In this renowned guide to capturing the outdoor world on film, Galen Rowell, the connoisseur of outdoor and adventure photography, reveals the art, craft and philosophy behind his world-famous images in this stunningly illustrated book. Since it's original publication almost ten years ago, this groundbreaking work remains both an inspired manual to taking better pictures and an inspiring journey of discovery into the creative process. In more than 140 color photographs and 66 essays, Rowell shows how he transformed the natural world around him into vivid, memorable works of art. He covers everything from the practical and immensely helpful technicalities of how to pack equipment lightly and use the correct flash to the more theoretical concerns of imagining a photograph before pulling out the camera and immersing oneself fully into this natural and artistic quest. Both the artist and his unique talent come alive in these pages, a tribute to the ways in which his photographs, philosophy, and vision immeasurably enrich those who view his work.

Genetic research increasingly dominates medical thought and practice in the United States and in many other industrialized nations. Susan Lindee's original study explores the institutions, disciplines, and ideas that initiated the reconfiguration of genetic medicine from a marginal field in the mid-1950s to a core research frontier of biomedicine. Tracing the work of geneticists and other experts in identifying and classifying disease during the explosive period between 1950 and 1980, Lindee identifies the individual "moments of truth" that moved the field away from its eugenic past to the center of a new world view in which nearly all disease is understood to be fundamentally genetic. She suggests that these moments of truth were experienced not only by scientists but also by those who had familial, intimate, emotional knowledge of hereditary disease: patients, family members, and research subjects. Focusing on benchmarks in the field—such as the rise of neonatal testing in the 1960s, genetic studies of unique human populations such as the Amish, the development of human cytogenetics and human behavioral genetics, and the efforts to find genes for rare diseases such as familial dysautonomia—she tracks the emergence of a biomedical consensus that nearly all disease is genetic disease. Using the success of this field as a point of entry, Lindee chronicles both the production of knowledge in biomedicine and changes in the cultural meaning of the body in the late twentieth century. She suggests that scientific knowledge is a community project that is shaped directly by people in many different social and professional locations. The power to experience and report scientific truth may be much more dispersed than it sometimes appears, because people know things about their own bodies, and their knowledge has often been incorporated into the technical infrastructure of genomic medicine. Lindee's pathbreaking study shows the interdependence of technical and social parameters in contemporary biomedicine.

LINCOLN CENTENARY FEBRUARY 12

NAMED ONE OF THE BEST BOOKS OF THE YEAR BY PUBLISHERS WEEKLY A sweeping story told in letters, spanning two continents and two world wars, Jessica Brockmole's atmospheric debut novel captures the indelible ways that people fall in love, and celebrates the power of the written word to stir the heart. March 1912: Twenty-four-year-old Elspeth Dunn, a published poet, has never seen the world beyond her home on Scotland's remote Isle of Skye. So she is astonished when her first fan letter arrives, from a college student, David Graham, in far-away America. As the two strike up a correspondence—sharing their favorite books, wildest hopes, and deepest secrets—their exchanges blossom into friendship, and eventually into love. But as World War I engulfs Europe and David volunteers as an ambulance driver on the Western front, Elspeth can only wait for him on Skye, hoping he'll survive. June 1940: At the start of World War II, Elspeth's daughter, Margaret, has fallen for a pilot in the Royal Air Force. Her mother warns her against seeking love in wartime, an admonition

Margaret doesn't understand. Then, after a bomb rocks Elspeth's house, and letters that were hidden in a wall come raining down, Elspeth disappears. Only a single letter remains as a clue to Elspeth's whereabouts. As Margaret sets out to discover where her mother has gone, she must also face the truth of what happened to her family long ago. Sparkling with charm and full of captivating period detail, *Letters from Skye* is a testament to the power of love to overcome great adversity, and marks Jessica Brockmole as a stunning new literary voice.
