The faith in science as an ally of political and economic progress, which Franklin and Jefferson made so firm a part of the American tradition, has been undermined by the very success of the scientific revolution. Has science become so powerful that it cannot be controlled by democratic processes? Is the scientific community acquiring a privileged role in government something like that of the ecclesiastical estate in the medieval world? Writing from first-hand experience in government administration and his service on three presidential advisory panels, as well as from extensive research, Don K. Price describes how science and technology have weakened the independence of private corporations and broken down some of the checks and balances on which we have relied for the protection of freedom. In this connection he recounts the recent attempts to set up a national program of oceanographic research, showing that the more advanced the scientific and technological programs are, the more difficult it is to contain them within the normal departmental structure and the more likely they are to bypass the regular lines of responsibility. He then faces the question of whether science is leading us toward some new type of centralized power in which its own processes, rather than those of representative democracy, will determine our policies. He argues, on the contrary, that the more scientific the sciences become, and the more competent to help in the understanding of public issues, the more freedom of choice they provide for responsible politicians. Science can be translated into political decisions only if its knowledge can be mixed with political purpose. This is done through a

chain of responsibility that runs from the scientists to the professionals (like engineers and physicians), and on to administrators and politicians. Within this set of relations, Mr. Price suggests, we are developing a new system of checks and balances. For whether science leads toward tyranny or freedom depends not on a nation's state of technological progress, but on what it believes. The freedom of science owes less to the nineteenth-century ideas of laissez-faire and parliamentary sovereignty than to the older tradition on which the American revolution based its separation of church and state and its federal system. Mr. Price examines the ways in which the President and Congress make use of scientific advice. He sees less reason to fear that authority will be unduly centralized in either the legislative or executive branch, under the American system, than that executive agencies and Congressional committees with common interests in technological programs may acquire power and influence without adequate responsibility.

From Sunday Times bestselling author Paige Toon comes the first novel in a witty new series, perfect for fans of Geek Girl and Girl Online! Meet Jessie, small-town girl turned wild child... Jessie has never known her real dad, and when her mum dies she thinks any hope of finding him is gone. As she goes off the rails and her life devolves into a wild mess, her stepdad announces that her father is Johnny Jefferson—legendary rock star and former hell-raiser. Still dealing with her loss, and now the daughter of a superstar, Jessie is sucked into the LA lifestyle—paparazzi, parties, and hot guitar-wielding boys included. But is Johnny up to the job of fatherhood? And, more importantly, is Jessie ready for life in the spotlight? “Fun and flirty, Jessie Jefferson is a top-notch series YA fans should grab ASAP.” —Maximum Pop!

Tail of the Moon

At the end of 1912 Jacques Schneider announced his intention of presenting an annual trophy for an international seaplane contest. There were only twelve Schneider contests but they were major international events with the major rivals being Britain and Italy, followed by France and the US. Biplane seaplanes and flying-boats predominated the early contests and some very advanced twin-float

biplanes were among the winners as late as 1925. However, it was the monoplane which was to become the symbol of Schneider Trophy, with Supermarine and Macchi designs reaching the peak of racing seaplane performance. The final winning combination of Supermarine airframe and Rolls-Royce engine was to make a vital contribution to Britain's defence in 1940 in the form of the Rolls-Royce powered Hurricane and Spitfire. This book records the contests and, in considerable detail, the design, development and achievements of the participating aircraft; those which failed to take part; and the projects, some of which embodied very advanced ideas even if they were proved to be unrealistic.

****New Adult Romance**** Needing an escape from her past, Avery chooses a college where no one knows her. Keeping a low profile was the plan, falling for the intense frat boy, Jase wasn't. Yet she can't deny how alive she feels when he's near. Even as common sense implores her to stay away, her body begs her to get closer. Jase, numb from his own family drama, has grown bored with weekends fueled by nameless girls and countless bottles when he meets Avery. Helping her cope with her past is better than dealing with the bullshit his own life's served up. Determined to drive away the painful secret she's guarding, he appoints himself her life coach, and challenges her to new experiences. Getting close to her and being the one to make her smile are simply perks of the job. But when Avery's past boldly saunters in, refusing to be forgotten, can Jase live with the truth about the girl he's fallen for? Recommended for 17+ due to mature themes and sexual content.

