Motivation in Second Language Acquisition

This book will be of special interest to English teachers and those in professional development in the region and/or who have classrooms with Asian learners. Paradigms appear to be shifting in Asian L2 learning in a region providing huge growth in English education. This will have an important bearing on the profession, including researchers, worldwide

Task-based Language Learning and Teaching

This edited collection of empirical studies examines the link between interaction and second language learning. The studies provide readers with insights into a wide variety of issues at the centre of current research into the relationship between conversational interaction and second language learning outcomes.

Language Teaching Research and Language Pedagogy

This book explores the relationship between research, teaching, and tasks, and seeks to clarify the issues raised by recent work in this field. The book shows how research and task-based teaching can mutually inform each other and illuminate the areas of task-based course design, methodology, and assessment. The author brings an accessible style and broad scope to an area of contemporary importance to both SLA and language pedagogy.

Second Language Acquisition

This book is a thorough revision of the highly successful text first published in 1994. The authors retain the multidisciplinary approach that presents research from linguistics, sociology, psychology, and education, in a format designed for use in an introductory course for undergraduate or graduate students. The research is updated throughout and there are new sections and chapters in this second edition as well. New chapters cover child language acquisition (first and second), Universal Grammar, and instructed language learning; new sections address issues, such as what data analysis doesn't show, replication of research findings, interlanguage transfer (multilingual acquisition and transfer), the aspect hypothesis, general nativism, connectionist approaches, and implicit/explicit knowledge. Major updates include nonlanguage influences and the lexicon. The workbook, *Second Language Learning Data Analysis, Second Edition*, makes an ideal accompaniment to the text.

SLA Research and Language Teaching

Task-based language teaching is now a well-established pedagogic approach but problematic issues remain, such as whether it is appropriate for all learners and in all instructional contexts. This book draws on the author's experience of working with teachers, together with his knowledge of relevant research and theory, to examine the key issues. It proposes flexible ways in which tasks can be designed and implemented in the language classroom to address the problems that teachers often face with task-based language teaching. It will appeal to researchers and teachers who are interested in task-based language teaching and the practical and theoretical issues involved. It will also be of interest to students and researchers working in the areas of applied linguistics, TESOL and second language acquisition.

Second Language Acquisition in Context

Form-Focused Instruction and Second Language Learning

Classroom Second Language Development

How does classroom language learning take place? How does an understanding of second language acquisition contribute to language teaching? In answering these questions, Rod Ellis reviews a wide range of research on classroom learning, developing a theory of instructed second language acquisition that has significant implications for language teaching. The early chapters of this book trace the attempts to explain classroom language learning in terms of general theory of learning (behaviorism) and the study of naturalistic language learning. The middle chapters document the attempts of researchers to enter the "black box" of the classroom in order to describe the teaching-learning behaviors that take place there and to investigate to what extent and in what ways instruction results in acquisition. The book concludes with a theory of classroom language learning. This theory advances an explanation of the relationship between explicit and implicit linguistic knowledge and in so doing accounts for how both form-focused and meaning-focused instruction contribute to second language acquisition in the classroom.

Understanding Second Language Acquisition

Seminar paper from the year 2009 in the subject English - Pedagogy, Didactics, Literature Studies, printed single-sided, grade: 1,3, University of Hildesheim (Englisch als Fremdsprache), course: Language Acquisition, language: English, comment: Eine englischsprachige Arbeit über Motivation im Zweitspracherwerb., abstract: This paper is about motivation in second language acquisition. First the term "motivation" will be defined and explained. Afterwards this paper will explain what different kinds of motivation exist and how they help to learn language. I will focus on the work of Rod Ellis and Robert C. Gardner as well as the works of Kimberly A. Noels. The final part of the paper will discuss motivation in the classroom and how to improve the motivation of students as a teacher. For this part I will focus on the works of J. Brophy. Motivation is often named together with aptitude. Therefore it is vital to define the difference between aptitude and motivation. Ellis (2008:75) states while aptitude describes the "cognitive abilities that underlie successful L2 acquisition, motivation involves the attitudes and affective states that influence the degree of effort that learners make to learn an L2." So aptitude is a more or less stable component which the individual can not directly interfere with. Motivation on the other hand is a component that can change comparatively fast and can be altered by the learner himself. Gardner (2001) writes that motivation describes the driving force behind the effort of a learner. Motivation consists of three elements. The first element is "effort." A more motivated learner will put more effort in his or her studies. He will be open to do extra work in order to improve his language skills, spend more time with studying for the language and even deal with the subject on a subconscious level. []"

Second Language Learning Data Analysis

Now in its second edition, Introduction to Instructed Second Language Acquisition continues to present a cohesive view of the different theoretical and pedagogical perspectives that comprise instructed second language acquisition (ISLA). Loewen provides comprehensive discussions of the theoretical, empirical, and pedagogical aspects of a range of key issues in ISLA, and has added to this edition a comprehensive exploration of the relationship between ISLA research and second language pedagogy. Also new is the addition of supporting features including end-of-chapter activities, points for reflection, and discussion questions, as well as thoroughly revised content to reflect the most recent research in ISLA. This is an essential resource for students new to ISLA, or working in Second Language Acquisition more generally.

