Around the globe, there is a growing awareness of the importance of addressing students' social and emotional development and wellbeing during schooling. Although the bulk of the work in this area has been conducted in North America and Europe, there is now a burgeoning interest in this topic in Australia and the wider Asia Pacific. This book is the first ever to provide a timely and important collection of diverse perspectives on and approaches to social and emotional learning in the Australian and Asia Pacific context. Adopting a broad view of social and emotional learning, the book explores positive psychology, belonging, teachers' professional development, pre-service training and post-initial training in Australia and in neighbouring communities such as China, Hong Kong, Korea, Singapore, New Zealand, Fiji, and other Pacific nations. "Frydenberg, Martin, and Collie have provided an incredible service by bringing together in a single well planned scholarly volume an incredible and well balanced group of senior and early career cutting edge researchers from Australia, Asia and the Asia Pacific area tackling approaches and key issues of social and emotional learning. Their much needed

volume links research on key factors, such as differing perspectives, measurement issues, the identification of at-risk children, teachers' social and emotional development, and these and other across the cultures of an increasingly vibrant and developing geographic region. It is indeed encouraging to gain the sense of depth and breadth of ongoing research that the volume gives. " John Roodenburg PhD FAPS MCEDP MCCOUNSP, Monash University Melbourne "Social and Emotional Learning is understood to be a crucial part of the school curriculum. This book covers the field, with a refreshing focus on work being done in Australia and in neighbouring countries. For school psychologists, the book helps us to understand how SEL can help at every level – from working with individuals, small groups, whole classes, or with the entire school. Our work with vulnerable students, individually or in small groups, is always more effective when embedded in the broader context of Social and Emotional Learning." Paul Bertoia FAPS MCEDP, Senior School Psychologist "This collected volume of researchers from Australia and the Asia-Pacific provides a thorough review of important educational, social, and emotional development issues for practitioners and researchers around the world. Readers will greatly benefit from the breadth and depth of treatment in each of the topics covered." Kit-Tai Hau, PhD, Choh-Ming Li Professor of Educational Psychology, The Chinese University of Hong Kong.

This volume focuses on the relationship between Greek medical texts and their audience(s), offering insights into how not only the backgrounds and skills of medical authors but also the contemporary environment affected issues of readership, methodology and mode of exposition. One of the volume's overarching aims is to add to our understanding of the role of the reader in the contextualisation of Greek medical literature in the light of interesting case-studies from various – often radically different – periods and cultures, including the Classical (such as the Hippocratic corpus) and Roman Imperial period (for instance Galen), and the Islamic and Byzantine world. Promoting, as it does, more in-depth research into the intricacies of Greek medical writings and their diverse revival and transformation from the fifth century BC down to the fourteenth century AD, this volume will be of interest to classicists, medical historians and anyone concerned with the reception of the Greek medical tradition.

Polluted air and contaminated food and water are major causes of human health deterioration, but public health policy has long struggled to effectively address these concerns. This timely book--written for a wide audience of policy makers, researchers, and general readers--synthesizes what we already know about environmental hazards, identifies the gaps in our knowledge, and provides a roadmap for reducing human exposure to environmental pollution. With contributions from leading experts, Environmental Determinants of Human Health examines numerous pollutants, both inorganic and organic, in the context of their human health impacts. Individual chapters explore exposure pathways, macroeconomic impacts of

human health deterioration, technological and non-technological methods for reducing exposures, monetary and non-monetary benefits from exposure reduction, and risk communication and awareness, including citizen participation approaches. This volume is a crucial text for policy makers requiring scientific justification for the development of new environmental regulations, scientists researching public health and environmental contamination, and members of the public interested in human health issues.

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. *Strategies to Improve Cardiac Arrest Survival* examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of *Strategies to Improve Cardiac Arrest Survival* provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

"The main message emerging from this new comprehensive global assessment is that premature death and disease can be prevented through healthier environments--and to a significant degree. Analysing the latest data on the environment-disease nexus and the devastating impact of environmental hazards and risks on global health, backed up by expert opinion, this report covers more than 130 diseases and injuries. The analysis shows that 23% of global deaths (and 26% of deaths among children under five) are due to modifiable environmental factors--and therefore can be prevented. Stroke, ischaemic heart disease, diarrhoea and cancers head the list. People in low-income countries bear the greatest disease burden, with the exception of noncommunicable diseases. The report's unequivocal evidence should add impetus to coordinating global efforts to promote healthy environments--often through well-established, cost-effective interventions. This analysis will inform those who want to better understand the transformational spirit of the Sustainable Development

Goals agreed by Heads of State in September 2015. The results of the analysis underscore the pressing importance of stronger intersectoral action to create healthier environments that will contribute to sustainably improving the lives of millions around the world."--Page 4 of cover.

