Digital Analytics Primer

Online communities generate massive volumes of natural language data and the social sciences continue to learn how to best make use of this new information and the technology available for analyzing it. Text Mining: A Guidebook for the Social Sciences brings together a broad range of contemporary qualitative and quantitative methods to provide strategic and practical guidance on analyzing large text collections. This accessible book, written by sociologist Gabe Ignatow and computer scientist Rada Mihalcea, surveys the fast-changing landscape of data sources, programming languages, software packages, and methods of analysis available today. Suitable for novice and experienced researchers alike, the book will help readers use text mining techniques more efficiently and productively.

Style in Translation: A Corpus-Based Perspective

This text explores ways in which English grammar enables speakers and writers to represent the world, to interact with one another, and to create coherent messages. This book provides second language teachers with a functional description of English grammar, in which grammar is viewed as a communicative resource. Each chapter includes a focus on areas of difficulty for second language learners, numerous authentic examples, tasks that

allow the reader to apply the concepts introduced, and discussion questions. A final chapter covers issues in the learning and teaching of grammar, and reviews methodological options for the second or foreign language classroom. Assuming no previous study of linguistics or English grammar, this book is suitable for self-study or as a textbook in teacher education programs.

Text Complexity

"This book lays the foundations for understanding the concepts and technologies behind the Semantic Web"--Provided by publisher.

Tools for Matching Readers to Texts

Using structuralist and post-structuralist methods, this book analyzes a selection of influential Russian texts—classical, modernist, and contemporary—as dialogues with earlier works, in the light of new cultural contexts.

A Critical Hypertext Analysis of Social Media

The Book of the Old Testament prophet Ezekiel (6th century B.C.E.) is a book of forceful language and impressive images. Its message is often clear, sometimes mysterious. The book had great impact in Jewish and early Christian literature as well as in western art. This book deals with the intentions of the book of Ezekiel, but also focuses on its use by

subsequent writers, editors or artists. It traces Ezekiel's influence in Jesus' teaching about the Kingdom of God, in Paul, the Gospels, and Revelation, and also shows that Ezekiel's imagery, via Jewish mysticism, influenced the visionary art of William Blake. Presenting contributions from leading biblical scholars in Oxford and Leiden, based on their unique collaborative research, this book will be of interest to a wide range of scholars working in the field of biblical studies, including those studying the Hebrew Bible, its early versions, 'inter-testamental' Judaism, New Testament and Early Christianity, and the reception of Biblical literature in later centuries.

Leveled Texts for Mathematics: Data Analysis and Probability

This book constitutes the thoroughly refereed post-proceedings of the 5th International Conference on Application of Natural Language to Information Systems, NLDB 2000, held in Versailles, France, in June 2000. The 29 revised full papers presented together with two invited papers and seven posters and demonstrations have passed through two rounds of reviewing and selection. The book offers topical sections on linguistics in information design, temporal databases, word-sense disambiguation, semantic relationships in databases, semantic and contextual document retrieval, natural language generation for answering email and OLAP, NLP techniques for information retrieval, Web information retrieval, technical databases, users and interactions in Web querying, and conceptual patterns.

The Theory and Analysis of Drama

"Validating Second Language Reading Examinations describes the development of an empirical framework for test validation and comparison of reading tests at different proficiency levels through a critical evaluation of alignment with the Common European Framework of Reference (CEFR). It focuses on contextual parameters, cognitive processing operations and test results and identifies parameters for the description of different levels of reading proficiency examinations. The volume explores procedures for linking tests to the CEFR and proposes both qualitative and quantitative methods that complement the procedures recommended in the Council of Europe's Relating Language Examinations to the Common European Framework of Reference for Languages (CEFR): A Manual, piloted in 2003 and revised 2009. Key features of the book include: - a detailed review of the literature on CEFR alignment, vertical scaling, test specifications and test comparability - a comprehensive and coherent approach to the validation of reading tests - an accessible and systematic description of procedures for collecting validity evidence based on a sound theoretical framework - a case study comparing different testing systems targeting the same CEFR level"--

