### **Gregg Shorthand Series 90 -Trans. Tapes**

"In contemplating a revision of our Psychology: a Factual Textbook, we turned for criticisms and suggestions to the psychologists who were known to be using the book. Very soon it became evident, with their replies in hand for analysis, that something more than a revision would be necessary to satisfy the needs of many teachers. Our aim in this new text has been to respond to the temper of the times without losing the authority that comes with multiple authorship by experts, and equally without diminishing, we hope, the seriousness of the scientific approach to the problems of psychology. This new book is so much more than a revision of the old that we have given it a new title. In it we have turned the old book hind part to, beginning with the consideration of conduct and ending with the treatment of perception. The book is considerably enlarged, with some new chapters and some new collaborators. As was the case in the first book, these expert authors have formulated in the first instance the content of the chapters, but thereafter we as editors have freely exercised our right to alter their texts in the interests of unity in the whole." This succinct and highly readable book offers the perfect introduction to a fascinating and fast-growing field. It explains the key concepts in attachment theory and describes how the main attachment types play out both in childhood and later life. Students and professionals alike from across the fields of psychology, counselling, health and social work will find this an illuminating and thought-provoking guide to the rich complexity of human behaviour.

### **The Communication Age**

"Darwinism and war: science or religion? argues that the different perspectives of Christians and Darwinians on the nature and causes of warfare reveal them to be playing the same game, offering not so much scientific or empirical explanations but rival value-laden analyses, suggesting we have less a science-religion conflict and more one between two rival religious visions - Christianity and a form of secular Darwinian humanism"--

Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties.
