Lesson Plans to Train Like You Fly

"the most complete explanation of aeronautical concepts for pilots pursuing a Private Pilot certificate."-- cover.

Instrument Flying Handbook (FAA-H-8083-15A)

This guide for flight instructors (CFIs) presents lesson plans in the form of scenario-based "maneuver briefings." A rich resource for active instructors, these lesson plans are also helpful to CFI applicants preparing their own materials. Lesson Plans can also be used as a companion book for flight instructors who are following the principles of scenario-based training taught in Arlynn McMahan's first book, Train Like You Fly: A Flight Instructor's Guide to Scenario-Based Training. Lesson Plans is

designed to work in complement with any syllabus and the FAA Practical Test Standards (PTS) or Airman Certification Standards (ACS). It explains how to teach each maneuver, making the flight instructor's favorite syllabus curriculum even more effective and enjoyable for flight students. Each maneuver briefing features a series of drawings instructors can discuss with their students or replicate in the classroom and an accompanying script to teach from, which includes a story or motivation on the why and how the maneuver is applied in actual flight. Common errors are discussed in the form of keys to success, to positively inspire students to become sound aviation citizens. In addition to the lesson plans, the book includes templates, checklists, and student assignments to build proper flight preparation habits and help determine the student's readiness to act as pilot-in-command. These tools are especially helpful to the flight instructor ahead of the major flight training milestones, such as first solo, solo cross-country, and the checkride. First published in 2011, This new Third Edition updates information to reflect current best practices and adds a new chapter for teaching Basic Instrument Maneuvers.

The Federal Aviation Administration (FAA) has published the Private Pilot - Airplane Airman Certification Standards (ACS) document to communicate the aeronautical knowledge, risk management, and flight proficiency standards for the private pilot certification in the airplane category, single-engine land and sea; and multiengine land and sea classes. This ACS incorporates and supersedes the previous Private Pilot Practical Test Standards for Airplane, FAA-S-8081-14. The FAA views the ACS as the foundation of its transition to a more integrated and systematic approach to airman certification. The ACS is part of the safety management system (SMS)

framework that the FAA uses to mitigate risks associated with airman certification training and testing. Specifically, the ACS, associated guidance, and test question components of the airman certification system are constructed around the four functional components of an SMS: Safety Policy that defines and describes aeronautical knowledge, flight proficiency, and risk management as integrated components of the airman certification system; Safety Risk Management processes through which internal and external stakeholders identify and evaluate regulatory changes, safety recommendations and other factors that require modification of airman testing and training materials; Safety Assurance processes to ensure the prompt and appropriate incorporation of changes arising from new regulations and safety recommendations; and Safety Promotion in the form of ongoing engagement with both external stakeholders (e.g., the aviation training industry) and FAA policy divisions. The FAA has developed this ACS and its associated guidance in collaboration with a diverse group of aviation training experts. The goal is to drive a systematic approach to all components of the airman certification system, including knowledge test question development and conduct of the practical test. The FAA acknowledges and appreciates the many hours that these aviation experts have contributed toward this goal. This level of collaboration, a hallmark of a robust safety culture, strengthens and enhances aviation safety at every level of the airman certification system.

Multi-Engine Syllabus

Private Pilot Manual

Welcome! Sometimes two is better than one especially in airplanes. Learning to fly a multi- engine aircraft or “twin” brings about a new dimension and set of skills for the pilot. A multi-engine rating is a key step in the process of becoming an airline pilot. The multi-engine class rating is one of the most enjoyable stages of a pilot’s training. It opens all kinds of new doors for a pilot and presents them with the challenges of operating a faster, more sophisticated aircraft. You will learn how to handle a higher workload, in less time, with a whole new unique set of potential emergencies.

The Standard Pilot Log

Both experienced and newly certified flight instructors can turn to this excellent resource for information about the problems students and more advanced pilots will encounter in obtaining their CFI.

Private Pilot Airman Certification Standards - Airplane

The Complete Pilot series aids student pilots preparing for licensing exams and can be used for home study, certified flight schools, or as a base for student kits. The Complete Private Pilot leads students through the study material for the private pilot license, including all the aeronautical knowledge requirements for the license and rating. The Complete Advanced Pilot, with study material for the instrument and commercial pilot licenses, augments basic subjects with more advanced topics, such as instrument flight rules (IFR) systems, procedures and regulations, and details about radio navigation, flight plans, and cockpit organization. The Complete Multi-Engine Pilot helps students prepare for the multi-engine rating for a pilot license, teaching the fundamentals of flying multi-engine aircraft and the aerodynamic laws that govern multiengine flight.
