Civil Engineer Because Freaking Awesome Is Not An Official Job Title

The need for civil engineers has outstripped supply, and it has become increasingly difficult for firms to retain civil engineers -- particularly the best ones -- and recruit additional civil engineers to meet staffing needs. In response, the ASCE Committee on the Employment of Civil Engineers (CECE) published this

guide on finding and keeping the best civil engineers. Written both by CECE members with many years' experience in both the public and private sectors, and human resource practitioners, this manual provides both the pragmatic focus of civil engineering practitioners as well as valuable contributions from specialists in the human resources field. This manual will help you to improve your organization's hiring practices and keep the good engineers you already have. Topics include: Retaining Key Civil Engineers; Recruiting; Compensation and Benefits; and Developing Your Team: Managerial Keys to Helping Junior Staff Advance Their Careers. An appendix discusses "Career Path: Moving Up the Career Ladder."

While the ASCE Body of Knowledge (BOK2) is the codified source for all technical and non-technical information necessary for those seeking to attain licensure in civil engineering, recent graduates have notoriously been lacking in the non-technical aspects even as they excel in the technical. Fundamentals of Civil Engineering: An Introduction to the ASCE Body of Knowledge addresses this shortfall and helps budding engineers develop the knowledge, skills, and attitudes suggested and implied by the BOK2. Written as a resource for all of the non-technical outcomes not

specifically covered in the BOK2, it details fundamental aspects of fourteen outcomes addressed in the second edition of the ASCE Body of Knowledge and encourages a broader perspective and understanding of the role of civil engineers in society as well as the reciprocal influence between civil engineering and social evolution. With discussion questions and group activities at the end of each chapter, topics covered include humanities and social sciences, experimentation, sustainability, contemporary issues and historical perspectives, risk and uncertainty, communication, public policy, globalization, leadership and teamwork, and professional and ethical responsibilities. Suitable for both current and former students in pursuit of further breadth and depth of knowledge and professional maturity, this primer promotes introspection, self-evaluation, and self-learning. It details those attitudes that are essential to the achievement of personal and professional success and advancement to positions of leadership, and encourages an appreciation of the human values that are fundamental to professional practice.

Civil Engineering Reference Manual for the PE Exam

A well-written, hands-on, single-source guide to the professional practice of civil engineering. There is a growing understanding that to be competitive at an international level, civil engineers not only must build on their traditional strengths in technology and science but also must acquire greater mastery of the

business of civil engineering. Project management, teamwork, ethics, leadership, and communication have been defined as essential to the successful practice of civil engineering by the ASCE in the 2008 landmark publication, Civil Engineering Body of Knowledge for the 21st Century (BOK2). This single-source guide is the first to take the practical skills defined by the ASCE BOK2 and provide illuminating techniques, quotes, case examples, problems, and information to assist the reader in addressing the many challenges facing civil engineers in the real world. Civil Engineer's Handbook of Professional Practice: Focuses on the business and management aspects of a civil engineer's job, providing students and practitioners with sound business management principles Addresses contemporary issues such as permitting, globalization, sustainability, and emerging technologies Offers proven methods for balancing speed, quality, and price with contracting and legal issues in a client-oriented profession Includes guidance on juggling career goals, life outside work, compensation, and growth From the challenge of sustainability to the rigors of problem recognition and solving, this book is an essential tool for those practicing civil engineering.

Doctoral Thesis / Dissertation from the year 2007 in the subject Pedagogy - Job Education, Occupational Training, Further Education, grade: 1.00, University of the Philippines (Graduate School), course: Educational Management, language: English, abstract: The study focused on the assessment of the level of competence of Filipino civil engineers in Northern Samar, its prospects for employment and implications for curricular improvement. It employed the descriptive-correlational method of research. Two sets of questionnaire were utilized to gather information needed in this study. The first was on the profile of the civil-engineer respondents and level of competence and the second was the AACUP instrument. The civil engineers rated themselves as moderately competent as to level of competence, ranking as first is managerial skills while keeping abreast with the latest technology was observed to be the lowest. The respondents' immediate supervisors or HRMO rated their employees as moderately competent, wherein technical expertise is the highest and communication skills was observed to be the lowest. As regards to the status of the civil

engineering curriculum in the University of Eastern Philippines, Vision, Mission, Goals and Objectives, Faculty, Curriculum and Instruction, Support to Students, Library and Administration were rated very good, while Physical Plant and Facilities, Extension & Community Involvement and Laboratories were rated good and research was rated fair. In summary, the general findings of the study had a very good rating. The same findings revealed that there is no significant relationship between the respondents' level of competence and their age, eligibility, position and years of experience, while sex, category of employment, type of employment, training/seminars attended and highest educational attainment were found to be significant with the respondents' level of competence. There is no significant difference on the level of competence between the UEP and the non UEP graduates in terms of communication skills, managerial skills, environmental awareness, professional advancement and keeping abreast with the latest technology, while there is significant difference on the level of competence between the UEP and non UEP graduates in terms of skills and technical expertise. Likewise there is no significant difference on the ratings of the civil engineers and the observations of their immediate supervisors or HRMO.
