What is true for us as individuals is true for us as a gathered community of God's people. We discover in the Bible that a church that is centered on the gospel of Jesus Christ will be shaped by the gospel of Jesus Christ. And a church shaped by the gospel of Jesus Christ will see that its true service of worship is conducted both inside the formal gathering of believers and outside it as well.

An understanding of the developments in classical analysis during the nineteenth century is vital to a full appreciation of the history of twentieth-century mathematical thought. It was during the nineteenth century that the diverse mathematical formulae of the eighteenth century were systematized and the properties of functions of real and complex variables clearly distinguished; and it was then that the calculus matured into the rigorous discipline of today, becoming in the process a dominant influence on mathematics and mathematical physics. This Source Book, a sequel to D. J. Struik's Source Book in Mathematics, 1200-1800, draws together more than eighty selections from the writings of the most influential mathematicians of the period. Thirteen chapters, each with an introduction by the editor, highlight the major developments in mathematical thinking over the century. All material is in English, and great care has been taken to maintain a high standard of accuracy both in translation and in transcription. Of particular value to historians and philosophers of science, the Source Book should serve as a vital reference to anyone seeking to understand the roots of twentieth-century mathematical thought.

Damodaran on Valuation

Everyone working in and with organizations will, from time to time, experience frustrations and problems when trying to accomplish tasks that are a required part of their role. This is an unusual routine - a recurrent interaction pattern in which someone encounters a problem when trying to accomplish normal activities by following standard organizational procedures and then becomes enmeshed in wasteful and even harmful subroutines while trying to resolve the initial problem. They are unusual because they are not intended or beneficial, and because they are generally pervasive but individually infrequent. They are routines because they become systematic as well as embedded in ordinary functions. Using a wide range of case studies and interdisciplinary research, this book provides researchers and practitioners with a new vocabulary for identifying, understanding, and dealing with this pervasive organizational phenomenon, in order to improve worker and customer satisfaction as well as organizational performance.

Organizations and Unusual Routines

A Source Book in Classical Analysis

A modern composer linked to the great Russian tradition of Rimsky-Korsakov and Mussorgsky, Alexander Tcherepnin produced a substantial body of work—both compositions and writings—that is of interest to music scholars as well as performers. Although his works are better known and more frequently performed in Europe, Tcherepnin made a unique contribution to the U.S. musical scene in the 1950s and 1960s as a teacher of composition at De Paul University in Chicago. This volume provides detailed information on his life and accomplishments, together with a catalogue of his works and performances and a complete bibliography. The first section offers an account of the composer's life and musical education in Russia and Paris and his subsequent career in the United States. It concludes with a critical analysis of his musical style. The catalogue is followed by separate alphabetical, chronological, and genre listings of the composer's works. The final sections are devoted to a discography of commercially available sound recordings and an annotated bibliography of writing by and about Tcherepnin. A series of appendixes contains valuable additional information on Tcherepnin's life and accomplishments, as well as data relating to the musical careers of his father, his two sons, and several of his composition students who have become recognized composers in their own right. This work, which incorporates the first detailed English-language biography of Alexander Tcherepnin, will be a valuable resource for scholars, music educators, and musicians with an interest in Russian music of the late nineteenth and early twentieth centuries.

This textbook guides the reader towards various aspects of growth and international trade in a Diamond-type overlapping generations framework. Using the same model type throughout the book, timely topics such as growth with bubbles, debt reduction in rich countries and policies to mitigate climate change are explored. The first part starts from the “old” growth theory and bridges to the “new” growth theory (including R&D and human capital approaches). The second part presents an intertemporal equilibrium theory of inter and intra-sectoral trade and concludes by analyzing the debt mechanics inducing the huge imbalances among eurozone countries. The book is primarily addressed to graduate students wishing to proceed to the analytically more demanding journal literature.

Here is the first book to identify American builders of planers, shapers and slotters, who operated throughout the 19th and early 20th centuries. Written in the style of the author's previous groundbreaking books on the American machine tool industry, this volume provides the reader with invaluable information on over 300 makers. Some are very well known, but many have previously gone virtually unrecognized by researchers. More than 1000 illustrations, taken from original catalogs and contemporary periodicals, show how these machines developed: starting out in the early 1800s as crude, hand-built copies of English machines and becoming, over the course of a century, monster machines weighing nearly one million pounds, unmatched elsewhere in the world. Numerous machine accessories, such as chucks, dividing heads, milling attachments and keyseating attachments, among others, are identified and illustrated. In addition, the book includes a glossary of terms used in describing the various types of planers, shapers and slotters, and provides illustrations that help identify the individual parts of the machines.

Since its formation in 1932, Saudi Arabia has been ruled by two interdependent families. The Al Sa'uds control politics and the descendants of Ibn Abd al-Wahhab impose Wahhabism—a violent, fanatical perversion of the pluralistic Islam practiced by most Muslims. Stephen Schwartz argues that Wahhabism, vigorously exported with the help of Saudi oil money, is what incites Palestinian suicide bombers, Osama bin Laden, and other Islamic terrorists throughout the world. Schwartz reveals the hypocrisy of the Saudi regime, whose moderate facade conceals state-sponsored repression and terrorism. He also raises troubling questions about Wahhabi infiltration of America's Islamic community and about U.S. oil companies sanitizing Saudi Arabia's image for the West. This sharp analysis and eye-opening expose illuminates the background to the September 11th terrorist attacks and offers new approaches for U.S. policy toward its closest ally in the Middle East.

Avid North American birders share wit, wisdom, advice, and what fuels their passion for birds. Birding gets you outside, helps you de-stress, exercises your body and mind, puts your day-to-day problems in perspective, and can be lots of fun. Birders know this, and in this collection of thirty-seven brief essays, birders from diverse backgrounds share their sense of wonder, joy, and purpose about their passion (and sometimes obsession). From the Pacific Ocean to Central Park, from the rainforest in Panama to suburban backyards-no matter what their habitat, what good birders have in common is a curiosity about the natural world and a desire to share it with others. In these delightful essays, each accompanied by an endearing drawing, devoted birders reveal their passion to be fulfilling, joyful, exhilarating, and maybe even contagious. Contributors include many well-known birders, such as Richard Crossley, Pete Dunne, Kenn Kaufman, Michael O'Brien, Bill Thompson, and Julie Zickefoose. A portion of the proceeds goes to the American Birding Association, North America's largest membership organization for active birders.
