Lawrence Freedman wrote in his acclaimed book *The Evolution of Nuclear Strategy*, 'James King permitted me to read a copy of his own masterly unpublished study entitled *The New Strategy*', (London. Macmillan in association with the International Institute for Strategic Studies. 1981) p.xii. There were in fact nine drafts of the manuscript written by James E. King Jr (Jim) from 1948 to 1988. Correspondence indicates that Lawrence Freedman probably read a copy in 1976 of a version given by Jim King to Ken Booth in 1973. Eight of these drafts are provided in their original unaltered form on a CD to accompany this volume. The ninth draft is not enclosed as it remains classified as 'Top Secret'. A declassified paper entitled 'The Intellectuals and the Bombs presented in 1982' provides insight for a likely reasoning of such a classification despite a publication contract with The Free Press.

"Blackout is an important and timely book. In the form of this compact volume, one of the best and most productive peak oil authors working today has turned his customary scholarship, wisdom, wit and writing prowess to some of the most critical issues now unfolding on our planet. "- Frank Kaminski, Energy Bulletin Coal fuels about 50% of US electricity production and provides a quarter of the country's total energy. China and India's ferocious economic growth is based on coal-generated electricity. Coal currently looks like a solution to many of our fast-growing energy problems. However, while coal advocates are urging full steam ahead, increasing reliance on the dirtiest of all fossil fuels has crucial implications for climate science, energy policy, the world economy, and geopolitics. Drawbacks to a coal-based energy strategy include: Scarcity—new studies prove that the peak of usable coal production may actually be less than two decades away. Cost—the quality of produced coal is declining, while the expense of transport is rising, leading to spiralling costs and potential shortages. Climate impacts—our ability to deal with the historic challenge of climate change may hinge on reducing our coal consumption in future years. Blackout goes to the heart of the tough energy questions that will dominate every

sphere of public policy throughout the first half of this century, and it is a must-read for planners, educators, and anyone concerned about energy consumption, peak oil, and climate change. Richard Heinberg is a journalist, editor, lecturer, and senior fellow of the Post Carbon Institute. He is one of the world's foremost peak oil educators and the award-winning author of seven previous books, including *Peak Everything* and *The Party's Over*.

Kenneth H. Williams, Associate Editor Peggy L. Dillard, Editorial Associate The autumn of 1863 was a trying time for Jefferson Davis. Even as he expressed unwavering confidence about the eventual success of the Confederate movement, he had to realize that mounting economic problems, low morale, and rotating army leadership were threatening the welfare of the new nation. Less than a year after the October 1863 Confederate victory at Chickamauga, the South relinquished Atlanta to Sherman. During the tumultuous eleven months chronicled in Volume 10, Davis retained his fervor for southern nationalism as he struggled furiously to command a war and maintain a government. As the letters contained here illustrate, he soldiered bravely on.

relationships between the various methods of divination used from ancient black magic. This included a study on demonology and the methods demons used to bother troubled men while touching on topics such as werewolves and vampires. It was a political yet theological statement to educate a misinformed populace on the history, practices and implications of sorcery and the reasons for persecuting a witch in a Christian society under the rule of canonical law. This book is believed to be one of the main sources used by William Shakespeare in the production of Macbeth. Shakespeare attributed many quotes and rituals found within the book directly to the Weird Sisters, yet also attributed the Scottish themes and settings referenced from the trials in which King James was involved.

Canada and the United States are similar in terms of the species of wildlife that mingle freely across their shared border. Despite this similarity, however, there are significant differences between approaches to wildlife management in these two nations. In *Land, Stewardship, and Legitimacy*, Andrea Olive examines the divergent evolution of endangered species policy on either side of the 49th parallel. Examining local circumstances in areas as distant and diverse as southern Utah and the Canadian Arctic, Olive shows how public attitudes have shaped environmental policy in response to endangered species law, specifically the Species at Risk Act in Canada and the

Endangered Species Act in the U.S. Richly researched and accessibly written, this is the first book to compare endangered species policy on both sides of the Canada-U.S. border. It will appeal to students and scholars of environmental policy, politics, and ethics, and anyone interested in current approaches to wildlife management.

The Many Faces of Judge Lynch

The U.S. is the most violent industrialized country in the world, and lynching - that is, murder endorsed by the community - may be a key to understanding America's heritage of violence and perhaps point to solutions that can eradicate it. While lynchings are predominantly racial in tone and motive, Christopher Waldrep's sweeping study of the meaning and uses of lynching from the colonial period to the present reveals that the definition of the term has shifted dramatically over time, and that the victims and perpetrators of lynching were as diverse as its many meanings. By examining lynching from a comparative and temporal perspective, Waldrep teaches us important lessons not only about racial violence in America, but about the ways in which communities define and justify crime and the punishment of its criminals.

essential writings that every student of journalism should know. Designed as a primary text for undergraduate students, each reading was carefully chosen in response to extensive surveys from educators reflecting on the needs of today's journalism classroom. Readings range from critical and historical studies of journalism, such as Walter Lippmann's *Public Opinion* and Michael Schudson's *Discovering the News*, to examples of classic reporting, such as Carl Bernstein and Bob Woodward's *All the President's Men*. They are supplemented by additional readings to broaden the volume's scope in every dimension, including gender, race, and nationality. The volume is arranged thematically to enable students to think deeply and broadly about journalism—its development, its practice, its key individuals and institutions, its social impact, and its future—and section introductions and headnotes precede each reading to provide context and key points for discussion.

Histories of the Irish Future is an intellectual history of Ireland and a history of Irish crises viewed through the eyes of twelve key writers: William Petty, William Molyneux, Edmund Burke, Thomas Malthus, Richard Whately, Friedrich Engels, John Mitchel, James Connolly, Hanna Sheehy Skeffington, Jeremiah Newman, Conor Cruise O'Brien and Fintan O'Toole. Their analyses of the shifting conditions of Ireland and their efforts to address Ireland's predicaments are located within the wider social, political, economic and cultural anxieties of their times. The result is a pioneering interdisciplinary contribution to modern Irish history and Irish Studies that will appeal to students of politics, economic history, and philosophy.