Computational Linguistics and Intelligent Text Processing

Textual Choices in Discourse

Comprehensively presents the foundations and leading application research in medical informatics/biomedicine. The concepts and techniques are illustrated with detailed case studies. Authors are widely recognized professors and researchers in Schools of Medicine and Information Systems from the University of Arizona, University of Washington, Columbia University, and Oregon Health & Science University. Related Springer title, Shortliffe: Medical Informatics, has sold over 8000 copies The title will be positioned at the upper division and graduate level Medical Informatics course and a reference work for practitioners in the field.

Models of Understanding Text

This anthology presents critical reviews of methods and high-impact applications in computational biology that lead to results that non-bioinformaticians must also know to design efficient experimental research plans. Discovering Biomolecular Mechanisms with Computational Biology explores the methodology of translating sequence strings into biological knowledge and considers exemplary groundbreaking results such as unexpected enzyme discoveries. This book also summarizes non-trivial theoretical predictions for regulatory and metabolic networks that have received experimental confirmation.

Digital Crime and Forensic Science in Cyberspace

This book constitutes the thoroughly refereed post-proceedings of the 6th International Conference on Applications of Natural Language to Information Systems, NLDB 2002, held in Stockholm, Sweden in June 2002. The 17 revised full papers and 7 revised short papers presented were carefully selected from 42 submissions during two rounds of reviewing and revision. The papers are organized in topical sections on linguistic aspects of modeling, information retrieval, natural language text understanding, knowledge bases, recognition of information in natural language descriptions, and natural language conversational systems.

Text Counter Text

This two-volume set, consisting of LNCS 8403 and LNCS 8404, constitutes the thoroughly refereed proceedings of the 14th International Conference on Intelligent Text Processing and Computational Linguistics, CICLing 2014, held in Kathmandu, Nepal, in April 2014. The 85 revised papers presented together with 4 invited papers were carefully reviewed and selected from 300 submissions. The papers are organized in the following topical sections: lexical resources; document representation; morphology, POS-tagging, and named entity recognition; syntax and parsing; anaphora resolution; recognizing textual entailment; semantics and discourse; natural language generation; sentiment analysis and emotion recognition; opinion mining and social networks; machine translation and multilingualism; information retrieval; text

classification and clustering; text summarization; plagiarism detection; style and spelling checking; speech processing; and applications.

Feminism and Film Theory

There is a big difference between assigning complex texts and teaching complex texts No matter what discipline you teach, learn how to use complexity as a dynamic, powerful tool for sliding the right text in front of your students' at just the right time. Updates to this new edition include How-to's for measuring countable features of any written work A rubric for analyzing the complexity of both literary and informational texts Classroom scenarios that show the difference between a healthy struggle and frustration The authors' latest thinking on teacher modeling, close reading, scaffolded small group reading, and independent reading

Discovering Biomolecular Mechanisms with Computational Biology

Beginning in October 2017, the National Academies of Sciences, Engineering, and Medicine organized a set of workshops designed to gather information for the Decadal Survey of Social and Behavioral Sciences for Applications to National Security. The first workshop focused on changing sociocultural dynamics and implications for national security, and this publication summarizes the presentations and discussions from this workshop.

Media in Hong Kong

How can you analyse narratives, interviews, field notes, or focus group data? Qualitative text analysis is ideal for these types of data and this textbook provides a hands-on introduction to the method and its theoretical underpinnings. It offers step-by-step instructions for implementing the three principal types of qualitative text analysis: thematic, evaluative, and type-building. Special attention is paid to how to present your results and use qualitative data analysis software packages, which are highly recommended for use in combination with qualitative text analysis since they allow for fast, reliable, and more accurate analysis. The book shows in detail how to use software, from transcribing the verbal data to presenting and visualizing the results. The book is intended for Master's and Doctoral students across the social sciences and for all researchers concerned with the systematic analysis of texts of any kind.

