GET TO THE FUTURE FIRST! LEVERAGE STRATEGIC NOVELTY (SN) TO TRANSFORM AND DOMINATE YOUR MARKET Become an “outlier organization”: recognize huge opportunities in novelty, and act fast and first Listen for the tremors already building beneath your markets Learn from winning “outlier” business models, organizational forms, markets, products, and services Today, the companies that rise rapidly to dominance are the outliers. They’re radically novel where it matters: whether in business models, products, services, or some other key driver of value.

Strategic Innovation reveals how to think like these vanguard organizations—and become one of them. You'll discover how to borrow the lenses and insights of companies operating right at the edge of conventional industry dynamics and boundaries...where opportunities are underdefined, predictions unstable, and the greatest opportunities exist. Using linked case studies and a proven three-step methodology, the authors guide you through uncovering Strategic Novelty (SN) with explosive potential...executing quickly... and learning and tweaking relentlessly to amplify your impact. If you keep doing what everyone else is doing, you may succeed—but not greatly, and not for long. If you want to create, transform, and dominate your market, you need to think and act like an outlier. Learn how. Now. Before someone does it to you. Right now, all around you, there's an explosion of new business models, new product/service categories, and new organizational forms. It's a veritable Cambrian Explosion of business life, led by outlier organizations you've never even heard of. Many will remain practically invisible to the incumbents in their markets...until they suddenly explode into dominance. What do they share? A fundamental commitment to Strategic Novelty (SN). Now, in Strategic Innovation, leading innovation strategists Liisa Välikangas and Michael Gibbert show you how to leverage SN to become your industry's winning disruptor. You'll master SN through case studies from leading outlier organizations in areas ranging from 3D printing to crowd financing and resource-constrained innovation. Each case is original, previously unpublished, and based at least in part on the authors' direct experiences. Through these cases, you'll

explore how each company's story is playing out: sometimes in failure, but often in massive success. You'll discover why incumbents rarely notice outliers in time, and how to keep it from happening to you. Perhaps most valuable of all, the authors help you extrapolate the likely impact of any novelty, so you can tell the difference between promising opportunities and those destined to fail.

Whether you're a Christian Scientist searching for answers or a former follower still struggling to let go of the difficult and confusing teachings of Christian Science, this book can help you on your search for truth. In these ten intensely personal narratives, former Christian Scientists bravely recount their journey out of the religion and into authentic, biblical faith in Jesus Christ. Each chapter addresses a different theme, shining light on theological inconsistencies taught by Mary Baker Eddy in her book *Science and Health with Key to the Scriptures*. These themes include matter, Jesus Christ, contagion, prayer, and sin. With reflection questions, pastoral teaching, related Bible verses, and a guiding letter from the author, each story navigates common obstacles and paves the way for a deeper understanding of the Christian faith. For those yearning to find truth, there is hope to be found here.

The LTE / SAE Deployment Handbook

Communities Dominate Brands: Business and marketing challenges for the 21st century is a book about how the new phenomenon of digitally connected communities are emerging as a force to counterbalance the power of the big brands and advertising. The book explores the problems faced by branding, marketing and advertising facing multiple radical changes in this decade. Communities Dominate Brands discusses how disruptive effects of digitalisation and connectedness introduce threats and opportunities. The authors compellingly illustrate how modern consumers are forming communities and peer-groups to pool their power resulting in a dramatic revolution of how businesses interact with their customers. The book provides practical guidance of how to move from

