## **The Works of Henrik Ibsen**

The intricate personal relationships of a notable Alabama family. Known respectively as the chief of the Confederate Ordnance Bureau and as the university librarian, Josiah and Amelia Gorgas were important members of the University of Alabama and regional communities. Their marriage spanned the Civil War and its aftermath and epitomized the Victorian concept of separate spheres for husband and wife. They were two strong personalities who deeply respected and complemented each other. Love and Duty focuses on the couple's relationship as well as their relationships with other Gorgas family members. Because the large but close-knit family was highly literate and often separated, they produced an extraordinary quantity and quality of correspondence and related manuscripts that span three generations. Family members corresponded with each other almost daily. In these letters and in journals, they

commented on contemporary events, gave advice, philosophized about life, death, love, marriage, parenting, war, and defeat. These thousands of documents provide a remarkable window into the private world of a 19th-century southern family. Wiggins examines Josiah's and Amelia's attitudes toward a vast range of topics, but most notably family, which was everything to the couple.

## **Muhyo & Roji's Bureau of Supernatural Investigation, Vol. 7**

Preserving New York is the largely unknown inspiring story of the origins of New York City's nationally acclaimed landmarks law. The decades of struggle behind the law, its intellectual origins, the men and women who fought for it, the forces that shaped it, and the buildings lost and saved on the way to its ultimate passage, span from 1913 to 1965. Intended for the interested public as well as students of New York City history, architecture, and preservation itself, over 100 illustrations help reveal a history richer and more complex than the accepted myth that the landmarks law sprang from the wreckage of the great Pennsylvania Station. Images include those by noted historic photographers as well as those from newspaper accounts of the time. Forgotten civic leaders such as Albert S. Bard and lost buildings including the Brokaw Mansions, are unveiled in an extensively researched narrative bringing this essential episode in New York's history to future generations tasked with protecting the city's landmarks. For the first time, the story of how New York won the right to protect its treasured buildings, neighborhoods and special places is brought together to enjoy, inform, and inspire all who love New York.

## **Stranger by Night**

A groundbreaking exploration of the “science of enlightenment,” told through the lens of the journey of Siddhartha (better known as Buddha), by Guardian science editor James Kingsland. In a lush grove on the banks of the Neranjara in northern India—400 years before the birth of Christ, when the foundations of western science and philosophy were being laid by the great minds of Ancient Greece—a prince turned ascetic wanderer sat beneath a fig tree. His name was Siddhartha Gautama, and he was discovering the astonishing capabilities of the human brain and the secrets of mental wellness and spiritual “enlightenment,” the foundation of Buddhism. Framed by the historical journey and teachings of the Buddha, Siddhartha’s Brain shows how meditative and Buddhist practice anticipated the findings of modern neuroscience. Moving from the evolutionary history of the brain to the disorders and neuroses associated with our technology-driven world, James Kingsland explains why the ancient practice of mindfulness has been so beneficial and so important for human beings across time. Far from a New Age fad, the principles of meditation have deep scientific support and have been proven to be effective in combating many contemporary psychiatric disorders. Siddhartha posited that “Our life is shaped by our mind; we become what we think.” As we are increasingly driven to distraction by competing demands, our ability to focus and control our thoughts has never been more challenged—or more vital. Siddhartha’s Brain offers a cutting-edge, big-picture assessment of meditation and mindfulness: how it works, what it does to our brains, and why meditative practice has never been more important.

Assessments, understood as tools for tracking what and how well students have learned, play a critical role in the classroom. *Developing Assessments for the Next Generation Science Standards* develops an approach to science assessment to meet the vision of science education for the future as it has been elaborated in *A Framework for K-12 Science Education* (Framework) and *Next Generation Science Standards* (NGSS). These documents are brand new and the changes they call for are barely under way, but the new assessments will be needed as soon as states and districts begin the process of implementing the NGSS and changing their approach to science education. The new Framework and the NGSS are designed to guide educators in significantly altering the way K-12 science is taught. The Framework is aimed at making science education more closely resemble the way scientists actually work and think, and making instruction reflect research on learning that demonstrates the importance of building coherent understandings over time. It structures science education around three dimensions - the practices through which scientists and engineers do their work, the key crosscutting concepts that cut across disciplines, and the core ideas of the disciplines - and argues that they should be interwoven in every aspect of science education, building in sophistication as students progress through grades K-12. *Developing Assessments for the Next Generation Science Standards* recommends strategies for developing assessments that yield valid

measures of student proficiency in science as described in the new Framework. This report reviews recent and current work in science assessment to determine which aspects of the Framework's vision can be assessed with available techniques and what additional research and development will be needed to support an assessment system that fully meets that vision. The report offers a systems approach to science assessment, in which a range of assessment strategies are designed to answer different kinds of questions with appropriate degrees of specificity and provide results that complement one another. Developing Assessments for the Next Generation Science Standards makes the case that a science assessment system that meets the Framework's vision should consist of assessments designed to support classroom instruction, assessments designed to monitor science learning on a broader scale, and indicators designed to track opportunity to learn. New standards for science education make clear that new modes of assessment designed to measure the integrated learning they promote are essential. The recommendations of this report will be key to making sure that the dramatic changes in curriculum and instruction signaled by Framework and the NGSS reduce inequities in science education and raise the level of science education for all students.
