Encountering Jesus in the New Testament has been found in conformity with the Catechism of the Catholic Church. Encountering Jesus in the New Testament helps students further their personal relationship with Jesus Christ by growing in understanding of Jesus' historical, cultural, and religious background through an in-depth look at Scriptures. Answering the question, "Who is Jesus of Nazareth, the person people of faith call "Christ, the Son of God?," is a central focus of the text. In answering this question, the students will explore how the New Testament scriptures provide us with an answer.

Geometry

Geometry: Concepts and Applications is designed to help you discover, learn, and apply geometry. You will be challenged to make connections from concrete examples to abstract concepts. The real-world photographs and realistic art will help you see geometry in your world. You will also have plenty of opportunities to review and use algebra concepts as you study geometry. And for those of you who love a good debate, you will find plenty of opportunities to flex your logical muscles. - p. iii.

Geometry, Grades 9-12

"Prealgebra is designed to meet scope and sequence requirements for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Prealgebra follows a nontraditional approach in its presentation of content. The beginning, in particular, is presented as a sequence of small steps so that students gain confidence in their ability to succeed in the course. The order of topics was carefully planned to emphasize the logical progression throughout the course and to facilitate a thorough understanding of each concept. As new ideas are presented, they are explicitly related to previous topics."--BC Campus website.

Geometry for Enjoyment and Challenge

This text promotes student engagement with the beautiful ideas of geometry. Every major concept is introduced in its historical context and connects the idea with real-life. A system of experimentation followed by rigorous explanation and proof is central. Exploratory projects play an integral role in this text. Students develop a better sense of how to prove a result and visualize connections between statements, making these connections real. They develop the intuition needed to conjecture a theorem and devise a proof of what they have observed.