obsolete interruptive advertising to interactive engagement marketing and community based communications, with dozens of real business examples from around the world. Communities Dominate Brands addresses its topic from a marketing (including advertising and branding) perspective and maintains a rigorous focus on business and profit dimensions of the issues involved. The book discusses such recent phenomena as blogging, virtual environments, mobile phone based swarming and massively multiplayer games. The book introduces a new generation of consumers called Generation-C (for Community). The book also discusses such new concepts as the Connected Age, Reachability, the Four C's, Alpha Users, and introduces Communities as an unavoidable new element into the traditional communication model. Combining the digital trends, modern management theories, and emerging new customer behaviour, Communities Dominate Brands arrives to its conclusion, that traditional marketing methods are increasingly ineffective and even becoming counterproductive. The power of the brands and the abuses by marketing have created a vacuum for a counterbalance, and digitally connected communities, the blogosphere, gamers, and especially the always-on connectedness of those on mobile phone networks, are emerging as the counterforce to redress the balance. The power of smart mobs and digitally enlightened communities will react rapidly to marketing excesses as the natural force balancing the power of the brands. The way a business can and must interact with the powerful new communities is through engagement marketing, by enticing the communities to interact with the brands. Communities Dominate Brands covers

the major changes taking place in business and industry worldwide from leading digitally connected societies such as Finland, Korea, Japan, Hong Kong, UK and the USA. The authors discuss the business relevance of such community related technologies and phenomena such as blogging, CANs, iPod, MMOGs, MVNOs, PVRs, Ringing Tones, SMS text messaging, swarming, VOD. This is the definitive business book on the impact of new technologies, not explaining how technology works, but showing what businesses need to do to make money in the new digitally converging environment. Communities Dominate Brands analyses early successes of engaging communities by global brands such as Adidas, Apple, Audi, BBC, Boeing, Coca Cola, eBay, Ford, Google, Guinness, Hush Puppies, Lonely Planet, MTV, Nokia, Orange, Philips, Red Bull, Sony, Tesco, Tony & Guy, Vodafone, etc. The lessons are amplified with insights from rough punishment by communities suffered by Hutchison/Three networks, Kryptonite locks, Mazda, the Philippines Government, etc. Fully indexed, impeccably researched with documented sources, offering over 50 current business examples and over a dozen case studies, Communities Dominate Brands is a hands-on practical business handbook on how to adjust marketing to deal with communities. With tools such as the Four C's and Reachability, the authors provide a competitive head-start to all who want to achieve customer satisfaction and return business in the 21st century.

Communities Dominate Brands

The current Symbian Press list focuses very much on the small scale features of Symbian OS in a programming context. The Architecture Sourcebook is different. It's not a how-to book, it's a 'what and why' book. And because it names names as it unwinds the design decisions which have shaped the OS, it is also a 'who' book. It will show where the OS came from, how it has evolved to be what it is, and provide a simple model for understanding what it is, how it is put together, and how to interface to it and work with it. It will also show why design decisions were made, and will bring those decisions to life in the words of Symbian's key architects and developers, giving an insider feel to the book as it weaves the "inside story" around the architectural presentation. The book will describe the OS architecture in terms of the Symbian system model. It will show how the model breaks down the system into parts, what role the parts play in the system, how the parts are architected, what motivates their design, and how the design has evolved through the different releases of the system. Key system concepts will be described; design patterns will be explored and related to those from other operating systems. The unique features of Symbian OS will be highlighted and their motivation and evolution traced and described. The book will include a substantial reference section itemising the OS and its toolkit at component level and providing a reference entry for each component.

Animation in Context is an illustrated introduction to cultural theory, contextual research and critical analysis. By making academic language more accessible, it empowers animators with the confidence and enthusiasm to engage with theory as a fun, integral, and applied part of the creative process. Interviews with contemporary industry professionals and academics, student case studies and a range of practical research exercises, combine to encourage a more versatile

approach to animation practice – from creating storyboards to set designs and soundtracks; as well as developing virals, 3D zoetropes and projection mapping visuals. Mark Collington focuses on a core selection of theoretical approaches that shape animation narrative, supported by a broader set of shared theoretical principles from the worlds of art, design, film and media studies. This discussion is underpinned by cross-disciplinary thinking on a range of topics including genre, humour, montage and propaganda. These are applied to the analysis of a range of animated films and projects from Disney and Animé, to independent artist-filmmakers such as Wendy Tilby, Amanda Forbis and Jerzy Kucia. These ideas are also applied to other uses of animation such as advertising, sitcom, gaming and animated documentary.
