The must-have book for candidates preparing for the oral component of the FRCS (Tr and Orth).

Communication Scenarios for the MRCPCH and DCH Clinical Exams

2008 BMA Medical Book Competition Awards: First Prize Paediatrics Prepared in conjunction with the Royal College of Paediatrics and Child Health (RCPCH), MRCPCH MasterCourse has been constructed as a comprehensive package for trainees facing professional examinations in paediatrics and child health. Career paediatricians sitting the full MRCPCH examination will require the boxed set. This comprises volumes 1 and 2, a DVD containing video clips of clinical scenarios, and PIN access to a website with self-assessment and further learning materials. This provides all the learning materials required for successful completion of the MRCPCH parts 1 and 2 and MRCPCH Clinical. For candidates sitting the Diploma in Child Health (DCH) exams and doctors with a primary-care interest in child health, Volume 1 will be sufficient. A complete multi-media course for the new MRCPCH examination. The written component are produced as attractive, full-colour books written in a problem-orientated style, with full-colour line drawings and colour photographs. Books contain references to video and audio clips on accompanying DVD that comes with the books to help with preparation for the MRCPCH Clinical. The related website offers self-testing questions (in exam style)

Paediatric Rheumatology

Pediatric cancer develops in 1 to 500 children. Typically, the type of cancers that develop in children is different than those that develop in adults, in that they are often the result of a DNA mutation rather

than environmental or lifestyle risk factors. Leukemia, brain and central nervous system tumors, and neuroblastomas are the most common cancer types in child populations. Children tend to respond better to anticancer treatments, including chemotherapy and radiation. However, long-term side effects are common in children, often requiring follow-up care and lifestyle intervention for the rest of their lives. The percentage of 5-year survivors was over 50% for the most common cancers. This suggests that a majority of cancers in this population are highly survivable. As such, research should focus on aspects of survivorship for these individuals. This book will explore issues related to pediatric cancer and their associated treatments.

Postgraduate Orthopaedics

Manual of Neonatal Care

Advances over the past two decades have enabled physicians to revolutionize the manner in which they can assess and manage children's pain. Thirty years ago it was thought that young children did not experience pain and therefore it was not necessary to treat it. Today professionals from a variety of disciplines have contributed data that have revolutionized medical perspectives. Technological advances now enable doctors to treat acute pain in fetuses, premature neonates, infants, toddlers, children, and adolescents with increasing precision and efficacy. Research highlighting the context of

chronic pain has moved them away from a mind-body dichotomy and toward an integrated, holistic perspective that leads to substantial improvement in children's adaptive functioning as well as subjective discomfort. This book covers these topics and is intended for anyone who provides medical care to children. Each chapter provides an overview of the problem, followed by a "hands on" description of relevant assessment and intervention strategies. The role of the primary care practitioner is highlighted, both as a front-line resource as well as a consumer of specialized pediatric pain treatment services. Each chapter ends with a summary and specific bullet points highlighting the most central elements, making for quick and easy reference.

Pain in Children

The product of a world center of excellence in teaching and medical and surgical practice, second edition of a bestseller combines the advantages of a colour atlas with those of a short textbook covering clinical features, epidemiology, investigations, and differential diagnosis. Illustrations include clinical photos, imaging, charts, graphs, and histology where appropriate. The author/editor team, supported by specialist contributions from clinicians at Institute of Child Health/Great Ormond Street, offers an unmatched range of expertise in a compact volume. The book is of lasting reference value to pediatricians in training and practice, and to professionals in many other disciplines.

Paediatric Neurology

In this second edition, new questions have been added and existing material has been updated. The book's hybrid format bridges the gap between standard MCQ books and textbooks. It contains 280 exam-based paediatric MCQs written by a team of subject specialists. Each question is accompanied by the correct answer, plus a page-long subject summary focusing on the specific topics likely to occur in the examination, including lists, mnemonics and bullet points. This new format is a response to requests from exam candidates for longer teaching notes to counteract the need to refer to unnecessarily detailed textbooks.

Pediatric Clinical Skills E-Book

This book is an accessible tool for practising and trainee paediatric neurologists. It aids diagnosis and patient management in child neurology, with a rational and efficient approach to assessment, investigation and treatment. It contains important reference material and reflects real life situations.

MRCPCH Mastercourse

"Child injuries have been neglected for many years, and are largely absent from child survival initiatives presently on the global agenda. Through this World report on child injury prevention, the World Health Organization, the United Nations Children's Fund and many partners have set out to elevate child injury to a priority for the global public health and development communities. The knowledge and experience of nearly two hundred experts from all continents and various sectors were invaluable in grounding the report in the realities faced in many countries. This World report on child injury prevention should be seen as a complement to the UN Secretary-General's study on violence against children released in late 2006. That report addressed violence-related or intentional injuries. Both reports suggest that child injury and violence prevention programmes need to be integrated into child survival and other broad strategies focused on improving the lives of children. Evidence demonstrates the dramatic successes in child injury prevention in countries which have made a concerted effort. These results make a case for increasing investments in human resources and institutional capacities. This would permit the development, implementation and evaluation of programmes to stem the tide of child injury and

enhance the health and well-being of children and their families the world over. Implementing proven interventions could save more than a thousand children's lives a day." - p. vii.