Clinical Nursing Skills and Techniques

Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report

makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Preventing Disease Through Healthy Environments

Attentional biases (ABs) play a prominent role in the development and maintenance of clinically relevant symptoms of, for example, anxiety and depression. In particular, increased attentional orienting and preoccupation with biologically relevant and mood-congruent stimuli has been observed, suggesting that the visual-attentional system is overly sensitive towards threat cues and avoidant of cues of reward in these disorders. First, several experimental paradigms have been used to assess ABs, e.g., the dot probe task, the emotional stroop task, and the spatial cueing task amongst others. Yet, these paradigms are based on different theoretical backgrounds and target different stages of the attentional process. Thus, different paradigms provided converging as well as diverging evidence with regard to ABs. However, it is often not entirely clear to what extent this reflects real differences and commonalities, or is caused by differences in methodology. For example, behavioral reaction time data can only provide a snapshot of selective attention. Measuring event-related potentials, eye movements, or functional brain imaging data enables exploring the exact temporal and spatial dynamics of attentional processes. Moreover, neuroimaging data reveal specific cortical networks involved in directing attention toward a stimulus or disengaging from it. Second, ABs have been mainly discussed as symptoms of psychopathology, while results in healthy participants are still scarce; previous studies mostly compared extreme groups. However, a comprehensive theoretical and empirical account of ABs in psychopathology also requires a thorough account of ABs in the general healthy population. Moreover, the effect of gender, as an important contributing factor in processing of emotional stimuli, has also not been considered systematically in previous research. Third, a variety of stimuli has been used in the assessment of ABs. So far, mostly facial or word stimuli have been applied. However, in everyday life not only facial emotion recognition but also a fast evaluation of complex social situations is important to be effective in social interactions. Recent research started using more complex stimuli to raise ecological validity. However, the use of ecologically valid stimuli poses some methodological challenges and needs to be applied more systematically. The aim of this research topic is to integrate different paradigms and stimuli, addressing individuals from the whole range of the population continuum, and to apply different methodological approaches. It is intended to bring together expertise in stimulus selection, timing and implementing issues, advancing and broadening the overall understanding of ABs.

The U.S. Census Bureau has reported that 56.7 million Americans had some type of disability in 2010, which represents 18.7 percent of the civilian noninstitutionalized population included in the 2010 Survey of Income and Program Participation. The U.S. Social Security Administration (SSA) provides disability benefits through the Social Security Disability Insurance (SSDI) program and the Supplemental Security Income (SSI) program. As of December 2015, approximately 11 million individuals were SSDI beneficiaries, and about 8 million were SSI beneficiaries. SSA currently considers assistive devices in the nonmedical and medical areas of its program guidelines. During determinations of substantial gainful activity and income eligibility for SSI benefits, the reasonable cost of items, devices, or services applicants need to enable them to work with their impairment is subtracted from eligible earnings, even if those items or services are used for activities of daily living in addition to work. In addition, SSA considers assistive devices in its medical disability determination process and assessment of work capacity. The Promise of Assistive Technology to Enhance Activity and Work Participation provides an analysis of selected assistive products and technologies, including wheeled and seated mobility devices, upper-extremity prostheses, and products and technologies selected by the committee that pertain to hearing and to communication and speech in adults.

The Global Monitoring Report 2015/2016, produced by the World Bank Group in partnership with the International Monetary Fund, comes at an inflection point in both the setting of global development goals and the demographic trends affecting those goals. This year marks the end of the Millennium Development Goals (MDGs) and the launching of the Sustainable Development Goals (SDGs), while the World Bank Group has in parallel articulated the twin goals of sustainably ending extreme poverty and sharing prosperity. This report presents the latest global poverty numbers, based on the 2011 purchasing power parity (PPP) data, and examines the pace of development progress through the lens of the evolving global development goals. The special theme of this year's report examines the complex interaction between demographic change and development. With the number of children approaching a global ceiling of two billion, the world's population is growing slower. It is also aging faster, with the share of people of working age starting a decline in 2013. But the direction and pace of these trends vary starkly across countries, with sizeable demographic disparities between centers of global poverty (marked by high fertility) and drivers of global growth (marked by rapid aging). These demographic disparities are expected to deeply affect the pursuit of the post-2015 agenda, accentuating existing challenges and creating new opportunities.

The Innovation Imperative Contributing to Productivity, Growth and Well-Being

Research on gene drive systems is rapidly advancing. Many proposed applications of gene drive research aim to solve environmental and public health challenges, including the reduction of poverty and the burden of vector-borne diseases, such as malaria and dengue, which disproportionately impact low and middle income countries. However, due to their intrinsic qualities of rapid spread and irreversibility, gene drive systems raise many questions with respect to their safety relative to public and environmental health. Because gene drive systems are designed to alter the environments we share in ways that will be hard to anticipate and impossible to completely roll back, questions about the ethics surrounding use of this research are complex and will require very careful exploration. Gene Drives on the Horizon outlines the state of knowledge relative to the science, ethics, public engagement, and risk assessment as they pertain to research directions of gene drive systems and governance of the research process. This report offers principles for responsible practices of gene drive research and related applications for use by investigators, their institutions, the research funders, and regulators.

Obesity has come to the forefront of the American public health agenda. The increased attention has led to a growing interest in quantifying obesity prevalence and determining how the prevalence has changed over time. Estimates of obesity prevalence and trends are fundamental to understanding and describing the scope of issue. Policy makers, program planners, and other stakeholders at the national, state, and local levels are among those who search for estimates relevant to their population(s) of interest to inform their decision-making. The differences in the collection, analysis, and interpretation of data have given rise to a body of evidence that is inconsistent and has created barriers to interpreting and applying published reports. As such, there is a need to provide guidance to those who seek to better understand and use estimates of obesity prevalence and trends. *Assessing Prevalence and Trends in Obesity* examines the approaches to data collection, analysis, and interpretation that have been used in recent reports on obesity prevalence and trends at the national, state, and local level, particularly among U.S. children, adolescents, and young adults. This report offers a framework for assessing studies on trends in obesity, principally among children and young adults, for policy making and program planning purposes, and recommends ways decision makers and others can move forward in assessing and interpreting reports on obesity trends.

The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. Making Eye Health a Population Health Imperative: Vision for Tomorrow proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.
