The sharing economy's unique customer-to-company exchange is possible because of the way in which money has evolved. These transactions have not always been as fluid as they are today, and they are likely to become even more fluid. It is therefore critical that we learn to appreciate money's elastic nature as deeply as do Uber, Airbnb, Kickstarter, and other innovators, and that we understand money's transition from hard currencies to cryptocurrencies like Bitcoin if we are to access their cooperative potential. The Evolution of Money illuminates this fascinating reality, focusing on the tension between currency's real and abstract properties and advancing a vital theory of money rooted in this dual exchange. It

begins with the debt tablets of Mesopotamia and follows with the development of coin money in ancient Greece and Rome, gold-backed currencies in medieval Europe, and monetary economics in Victorian England. The book ends in the digital era, with the cryptocurrencies and service providers that are making the most of money's virtual side and that suggest a tectonic shift in what we call money. By building this organic time line, *The Evolution of Money* helps us anticipate money's next, transformative role.

While considerable evidence indicates that school leaders are able to make important contributions to the success of their students, much less is known about how such contributions are made. This book provides a comprehensive account of research aimed at filling this gap in our knowledge, along with guidelines about how school leaders might use this knowledge for their own school improvement work. Leadership practices known to be effective for improving student success are outlined in the first section of the book while the remaining sections identify four “paths” along which the influence of those practices “flow” to exercise an influence on student success. Each of the Rational, Emotional, Organizational and Family paths are populated by conditions or variables known to have relatively direct effects on student success and also open to influence by effective leadership practices. While the Four Path framework narrows the attention of school leaders

### **E-Commerce 2015, Global Edition**

This book by Lionel Robbins first appeared in 1932 as an outstanding English-language statement of the Misesian view of economic method, namely that economics is a social science and must advance its propositions by means of deductive reasoning and not through the methods used in the natural sciences. The case is argued here with patience and attention to scholarly details. The unfortunate second edition of this book, which is more available today, introduces confusions by departing from Austrian microeconomic theory. Thus does the Mises Institute celebrate the 75th anniversary of the first edition with this reprint. "Reading Robbins," writes Samuel Bostaph of the University of Dallas, "is an excellent way of contrasting his explanation of the basic nature of economics with that of the Austrian School, as found in the work of Mises as an extension of Carl Mengers's foundations. Such a reading wonderfully clarifies one's understanding of the basic conception of economics as a science of human action, rather than one of mere 'economizing.' "
