Levitation--is it possible? Can human beings really leave the ground through the power of the mind alone? How can this extraordinary defiance of gravitational force be induced at will? These are some of the questions answered in this startling book that lays bare the occult meditational techniques by which the mind can lift the body off the ground. This book gives you the facts, the history, the controversies, the theories, and, above all, the centuries-old secrets of levitation that have remained in the hands of a few adepts--until now. Essential Reiki Teaching Manual

An engaging behind-the-scenes look at the lesser-known forces that fueled the profound social reforms of the 1960s. Provocative and incisive, *The Liberal Hour* reveals how Washington, so often portrayed as a target of reform in the 1960s, was in fact the era's most effective engine of change. The movements of the 1960s have always drawn the most attention from the decade's chroniclers, but it was in the halls of government—so often the target of protesters' wrath—that the enduring reforms of the era were produced. With nuance and panache, Calvin Mackenzie and Robert Weisbrot present the real-life characters—from giants like JFK and Johnson to lesser-known senators

and congressmen—who drove these reforms and were critical to the passage of key legislation. The Liberal Hour offers an engrossing portrait of this extraordinary moment when more progressive legislation was passed than in almost any other era in American history.

The Chinese are inordinately proud of having invented, among a whole host of other things, the compass (without which the world would have got lost), paper (without which books would not exist), the printing press (ditto), porcelain (no pretty matching chinaware), silk (no decadence), pasta (what would the Italians eat?), the wheelbarrow (how would civilisation have fared without it?) and the bristle toothbrush. A guide to understanding the Chinese which dispels or confirms preconceived prejudices with humor and insight.

Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these

sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center

The aim of this book is to help students write mathematics better. Throughout it are large exercise sets well-integrated with the text and varying appropriately from easy to hard. And it provides many examples of what students should think and what they should write and how these two are often not the same.