This book is a compendium of many of the statistical tools and tests used by quality and engineering professionals. It is a practical handbook that lists significant statistical methods, outlines assumptions for testing, and provides formulas and completed examples. The book is ideal for engineers who know what type of test to perform but need an easy-to-use reference to help complete the task. Readers should have an understanding of basic statistics. A bibliography contains references to texts that can provide the necessary theory and mathematical foundations.

Langston Holiday lives with his no-nonsense mother in the gritty public housing projects of Poindexter Village, better known as "The Vil," after his father abandons them. Without any assistance, his mother is determined to make a man out of Langston—and she's doing a pretty good job. By the end of his senior year, Langston is one of the best high-school basketball players in the nation. That's when he makes the biggest decision of his life: to forgo college and enter the professional ranks. When word hits the streets about Langston's success, his newfound wealth stirs up plenty of envy in the projects, sparking a wave of unthinkable drama and crime. He's being relentlessly pursued by Toy Daniels, a has-been athlete who's determined to sign Langston to his newly formed sports agency. Langston's best friend, Jalen, becomes involved in shady dealings with people who are known for nothing but trouble, and his girlfriend, Tori, is quickly becoming fed up with Langston's wandering ways. Suddenly, Langston doesn't know who he can trust. This gripping novel from bestselling author Franklin White realistically depicts the pitfalls of basketball stardom, when large amounts of money fall into the hands of people who've never known anything but poverty and struggle.

Science is increasingly defined by multidimensional collaborative networks. Despite the unprecedented growth of scientific collaboration around the globe – the collaborative turn – geography still matters for the cognitive enterprise. This book explores how geography conditions scientific collaboration and how collaboration affects the spatiality of science. This book offers a complex analysis of the spatial aspects of scientific collaboration, addressing the topic at a number of levels: individual, organizational, urban, regional, national, and international.

Spatial patterns of scientific collaboration are analysed along with their determinants and consequences. By combining a vast array of approaches, concepts, and methodologies, the volume offers a comprehensive theoretical framework for the geography of scientific collaboration. The examples of scientific collaboration policy discussed in the book are taken from the European Union, the United States, and China. Through a number of case studies the authors analyse the background, development and evaluation of these policies. This book will be of interest to researchers in diverse disciplines such as regional studies, scientometrics, R&D policy, socio-economic geography and network analysis. It will also be of interest to policymakers, and to managers of research organisations.

This book is a selection of results obtained within one year of research performed under SYNAT - a nation-wide scientific project aiming to create an infrastructure for scientific content storage and sharing for academia, education and open knowledge society in Poland. The selection refers to the research in artificial intelligence, knowledge discovery and data mining, information retrieval and natural language processing, addressing the problems of implementing intelligent tools for building a scientific information platform. The idea of this book is based on the very successful SYNAT Project Conference and the SYNAT Workshop accompanying the 19th International Symposium on Methodologies for Intelligent Systems (ISMIS 2011). The papers included in this book present an overview and insight into such topics as architecture of scientific information platforms, semantic clustering, ontology-based systems, as well as, multimedia data processing.

A “cinematic . . . page-turner and a passionate analysis of faith, memory, responsibility, and consequence.”—Molly Antopol, Fiction Writers Review Inspired by and structured around the chamber piece of the same title by the French composer Olivier Messiaen, *Quartet for the End of Time* is a mesmerizing story of four lives irrevocably linked in a single act of betrayal. The novel takes us on an unforgettable journey beginning during the 1930s Bonus Army riots, when World War I veteran Arthur Sinclair is falsely accused of conspiracy and then disappears. His absence will haunt his son, Douglas, as well as Alden and Sutton Kelly, the children of a powerful U.S. congressman, as they experience—each in different ways—the dynamic political social changes that took place leading up to and during World War II. From the New Deal projects through which Douglas, newly fatherless, makes his living to Sutton’s work as a journalist, to Alden’s life as a code breaker and a spy, each character is haunted by the past and is searching for love, hope, and redemption in a world torn apart by chaos and war. Through the lives of these characters, as well as those of their lovers, friends, and enemies, the novel transports us from the Siberian Expedition of World War I to the underground world of a Soviet spy in the 1920s and 1930s, to the occultist circle of P. D. Ouspensky and London during the Blitz, to the German prison camp where Messiaen originally composed and performed his famous *Quartet for the End of*

Time. At every turn, this rich and ambitious novel tells some of the less well-known stories of twentieth-century history with epic scope and astonishing power, revealing at every turn the ways in which history and memory tend to follow us, and in which absence has a palpable presence.