Natural Language Processing and Information Systems

Text Analysis in Translation has become a classic in Translation Studies. Based on a functional approach to translation and endebted to pragmatic text linguistics, it suggests a model for translation-oriented source-text analysis applicable to all text types and genres independent of the language and culture pairs involved. Part 1 of the study presents the theoretical framework on which the model is based, and surveys the various concepts of

translation theory and text linguistics. Part 2 describes the role and scope of source-text analysis in the translation process and explains why the model is relevant to translation. Part 3 presents a detailed study of the extratextual and intratextual factors and their interaction in the text, using numerous examples from all areas of professional translation. Part 4 discusses the applications of the model to translator training, placing particular emphasis on the selection of material for translation classes, grading the difficulty of translation tasks, and translation quality assessment. The book concludes with the practical analysis of a number of texts and their translations, taking into account various text types and several languages (German, English, Spanish, French, Italian, Portuguese, and Dutch).

Medical Informatics

This book introduces the theoretical and empirical bases for the definition of language learning level in functional 'Can Do' terms for the English Profile Programme, setting out the ambitions of the Programme and presenting emerging findings. The English Profile Programme is an elaboration of the performance level descriptions of the Common European Framework of Reference for Languages (CEFR) that is concerned specifically with the English language. The CEFR has become influential in building a shared understanding of performance levels for foreign language learners. However, there is a considerable gap between the broad descriptions of levels provided, which covers a range of languages

and learning contexts, and the level of detail required for applications such as syllabus or test design, which this volume addresses. With its combination of theoretical insights and practical advice, this is a useful work for academics, policy-makers, curriculum designers, textbook writers, postgraduate students and examination board staff.

Natural Language Processing and Information Systems

Facebook, in just a few years, has become one of the central tools people use to communicate with each other in everyday life. However, the perceived freedom of action on the site and the actual processes that are permitted in Facebook's set up don't always match up: in this book this gap is examined. This book identifies the interrelations between user text actions and the software environment framing them. It takes a critical perspective on Facebook and develops a model that grants methodological access to complex interlaced practices incorporating media, text and literacies. It shows Facebook users employing idiosyncratic and Facebook-specific literacy practices, and gives weight to the larger hypothesis of the software service as an ideological setting designed to calculate and standardize human behaviour. Specifically, the book examines text action and automation within Facebook to determine how the software service intervenes in the communicative flow between/among profile owners and profile recipients. This is cutting edge work and of huge importance to modern fields of

discourse analysis and computer-mediated communication.

Text Analysis in Translation

A guide to the different systems for determining text difficulty offers a review of recently developed applications such as Lexiles, as well as traditional readability formulas and systems for beginning readers and coverage of two electronic book matching programs, Accelerated Reader and Reading Counts.

Big Brother International

This book attempts to explore style—a traditional topic—in literary translation with a corpus-based approach. A parallel corpus consisting of the English translations of modern and contemporary Chinese novels is introduced and used as the major context for the research. The style in translation is approached from perspectives of the author/the source text, the translated texts and the translator. Both the parallel model and the comparable model are employed and a multiple-complex model of comparison is proposed. The research model, both quantitative and qualitative, is duplicable within other language pairs. Apart from the basics of corpus building, readers may notice that literary texts offer an ideal context for stylistic research and a parallel corpus of literary texts may provide various observations to the style in translation. In this book, readers may find a close interaction between

translation theory and practice. Tables and figures are used to help the argumentation. The book will be of interest to postgraduate students, teachers and professionals who are interested in corpus-based translation studies and stylistics.

Language Functions Revisited

"The selection of papers presented here was originally published in 2010 as a special issue (3.2) of the journal English Text Construction."

Functional English Grammar

First published in 1988. Routledge is an imprint of Taylor & Francis, an informa company.