Alternative Approaches to Second Language Acquisition

This book offers a succinct theoretical introduction to the basic concepts in language testing in a way that is easy to understand. In the Japanese context, this book is highly recommended for university faculty members involved in obtaining assessment literacy, teachers who want to validate their exploratory teaching and testing, or applied linguistics students new to the language testing field. The book is divided into four main sections. The first provides an overview of the principles of language testing. The next contains short extracts from the testing literature with questions which stimulate further thinking. Section 3 is a list of references with brief annotations and Section 4 a glossary of referenced testing terms.

Understanding Second Language Acquisition

This book examines different theoretical perspectives on the role that interaction plays in second language acquisition. The principal perspectives are those afforded by the Interaction Hypothesis, Socio-Cultural Theory and the Levels of Processing model. Interaction is, therefore, defined broadly; it is seen as involving both intermental and intramental activity. The theoretical perspectives are explored empirically in a series of studies which investigate the relationship between aspects of interaction and second language acquisition. A number of these studies consider the effects of interaction on the acquisition of vocabulary (word meanings) by both adult and child L2 learners. In addition, the effects of language aptitude on input processing are considered. Further studies consider the contribution that interaction makes to the acquisition of grammatical knowledge. These studies provide clear evidence that social and intermental interaction are major forces in the acquisition of an L2. Finally, the book, considers a number of pedagogic specifications. In particular, the importance of discourse control as a means of learners' obtaining the quality of interaction likely to foster acquisition is discussed.

The Study of Second Language Acquisition in the Asian Context

The first section of this book outlines a general framework for the study of second language acquisition. Subsequent sections provide a description of learner language, account for the role of the linguistic environment, examine the learner's internal mechanisms, explore individual differences in language learning, and review the expanding research on classroom second language acquisition. First Prize English Speaking Union's Duke of Edinburgh Book Competition

Introduction to Instructed Second Language Acquisition

Readership: Graduate students, teachers, researchers in Applied Linguistics

Analysing Learner Language

Routledge Introductions to Applied Linguistics is a series of introductory level textbooks covering the core topics in Applied Linguistics, primarily designed for those beginning postgraduate studies, or taking an introductory MA course as well as advanced undergraduates. Titles in the series are also ideal for language professionals returning to academic study. The books take an innovative 'practice to theory' approach, with a 'back-to-front' structure. This leads the reader from real-world problems and issues, through a discussion of intervention and how to engage with these concerns, before finally relating these practical issues to theoretical foundations. Additional features include a glossary of key terms, and discussion questions. Following the back-to-front approach of the series, the book takes problematic issues in language pedagogy as its starting points. These are then examined in terms of second language acquisition. Each chapter begins with a look at the pedagogical proposals found in teacher guides and then asks 'Do these proposals accord with what we know about how languages are acquired?' Pedagogical topics covered include teaching methods, syllabus design, explicit instruction, comprehension versus production-based instruction, task-based instruction, authentic materials, the role of the learners' first language in the classroom, error correction and catering for individual differences. Including a glossary of key terms and questions for discussion at the end of each chapter, and assuming no prior knowledge of second language acquisition, this is the ideal text for all students studying language teaching methods, language teacher education, English teaching methodology and second language acquisition modules in advanced undergraduate and postgraduate/graduate TESOL and Applied Linguistics courses.

Understanding Second Language Acquisition 2nd Edition - Oxford Applied Linguistics

This volume presents six alternative approaches to studying second language acquisition – 'alternative' in the sense that they contrast with and/or complement the cognitivism pervading the field. All six approaches – sociocultural, complexity theory, conversation-analytic, identity, language socialization, and sociocognitive – are described according to the same set

of six headings, allowing for direct comparison across approaches. Each chapter is authored by leading advocates for the approach described: James Lantolf for the sociocultural approach; Diane Larsen-Freeman for the complexity theory approach; Gabriele Kasper and Johannes Wagner for the conversation-analytic approach; Bonny Norton and Carolyn McKinney for the identity approach; Patricia Duff and Steven Talmy for the language socialization approach and Dwight Atkinson for the sociocognitive approach. Introductory and commentary chapters round out this volume. The editor's introduction describes the significance of alternative approaches to SLA studies given its strongly cognitivist orientation. Lourdes Ortega's commentary considers the six approaches from an 'enlightened traditional' perspective on SLA studies – a viewpoint which is cognitivist in orientation but broad enough to give serious and balanced consideration to alternative approaches. This volume is essential reading in the field of second language acquisition.

