You Can Go Home Now

The fifth novel in Isaac Asimov's classic science-fiction masterpiece, the Foundation series Golan Trevize, former Councilman of the First Foundation, has chosen the future, and it is Gaia. A superorganism, Gaia is a holistic planet with a common consciousness so intensely united that every dewdrop, every pebble, every being, can speak for all--and feel for all. It is a realm in which privacy is not only undesirable, it is incomprehensible. But is it the right choice for the destiny of mankind? While Trevize feels it is, that is not enough. He must know. Trevize believes the answer lies at the site of humanity's roots: fabled Earth . . . if it still exists. For no one is sure where the planet of Gaia's first settlers is to be found in the immense wilderness of the Galaxy. Nor can anyone explain why no record of Earth has been preserved, no mention of it made anywhere in Gaia's vast world-memory. It is an enigma Trevize is determined to resolve, and a quest he is determined to undertake, at any cost.

Daphne Byrne (Hill House Comics)

All of society believes former actress Helen Grey to be mad, but after a decade imprisoned in a crumbling Yorkshire asylum, she's managed to cling to sanity. When a new doctor arrives, she finally sees an opportunity for freedom and she'll do anything to not let it slip between her fingers. Dr. William Carter knows Miss Grey is using him, but he can't blame her. She's no madder than he is yet she's spent years in this place. He'll help her escape, but they can't cross the line and give into temptation--no matter how much he would like. Helen and Will need to work together if she's ever going to be free. It won't be easy, not when her mysterious benefactor is determined to keep her locked up and hidden from society forever. When Helen is entangled in her own trap and begins to fall for Will too, she must fight not only for her liberty but for her right to love.

Joey Yap's 60 Pillars Life Analysis Method is a refined and enhanced technique that are based on the fundamentals set by the true masters of olden times, and modified to fit to the sophistication of current times.

Lost in the Wild

This book serves as a one-semester introductory course in number theory. Throughout the book, Tattersall adopts a historical perspective and gives emphasis to some of the subject's applied aspects, highlighting the field of cryptography. At the heart of the book are the major number theoretic accomplishments of Euclid, Fermat, Gauss, Legendre, and Euler, and to fully illustrate the properties of numbers and concepts developed in the text, a wealth of exercises has been included. The reader should have "pencil in hand" and ready access to a calculator or computer. For students new to number theory, whatever their background, this is a stimulating and entertaining introduction to the subject.

Support Structures

A gripping supernatural mystery and romance set in post-Katrina New Orleans. Rebecca couldn't feel more out of place in New Orleans. She's staying in a creepy house with her aunt, who reads tarot cards. And at the snooty prep school, a pack of filthy-rich girls treat Rebecca like she's invisible. Only gorgeous, unavailable Anton Grey gives Rebecca the time of day, but she wonders if he's got a hidden agenda. Then one night, among the oak trees in Lafayette Cemetery, Rebecca makes a friend. Sweet, mysterious Lisette is eager to show Rebecca the nooks and crannies of New Orleans. There's just one catch. Lisette is a ghost.

In this sweeping and enchanting tale of romance and second chances, Judith McNaught shows us yet again that love is the greatest gift of all and that she truly 'is in a class by herself' (USA TODAY). Corey Foster is the young creative genius and vision behind Foster's Beautiful Living magazine and the enormous Foster lifestyle empire. While her stepsister Diana handles the business side of things, Corey is responsible for the distinctive look of the magazine. She is just beginning work on the pilot episode of their first wedding-based reality TV show when Diana lands the rights for them to film one of the most glamorous weddings of the year. But there's a pretty big catch - the weekend will reunite Corey with an old flame. The one that got away. The one who incinerated her heart several years before . . . From the sensational #1 New York Times bestselling author of EVERY BREATH YOU TAKE and PARADISE, comes her new novel, perfect for the holiday season.

Elementary Number Theory in Nine Chapters

In this smart, relevant, unputdownable psychological thriller, a woman cop is on the hunt for a killer while battling violent secrets of her own. "My name is Nina Karim. I am a single thirty-one-year-old woman who likes cats, Ryan Reynolds movies, beautiful sunsets, walking on a wintry beach holding hands with a tall, caring, lightly bearded third-wave feminist. Yeah, right." Nina is a tough Queens detective with a series of cold case homicides on her desk - men whose widows had the same alibi: they were living in Artemis, a battered women's shelter, when their husbands were killed. Nina goes undercover into Artemis. Though she is playing the victim, she's anything but. Nina knows about violence and the bullies who rely on it because she's experienced it in her own life. In this heart-pounding thriller Nina confronts the violence of her own past in Artemis where she finds solidarity with a community of women who deal with abusive and lethal men in their own way. For the women living in Artemis there is no absolute moral compass, there is the law and there is survival. And, for Nina, who became a cop so she could find the man who murdered her father, there is only revenge.

Since the first papers by E. N. Leith and J. Upatnieks on the subject of holography appeared in 1961, there has been a virtual explosion of research activity in the field. More than 500 papers and articles on holography have appeared in the last ten years. Many applications of holography have been proposed, and some of these are beginning to enter the realm of usefulness. One of the applications that appears to hold great promise is acoustic imaging by means of holography. The first papers on this subject appeared in 1966. but already research activity in the field is burgeoning. Three symposia devoted to acoustical holography have been held and the papers published in book form. The purpose of this book is to bring together the results of research in acoustical holography, some of it as yet unpublished, under one cover so that workers in holography, nondestructive

testing, medical imaging, underwater imaging, and seismic exploration can decide whether this new technique can be useful to them.

