R is a statistical computer program used and developed by statisticians around the world. It is probably the leading statistical program, at least among statisticians, and it is freely available. A First Guide to Statistical Computations in R is intended for the newcomer who wants to do statistical analysis with R and needs a guide to get started. The book focuses on statistical data problems that are often encountered within the biosciences. It puts special emphasis on linear models and analysis of repeated measurements data, but also deals with binary data and survival data, among others. Problems are presented and solutions - along with the corresponding OR code and output - are provided. The guide is divided into two parts: the first part on R basics and the second part on the statistical analyses using R. Various datasets are used for illustration and they are all available in the R package `Guide1data`.

Guide to World Commodity Markets

Commodity Risk Management goes beyond just an introductory treatment of derivative securities, dealing with more advanced topics and approaching the subject matter from a unique perspective. At its core lies the concept that commodity risk management decisions require an in-depth understanding of speculative strategies, and vice versa. The book offers readers a unified treatment of important concepts and techniques that are useful in applying derivative securities in the management of risk in commodity markets. While some of these techniques are well known and fairly common, Poitras offers applications to specific situations and links to speculative trading strategies - extensions of the material that not only are hard to come by, but helpful to both the academic and the practitioner. The book is divided into three parts. The first part deals with the general framework for commodity risk management, the second part focuses on the use of derivative security contracts in commodity risk management, and the third part deals with applications to three specific situations. As a textbook, this book is designed to appeal to classes at a senior undergraduate/MBA/MA level of training in Finance, financial economics, actuarial science, management science, agricultural economics and accounting. There will also be interest for the book as: a monograph for research libraries, a handbook for individuals working in the commodity risk management industry, and a guidebook for those in the general public interested in topics like farm risk management or the assessment of hedging practices of publicly-traded commodity producers.

Metals Trading Handbook, by Paddy Crabbe, offers an invaluable training manual and reference source for anyone working within the non ferrous metals industry or trading on the London Metal Exchange. At the core of its thorough analysis lies the principle that simple explanation and minimal jargon are invaluable to the practitioner. It starts with simple fundamentals and moves onto more complex situation. The text examines the way the LME operates, how prices are formed, the

significance and timing of "official settlement" prices, how risk in the forward markets occurs and changes, how risk builds up, methods of recognition and hedging the exposure to priced metal, the impact on valuations (marking to market), profit and loss and cashflow.
