Julia Song and her friend Patrick would love to win a blue ribbon, maybe even two, at the state fair. They've always done projects together, and they work well as a team. This time, though, they're having trouble coming up with just the right project. Then Julia's mother offers a suggestion: They can raise silkworms, as she did when she was a girl in Korea. Patrick thinks it's a great idea. Of course there are obstacles—for example, where will they get mulberry leaves, the only thing silkworms eat—but nothing they can't handle. Julia isn't so sure. The club where kids do their projects is all about traditional American stuff, and raising silkworms just doesn't fit in. Moreover, the author, Ms. Park, seems determined to make Julia's life as complicated as possible, no matter how hard Julia tries to talk her out of it. In this contemporary novel, Linda Sue Park delivers a funny, lively story that illuminates both the process of writing a novel and the meaning of growing up American.

Partisan Gerrymandering and the Construction of American Democracy

Americans often complain about the operation of their government, but scholars have never developed a complete picture of people's preferred type of government. In this provocative and timely book, Hibbing and Theiss-Morse, employing an original national survey and focus groups, report the governmental

procedures Americans desire. Contrary to the prevailing view that people want greater involvement in politics, most citizens do not care about most policies and therefore are content to turn over decision-making authority to someone else. People's wish for the political system is that decision makers be empathetic and, especially, non-self-interested, not that they be responsive and accountable to the people's largely nonexistent policy preferences or, even worse, that the people be obligated to participate directly in decision making. Hibbing and Theiss-Morse conclude by cautioning communitarians, direct democrats, social capitalists, deliberation theorists, and all those who think that greater citizen involvement is the solution to society's problems.

The i5 Approach: Lesson Planning That Teaches Thinking and Fosters Innovation

If the three r's define education's past, there are five i's—information, images, interaction, inquiry, and innovation—that forecast its future, one in which students think for themselves, actively self-assess, and enthusiastically use technology to further their learning and contribute to the world. What students need, but too often do not get, is deliberate instruction in the critical and creative thinking skills that make this vision possible. The i5 approach provides a way to develop these skills in the context of content-focused and technology-powered lessons that give students the opportunity to Seek and acquire new information. Use visual images and nonlinguistic representations to add meaning. Interact with others to obtain and provide feedback and enhance understanding. Engage in inquiry—use and develop a thinking skill that will expand and extend knowledge. Generate innovative insights and products related to the lesson goals. Jane E. Pollock and Susan Hensley explain the i5 approach's foundations in brain research and its links to proven instructional principles and planning models. They provide step-by-step

procedures for teaching 12 key thinking skills and share lesson examples from teachers who have successfully “i5’ed” their instruction. With practical guidance on how to revamp existing lessons, The i5 Approach is an indispensable resource for any teacher who wants to help students gain deeper and broader content understanding and become stronger and more innovative thinkers.

Introduction to Research in Education

With the rise of science, we moderns believe, the world changed irrevocably, separating us forever from our primitive, premodern ancestors. But if we were to let go of this fond conviction, Bruno Latour asks, what would the world look like? His book, an anthropology of science, shows us how much of modernity is actually

a matter of faith. What does it mean to be modern? What difference does the scientific method make? The difference, Latour explains, is in our careful distinctions between nature and society, between human and thing, distinctions that our benighted ancestors, in their world of alchemy, astrology, and phrenology, never made. But alongside this purifying practice that defines modernity, there exists another seemingly contrary one: the construction of systems that mix politics, science, technology, and nature. The ozone debate is such a hybrid, in Latour's analysis, as are global warming, deforestation, even the idea of black holes. As these hybrids proliferate, the prospect of keeping nature and culture in their separate mental chambers becomes overwhelming—and rather than try, Latour suggests, we should rethink our distinctions, rethink the definition and constitution of modernity itself. His book offers a new explanation of science that finally recognizes the connections between nature and culture—and so, between our culture and others, past and present. Nothing short of a reworking of our mental landscape. *We Have Never Been Modern* blurs the boundaries among science, the humanities, and the social sciences to enhance understanding on all sides. A summation of the work of one of the most influential and provocative interpreters of science, it aims at saving what is good and valuable in modernity and replacing the rest with a broader, fairer, and finer sense of possibility.