"Support structures is a manual for what bears, sustains, props and holds up. It is the culminations of many endeavours. The first is the collaborative project "Support Structures" by Céline Condorelli and Gavin Wade from 2003-2009. The second is a critical enquiry by Condorelli that exposes an almost complete absence of literature or theory of what constitutes "support". This book is itself articulated as a supporting structure, a manual for engagement in and with its subject, which attempts both functionally and structurally to operate much like it."--Foreword.

Learning to Read in a Digital World

The special problems and opportunities presented by island tourism are major new areas of interest for both tourism academics and professionals, prompting much discussion and debate. This is the first book to focus on how management and organisational issues affect small islands and their tourism industries, and to examine the factors which affect tourism on small islands. International contributors, including practitioners and researchers examine this important topic and discuss a diversity of inter-related themes, including policy areas; public/private sector planning partnerships; product development; marketing; human resource management; and sustainability. These general issues are complemented with case studies which illustrate the application of island management principles. For undergraduates, graduates and professionals in the tourism field, this book is an essential guide to island tourism management.

With digital screens becoming increasingly ubiquitous in the lives of children, from their homes to their classrooms, understanding the influence of these technologies on the ways children read takes on great importance. The aim of this edited volume is to examine how advances in technology are shaping children's reading skills and development. The chapters in this volume explore the influence of various aspects of digital texts, the child's cognitive and motivational skills, and the child's environment on reading development in digital contexts. Each chapter draws upon the expertise of scientists and researchers across countries and disciplines to review what is currently known about the influence of technology on reading, how it is studied, and to offer new insights and research directions based on recent work.

An Heir for the Millionaire

Guided by problems that frequently arise in actual practice, James Higgins' book presents a wide array of nonparametric methods of data analysis that researchers will find useful. It discusses a variety of nonparametric methods and, wherever possible, stresses the connection between methods. For instance, rank tests are introduced as special cases of permutation tests applied to ranks. The author provides coverage of topics not often found in nonparametric textbooks, including procedures for multivariate data, multiple regression, multi-factor analysis of variance, survival data, and curve smoothing. This truly modern approach teaches non-majors how to analyze and interpret data with nonparametric procedures using today's computing technology.

The Madness of Miss Grey

"Ashes of the Sun is fantasy at its finest"--Nicholas Eames, author of Kings of the Wyld Long ago, a magical war destroyed an empire, and a new one was built in its ashes. But still the old grudges simmer, and two siblings will fight on opposite sides to save their world in the start of Django Wexler's new epic fantasy trilogy. Gyre hasn't seen his beloved sister since their parents sold her to the mysterious Twilight Order. Now, twelve years after her disappearance, Gyre's sole focus is revenge, and he's willing to risk anything and anyone to claim enough power to destroy the Order. Chasing rumors of a fabled city protecting a powerful artifact, Gyre comes face-to-face with his lost sister. But she isn't who she once was. Trained to be a warrior, Maya wields magic for the Twilight Order's cause. Standing on opposite sides of a looming civil war, the two siblings will learn that not even the ties of blood will keep them from splitting the world in two.

Manual of Practical Medicine

Calibre Manual

Demeter's search for Persephone, her daughter lost in the underworld, inspired the Eleusinian Mysteries, a nine day celebration so powerful and awe-inspiring much of it remains a secret to this day. Now, in a radical reimagining of this potent and ancient story, renowned novelist and mythologist Kim Antieau updates the tale for modern sensibilities through the life cycle of a most remarkable creature: the salmon. Salmon live in two worlds: salt water and fresh water. They are shapeshifters, transformers, and finally, pilgrims searching for home. Relying on ancient sources and modern speculation, Antieau writes about what happened during the nine day celebration of the Eleusinian Mysteries and offers a template for creating your own mysteries to celebrate and honor the cycles of Nature, your community, and your life. The Salmon Mysteries is mystical inspiration and a practical tool for transforming your life and your community.

Archaeological Networks and Social Interaction focuses on conceptualisations of human interaction, human-thing entanglement, material affordances and agency. Network concepts in the archaeological discipline are ubiquitous these days. They range from loose concepts, used as metaphors to address a notion of connectivity, to highly formal and mathematically complex predictions of human behaviour. These different networked worlds sometimes clash and rarely converge. Archaeologists interested in network analysis, however, have achieved a much better understanding of the implications of adopting formal methods for studying social interaction and there have been theoretical advancements realising a better

synergy between different theoretical perspectives. These nascent concerns are explored further in this volume with regional specialists exploring case studies from Prehistory to the Middle Ages throughout the Ancient and New Worlds, outlining how formal network approaches contribute to studying social interaction archaeologically. This book will be of interest to archaeologists wishing to access the latest research on networks and interconnectivity and how these approaches have been productively modified to archaeological research.

In 1930, Bob Brown predicted that the printed book was bound for obsolescence. The time has come, he insisted, to rid the reader of the cumbersome book. He invented a machine that would allow one to read books and any text extremely fast and in a hyper abbreviated form. He called these abbreviated texts, with em dashes replacing words: readies. He envisioned sending the condensed texts through wireless networks. *The Readies*, describes these eponymously named abbreviated texts and his plans for a reading machine, but since he printed only 150 copies, the volume is practically unknown outside of a small circle of scholars. With this new edition, Craig Saper hopes to introduce Bob Brown's Roving Eye Press books to a new generation of readers.