Berio's Sequenzas

Corpus-aided language pedagogy is one of the central application areas of corpus methodologies, and a test bed for theories of language and learning. This volume provides an overview of current trends, offering methodological and theoretical position statements along with results from empirical studies. The relationship between corpora and learning is examined from complementary perspectives ⬚ the study of learner language, the didactic use of corpus findings, and the interaction between corpora and their users. Reflections on current theory and technology open and close the volume.With its focus on the learner and the learning setting, Corpora and Language Learners is addressed to corpus linguists

with an interest in learner language, applied linguists wishing to expand their understanding of corpora and their pedagogic potential, and language teachers wishing to critically assess the relevance of work in this field. This volume grew out of selected presentations at the 5th Teaching and Language Corpora conference in Bertinoro, Italy.

Diglossia and Power

Manfred Pfister's book is the first to provide a coherent comprehensive framework for the analysis of plays in all their dramatic and theatrical dimensions. The material on which his analysis is based covers all genres and periods. His approach is systematic rather than historical, combining more abstract categorisations with detailed interpretations of sample texts.

The Book of Ezekiel and Its Influence

The text of the Qur'an appears to many to be desperately muddled and lacking any coherence. The Composition of the Qur'an provides a systematic presentation of the writing processes (or rhetoric) and argues that there is indeed a coherence to the Qur'anic text. Michel Cuypers shows that the ancient Semitic texts, of which the Qur'an is a part, do not obey the Greek rhetoric and that their basic principle is therefore not progressive linearity, but symmetry which can take several forms, following precise rules. He argues that the knowledge of this rhetorical code allows for a radically new analysis of the structure and

rhetoric of the Qur'an. Using copious amounts of examples from the text, The Composition of the Qur'an provides a new theoretical synthesis of Qur'anic rhetoric as well as a methodology for their application in further exegesis. A landmark publication in the field of Qur'anic Studies, this volume will be of interest to scholars and researchers in Islamic Studies, Religious Studies and Arabic Studies.

Discovering Ontology Mappings Using Text Analysis

What is text understanding? It is the dynamic process of constructing coherent representations and inferences at multiple levels of text and context, within the bottleneck of a limited-capacity working memory. The field of text and discourse has advanced to the point where researchers have developed sophisticated models of comprehension, and identified the particular assumptions that underlie comprehension mechanisms in precise analytical or mathematical detail. The models offer a priori predictions about thought and behavior, not merely ad hoc descriptions of data. Indeed, the field has evolved to a mature science. The contributors to this volume collectively cover the major models of comprehension in the field of text and discourse. Other books are either narrow -- covering only a single theoretical framework -- or do not focus on systematic modeling efforts. In addition, this book focuses on deep levels of understanding rather than language codes, syntax, and other shallower levels of

text analysis. As such, it provides readers with up-to-date information on current psychological models specified in quantitative or analytical detail.

Changing Sociocultural Dynamics and Implications for National Security

Learn the concepts and methods for creating economic and business value with digital analytics, mobile analytics, web analytics, and market research and social media data. In Digital Analytics Primer , pioneering expert Judah Phillips introduces the concepts, terms, and methods that comprise the science and art of digital analysis for web, site, social, video, and other types of quantitative and qualitative data. Business readers—from new practitioners to experienced executives—who want to understand how digital analytics can be used to reduce costs and increase profitable revenue throughout the business should read this book. Phillips delivers a comprehensive review of the core concepts, vocabulary, and frameworks, including analytical methods and tools that can help you successfully integrate analytical processes, technology, and people into all aspects of business operations. This unbiased and product-independent primer draws from the author's extensive experience doing and managing analytics in this field.

