable of flying beyond the speed of sound. To assess these aircraft, the Air Research and Development Command developed a series of data reduction methods, and then compiled them in this Flight Test Engineering Manual. It served as a standard technical reference for the flight test engineers, program managers, pilots and support teams for many of the X-plane programs of the 1950s. This reprint represents the first time in over fifty years that this book has been available, and the first time it has ever been made available to the public. It's a unique time capsule that provides insight into the era of 'The Right Stuff', when slide rules and punch cards were the cutting edge, and a must-have for anyone interested in the technical aspects of flight test.

Biomedical Aspects of Manual Wheelchair Propulsion

Experimental Psychology: Quantitative experiments: pt. 1. Students' manual. pt. 2. Instructor's manual

Mobility is fundamental to health, social integration and individual well-being of the human being. Henceforth, mobility must be viewed as being essential to the outcome of the rehabilitation process of wheelchair dependent persons and to the successful (re-)integration into society and to a productive and active life. Many lower limb disabled subjects depend upon a wheelchair for their mobility. Estimated numbers for the Netherlands, Europe and USA are respectively 80.000, 2,5 million and 1,25 million wheelchair dependent individuals. Groups large enough to allow a special research focus and conference activity. Both the quality of the wheelchair, the individual work capacity, the functionality of the wheelchair/user combination, and the effectiveness of the rehabilitation programme do indeed determine the freedom of mobility. Their optimization is highly dependent upon a continuous and high quality research effort, in combination with regular discussion and dissemination with practitioners. The book intends to give a state of the art view on the current fundamental, clinical and applied research findings and their consequences upon wheelchair propulsion, arm work, wheelchair training and possible consequences of a wheelchair confined life style. Also its implications for rehabilitation, as well as alternative modes of ambulation and activity in the wheelchair confined population, such as functional electrical stimulation and its possible future developments, are dealt with.
