Seminar paper from the year 2020 in the subject Learning materials - English, grade: 1.3, University of Cologne, language: English, abstract: This paper firstly compares and contrasts the phonetic and phonological systems of English and German and then goes on to describe some frequently occurring problems concerning pronunciation and non-native accents of German ESL students. Some of the factors leading to the problems that will be scrutinized are interference of German, learners' attitudes and insufficient knowledge of phonetics and phonology systems of the English language, among others. Moreover, the concept of what is commonly referred to as the aptitude for (phonetic) mimicry will be illuminated and discussed from different viewpoints, taking into account the origin of the term and its applicability to linguistics, particularly within the fields of phonetics and phonology. One of the objectives of this paper will thus be to determine possible factors affecting learners' pronunciation competence and to examine to what extent formal instruction in phonetics and phonology can alleviate certain pronunciation difficulties. To that end, a small-scale study was designed and conducted at the University of Cologne with first- and second-year English students, five of whom had not yet taken the Practical Phonetics & Phonology (PPP) course that forms an obligatory part of the English Studies Bachelor's Degree Program and five who had taken it during the previous semester and had passed the end-of-module exam.

Working Papers on Bilingualism

The essays which Bentham collected together for publication in 1830 under the title of *Official Aptitude Maximized; Expense Minimized*, written at various times between 1810 and 1830, deal with the means of achieving efficient and economical government. In considering a wide range of themes in the fields of constitutional law, public finance, and legal reform, Bentham places the problem of official corruption at the centre of his analysis. He contrasts his own recommendations for good administration, which he had fully developed in his magisterial *Constitutional Code*, with the severe deficiencies he saw in English practice. The core of the volume consists of four major essays directed against the principles and policies of four leading statesmen: Edmund Burke, George Rose, Robert Peel, and Lord Chancellor Eldon. Of particular concern to Bentham were the abuses sanctioned by the judges and their officials in the Westminster Hall courts, which, he argues, resulted in the denial of justice to the majority of the population. In this volume, Bentham not only displays the precise logical reasoning for which he is well known, but also his considerable skills as a rhetorician of reform.

"The purpose of this project was to develop an agenda for Special Forces (SF) selection and classification research. Job analysis data, interviews, field observation, and expert judgments about the quality of measures formed the foundation for the Roadmap. The resulting Roadmap is composed of eight projects. Projects 1 and 2, Concurrent Criterion-Related Validation of Readily Available Predictor Measures Against on the Job Performance and Development and Implementation of Content Valid Job Sample Tests, supplement SF selection and classification with measures of leadership, temperament, and communication and analytic skills that could be implemented quickly. Project 3, Validation of Measures of Conventional Army Task Proficiency, Experience and Preference Against Training Performance, addresses the fit between individuals and SF Jobs. Project 4, Validation of Training Performance Against on the Job Performance, would evaluate the usefulness of training data for predicting job performance. Project 5, Predictive Validation of All Predictors Against on the Job Performance, the ultimate test of any selection system, requires maintaining databases for validation purposes. Projects 6-8 involve the development of information to facilitate decision making at the U.S. Army John F. Kennedy Special Warfare Center and School. The are: Development of a Selection and Training Decision Simulator (Project 6), Review of New Measures of Leader Problem Solving Performance (Project 7), and Training Performance Study (Project 8)."--DTIC.

Psychological Testing in the Service of Disability Determination

Methods in current instructed second language acquisition research range from laboratory experiments to ethnography using non-obtrusive participant observation, from cross-sectional designs to longitudinal case studies. Many different types of data serve as the basis for analysis, including reaction times measurements, global test scores, paper and pencil measures, introspective comments, grammaticality judgements, as well as textual data (elicited or naturalistic, oral or written, relating to comprehension or production). Some studies rely on extensive quantification of data, while others may favour a more qualitative and hermeneutic analytic approach. Many of these issues and methods are exemplified by the contributions to this volume. Data-based studies included here deal with the acquisition of specific linguistic phenomena (e.g. verb and noun morphology, lexicon, clause structures) in a range of target languages (e.g. English, French, German, Russian) from a variety of settings involving different instructional approaches (e.g. traditional foreign language classes, immersion classes, intensive ESL classes, content and language integrated language classes). Collectively, the chapters in this book illustrate the productivity and diversity of current research on instructed second language acquisition. As such they serve as a valuable resource for researchers in SLA, psycholinguistics, linguistics, and language education.

The United States Social Security Administration (SSA) administers two disability programs: Social Security Disability Insurance (SSDI), for disabled individuals, and their dependent family members, who have worked and contributed to the Social Security trust funds, and Supplemental Security Income (SSSI), which is a means-tested program based on income and financial assets for adults aged 65 years or older and disabled adults and children. Both programs require that claimants have a disability and meet specific medical criteria in order to qualify for benefits. SSA establishes the presence of a medically-determined impairment in individuals with mental disorders other than intellectual disability through the use of standard diagnostic criteria, which include symptoms and signs. These impairments are established largely on reports of signs and symptoms of impairment and functional limitation. Psychological Testing in the Service of Disability Determination considers the use of psychological tests in evaluating disability claims submitted to the SSA. This report critically reviews selected psychological tests, including symptom validity tests, that could contribute to SSA disability determinations. The report discusses the possible uses of such tests and their contribution to disability determinations. Psychological Testing in the Service of Disability Determination discusses testing norms, qualifications for administration of tests, administration of tests, and reporting results. The recommendations of this report will help SSA improve the consistency and accuracy of disability determination in certain cases.