Corpora and Language Learners

Grenzen, ihre Überschreitung, ihre Auflösung und ihre Wiederherstellung sind ein bisher nicht systematisch

erforschtes Schlüsselkonzept für das Verständnis romantischer Literatur. Diese semiotisch-komparatistische Grundsatzstudie analysiert über drei Kulturräume hinweg vergleichend eine Vielfalt heterogener literarischer Entgrenzungsphänomene in der Romantik und entwickelt auf der Basis der romantischen Zeichentheorie ein Modell für die Analyse transepochaler Entgrenzungsphänomene. Dabei geht sie über bekannte Konzepte des paradoxen Subjekts hinaus, indem Entgrenzung als Interdependenz von Subjekt, Raum und Zeichen umfassend in detaillierten Lektüren literarischer Texte aus Deutschland, den USA und Großbritannien sowie in theoretischen Exkursen untersucht wird - von Novalis und Coleridge über Melville bis hin zu Deleuze und Guattari. Die Arbeit ist somit nicht nur ein Beitrag zur Romantikforschung, sondern lotet auch die methodologischen Möglichkeiten derselben neu aus. Die Studie wurde 2012 mit dem von der Ernst-Reuter-Gesellschaft der Freunde, Förderer und Ehemaligen der Freien Universität Berlin e.V. gestifteten Ernst-Reuter-Preis als herausragende und zukunftsweisende Promotionsarbeit ausgezeichnet. Boundaries constitute a key concept in Romanticism: their transgression, their elimination, but also their reconstruction. By analyzing the triad of sign, subject, and space, this study provides a comprehensive analysis of boundaries in German, English, and American Romanticism. Its trans-epochal approach reveals a shared dynamic of a multiplicity of heterogeneous boundary phenomena ranging from the late 18th century to postmodern Romantic texts and constructs a model for the examination of limits: a theory of a-limitation. The known concept of the

transgressive Romantic subject is integrated into this triadic model whose primordial site of a-limitation, however, is the semiotics of Romanticism. With a creative theoretical design that allows the reader to survey readings of individual texts as well as broader theoretical frameworks, "Liminal Semiotics" offers a new perspective on a variety of literary texts and theories ranging from Novalis and Coleridge to Melville and finally to Deleuze and Guattari. The thesis was awarded the Ernst-Reuter-Prize 2012 for outstanding dissertations at Freie Universität Berlin.

Liminal Semiotics

Linguistics has traditionally concentrated on studying single sentences or isolated speech acts. In this book Michael Stubbs explores one of the most promising new directions in contemporary linguistics—the study of many sentences and how they fit together to form discourse. Using many examples drawn from recorded conversations, fieldwork observations, experimental data, and written texts, he discusses such questions as how far discourse structure is comparable to sentence structure; whether it is possible to talk of "well formed" discourse as one does of "grammatical" sentences; and whether the relation between question and answer in conversation is syntactic, semantic, or pragmatic.

Qualitative Text Analysis

Advanced Schenkerian Analysis: Perspectives on Phrase Rhythm, Motive, and Form is a textbook for

students with some background in Schenkerian theory. It begins with an overview of Schenker's theories, then progresses systematically from the phrase and their various combinations to longer and more complex works. Unlike other texts on this subject, Advanced Schenkerian Analysis combines the study of multi-level pitch organization with that of phrase rhythm (the interaction of phrase and hypermeter), motivic repetition at different structural levels, and form. It also contains analytic graphs of several extended movements, separate works, and songs. A separate Instructor's Manual provides additional advice and solutions (graphs) of all recommended assignments.

Validating Second Language Reading Examinations

Highlighting data analysis and probability, this resource provides the know-how to use leveled texts to differentiate instruction in mathematics. A total of 15 different topics are featured in and the high-interest text is written at four different reading levels with matching visuals. Practice problems are provided to reinforce what is taught in the passage. The included Teacher Resource CD features a modifiable version of each passage in text format and full-color versions of the texts and image files. This resource is correlated to the Common Core State Standards. 144 pp.