Second Language Acquisition & Language Pedagogy

The present volume examines the relationship between second language practice and what is known about the process of second language acquisition, summarising the current state of second language acquisition theory, drawing general conclusions about its application to methods and materials and describing what characteristics effective materials should have. The author concludes that a solution to language teaching lies not so much in expensive equipment, exotic new methods, or sophisticated language analysis, but rather in the full utilisation of the most important resources - native speakers of the language - in real communication.

Second Language Acquisition

Collected papers address various research issues and their relevance to language pedagogy. Topics discussed include interaction, formal instruction, variability and learning styles. The book begins with an overview of the development of second language acquisition research.

Modelling and Assessing Second Language Acquisition

This book looks at the role of cultural studies and intercultural communication in language learning. The book argues that learners who have an opportunity to stay in the target language country can be trained to do an ethnographic project while abroad. Borrowing from anthropologists' the idea of cultural fieldwork and 'writing culture', language learners develop their linguistic and cultural competence through the study of a local group. This book combines a theoretical overview of language and cultural practices with a description of ethnographic approaches and materials specifically designed for language learners.

Second Language Acquisition

Learning a Second Language through Interaction

This book forms an invaluable reference work for all teachers of second languages and researchers in the field of L2 acquisition. It discusses the contribution that modern research into L2 acquisition makes to the curriculum development process. It also provides the reader with arguments for and against the various approaches to teaching.

Second Language Acquisition

How does classroom language learning take place? How does an understanding of second language acquisition contribute to language teaching? In answering these questions, Rod Ellis reviews a wide range of research on classroom learning, developing a theory of instructed second language acquisition which has significant implications for language teaching.

Second language acquisition

Planning and Task Performance in a Second Language

An up-to-date account of the main problems and theoretical and practical issues raised by second language acquisition research. As such, this introduction provides students with a "real" understanding of the fundamental topics in the field and the advances achieved by empirical research.

Reflections on Task-Based Language Teaching

A comprehensive account of the research and practice of task-based language teaching.

Instructed Second Language Acquisition

Becoming and Being an Applied Linguist contains narrative accounts of the lives of thirteen well-established applied linguists. Their professional autobiographies document the development of some of the key areas of applied linguistics -

second, language acquisition, motivation, grammar, vocabulary, testing, second language writing, second language classroom research, practitioner research, English as a lingua franca, teacher cognition, and computer-assisted language learning. The book tells how these applied linguists grew into their areas of specialization. It will be of interest to any would-be applied linguist. The book also provides a readable overview of the whole field that will be of value to students of applied linguistics.

Defining Issues in English Language Teaching

In the 30 years since Rod Ellis first published the award-winning *Understanding Second Language Acquisition*, it has become a classic text. This new, fully updated edition continues to provide an authoritative and highly readable introduction to key areas of theory and research in second language acquisition. Ellis presents a comprehensive overview of the different theories in this field and examines critical reactions to them. The book reflects recent trends in looking at cognitive and social aspects of second language acquisition, as well as examining the roles played by implicit and explicit instruction in language learning. "An excellent and much-needed, in-depth review of the research on how children and literate adults learn a second language. Ellis provides a sound knowledge base for language teachers and beginning graduate students in applied linguistics, focusing on relevant findings of research on second-language learning by children and literate adults in both naturalistic and instructed contexts." Elaine Tarone, Director of the Center for Advanced Research on Language Acquisition, University of Minnesota Additional online resources are available at www.oup.com/elt/teacher/understandingsla Rod Ellis is the Distinguished Professor of Applied Language Studies in the School of Cultures, Languages and Linguistics in the University of Auckland. Oxford Applied Linguistics Series Advisers: Anne Burns and Diane Larsen-Freeman.

Principles and Practice in Second Language Acquisition

Whether we grow up with one, two, or several languages during our early years of life, many of us will learn a second, foreign, or heritage language in later years. The field of Second language acquisition (SLA, for short) investigates the human capacity to learn additional languages in late childhood, adolescence, or adulthood, after the first language --in the case of monolinguals-- or languages --in the case of bilinguals-- have already been acquired. *Understanding Second Language Acquisition* offers a wide-encompassing survey of this burgeoning field, its accumulated findings and proposed theories, its developed research paradigms, and its pending questions for the future. The book zooms in and out of universal, individual, and social forces, in each case evaluating the research findings that have been generated across diverse naturalistic and formal contexts for second language acquisition. It assumes no background in SLA and provides helpful chapter-by-chapter summaries and suggestions for further reading. Ideal as a textbook for students of applied linguistics, foreign language education, TESOL, and education, it is also recommended for students of linguistics,

developmental psycholinguistics, psychology, and cognitive science. Supporting resources for tutors are available free at www.routledge.com/ortega.