Advanced Schenkerian Analysis

'This volume is the most comprehensive overview to date of sociologically orientated approaches to text and discourse analysis and is worth reading even for those who are interested only in purely linguistiv approaches to text and discourse. Its main merit, I think, is that it intorduces approaches which up to now have hardley been admitted into the universe of scientific discourse' - Discourse Studies Methods of Text and Discourse Analysis provides the most comprehensive overview currently available of linguistic and sociological approaches to text and discourse analysis. Among the 10 linguistic and sociological models surveyed in this book some of the more important are Grounded Theory, Content Analysis, Conversation Analysis and Critical Discourse Analysis. The book presents each approach according to a standardised format, which allows for direct systematic comparisons. The fully annotated lists of sources provide readers with an additional means of evaluation of the competing analytical methods. Interdisciplinary and international in its aims, Methods of Text and Discourse Analysis suggests the benefits both linguists and sociologists will derive from a more intimate knowledge of each others' methods and procedures.

Multimodal Texts from Around the World

"Digital forensics is the science of collecting the evidence that can be used in a court of law to prosecute the individuals who engage in electronic crime"--Provided by publisher.

P3 Business Analysis - Study Text

A first in multimodal/multisemiotic discourse studies this collection of original articles by international scholars focuses primarily on texts from non-English speaking contexts. The illuminating insights enhance our understanding of how language and other semiotic resources construe specific cultural and social concerns.

The Composition of the Qur'an

Methods of Text and Discourse Analysis

Since its inception, Big Brother has been versioned in over thirty countries and reached an estimated audience of over two billion. The first of its kind, this book considers the reception and impact of the series, and how different regions adopt the format to suit local cultural concerns and achieve commercial success. The book functions not only as a discussion of one single television program but also as a reflection on the medium's history and future, and its impact on popular culture.

Multilingual Text Analysis: Challenges, Models, And Approaches

This book examines the Hong Kong media over a forty year period, focusing in particular on how its newspapers and TV stations have struggled for press freedom under the colonial British administration, as

well as Chinese rule. Making full use of newly declassified material, extensive interviews and specific case-studies, it provides an illuminating analysis of the dynamics of political power and its relationship with media censorship. Overall, this book is an impressive discussion of the evolving face of the Hong Kong media, and is an important contribution to theoretical debates on the relationship between political power, economics, identity and journalism.

Discourse Analysis

Text analytics (TA) covers a very wide research area. Its overarching goal is to discover and present knowledge — facts, rules, and relationships — that is otherwise hidden in the textual content. The authors of this book guide us in a quest to attain this knowledge automatically, by applying various machine learning techniques.This book describes recent development in multilingual text analysis. It covers several specific examples of practical TA applications, including their problem statements, theoretical background, and implementation of the proposed solution. The reader can see which preprocessing techniques and text representation models were used, how the evaluation process was designed and implemented, and how these approaches can be adapted to multilingual domains.

Text Mining

The Sequenza series is one of the most remarkable achievements of the late twentieth century - a

collection of virtuoso pieces that explores the capabilities of a solo instrument and its player, making extreme technical demands of the performer whilst developing the musical vocabulary of the instrument in compositions so assured and so distinctive that each piece both initiates and potentially exhausts the repertoire of a new genre. In this book contributors demonstrate the richness of this repertoire and the many levels on which Berio and these landmark compositions can be considered.

Semantic Web Engineering in the Knowledge Society

This book is about the struggle for social power in the interethnic context of the Austrian part of the 19th Austro-Hungarian Empire. It explores how the struggle for power is reflected in attempts to control language use at different levels of discursive interaction, and how, in a context of intricate and multiple language contact, language became a prominent site for interethnic controversies and conflict. The book shows how, in the wake of ongoing democratization, in particular in 1848-1849 and after 1860, the non-German speaking nationalities of the Empire attempted to redefine their status by demanding recognition of their languages and cultures while German-dominated state nationalism tried to reestablish its endangered hegemony by granting linguistic and cultural autonomy to the various ethnic groups.