The Routledge Handbook of Instructed Second Language Acquisition

This book examines current research centered on the second language classroom and the implications of this research for both the teaching and learning of foreign languages. It offers illuminating insights into the important relationship between research and teaching, and the inherent complexities of the teaching and learning of foreign languages in classroom settings. Offers an accessible overview of a range of research on instruction and learning in the L2 classroom Bridges the relationship between research, teachers, and learners Helps evolve the practice of dedicated current language teachers with research findings that suggest best practices for language teaching

Understanding Second Language Acquisition

Exploring Language Pedagogy through Second Language Acquisition Research

The last decade has seen a growing body of research investigating various aspects of L2 learners' performance of tasks. This book focuses on one task implementation variable: planning. It considers theories of how opportunities to plan a task affect performance and tests claims derived from these theories in a series of empirical studies. The book examines different types of planning (i.e. task rehearsal, pre-task planning and within-task planning), addressing both what learners do when they plan and the effects of the different types of planning on L2 production. The choice of planning as the variable for investigation in this book is motivated both by its importance for current theorizing about L2 acquisition (in particular with regard to cognitive theories that view acquisition in terms of information processing) and its utility to language teachers and language testers, for unlike many other constructs in SLA 'planning' lends itself to external manipulation. The study of planning, then, provides a suitable forum for demonstrating the interconnectedness of theory, research and pedagogy in SLA.

Conversational Interaction in Second Language Acquisition - Oxford Applied Linguistics

Second language acquisition

Implicit/ explicit knowledge constitutes a key distinction in the study of second language acquisition. This book reports a project that investigated ways of measuring implicit/explicit L2 knowledge, the relationship between the two types of knowledge and language proficiency, and the effect that different types of form-focused instruction had on their acquisition.

Task-Based Language Teaching

Becoming and Being an Applied Linguist

Understanding Second Language Acquisition

The purpose of this workbook is to provide students with practice in analyzing second language data. For the student of second language learning, "hands-on" experience with actual data is essential in understanding the processes involved in learning a second language. Working through exemplars of the kinds of interlanguages that learners do and do not create brings about a clearer understanding of the principles underlying these interlanguages, as well as the universal principles of language learning (those that are independent of particular languages and interlanguages). The goal in this workbook is to present data organized in such a way that by working through pedagogically presented data-sets, students are led to a discovery and understanding of theoretical and/or methodological issues. In addition, they acquire the ability to interpret data and to begin to draw conclusions from them. The authors intend that students should go from the data to a conclusion that includes a 3-part statement: *what else you should want to know about these data; *why this, specifically, and not something else; and *how one can empirically research what you want to find out. This sequence of questions forces students to constantly keep in mind the important question of falsification: What kind of data would it take to falsify the particular conclusions the students come to? As with the earlier edition of this workbook (Sorace, Gass, & Selinker), two audiocassettes provide language samples for use in the exercises. These cassettes and the teacher's manual are offered free of charge on adoption of the workbook for classroom use; a three-part set (workbook/manual/tapes) is also available.

Implicit and Explicit Knowledge in Second Language Learning, Testing and Teaching

The core foundations of applied linguistics have long been located in exploring language as it is used in the world and in finding solutions to language-based problems. Modern applied linguistics is interdisciplinary and wide-ranging, being informed by research spanning psycholinguistics, sociolinguistics, education, corpus linguistics, cognitive linguistics, and other areas of the cognitive, learning, and information sciences. The goal of the OUP Applied Linguistics Series is to influence

the quality of language education through publishing and disseminating relevant scholarship and research.

Language Learners as Ethnographers

This text goes back to basics by investigating fundamental assumptions about the way English should be defined and taught as a foreign language. It looks at different attitudes to English teaching, and critically examines proposals for course content.

Instructed Second Language Acquisition

The Routledge Handbook of Instructed Second Language Acquisition is the first collection of state-of-the-art papers pertaining to Instructed Second Language Acquisition (ISLA). Written by 45 world-renowned experts, the entries are full-length articles detailing pertinent issues with up-to-date references. Each chapter serves three purposes: (1) provide a review of current literature and discussions of cutting edge issues; (2) share the authors' understanding of, and approaches to, the issues; and (3) provide direct links between research and practice. In short, based on the chapters in this handbook, ISLA has attained a level of theoretical and methodological maturity that provides a solid foundation for future empirical and pedagogical discovery. This handbook is the ideal resource for researchers, graduate students, upper-level undergraduate students, teachers, and teacher-educators who are interested in second language learning and teaching. .
