One brave feline, exiled from her clan, must fight to survive in this PEN Award-winning author's epic fantasy adventure about a tribe of prehistoric cats. Twenty-five million years in the past, a clan of sentient, prehistoric big cats called "the Named" have their own language, traditions, and law. Led by Meoran, the Named herd horses and deer for food. They keep order and peace, fending off predatory raiders—the UnNamed—from all sides. But, the battle has taken its toll, and the Named are skirting the edge of survival. Much to the displeasure of Meoran, a young female named Ratha discovers a powerful defense against the UnNamed. She calls it "the Red Tongue," and it is a creature of incredible power. Red Tongue is fire, a force of both life and destruction that must be at once nurtured and tamed. Sensing that Ratha's mastery of fire threatens his power, Meoran banishes her from the clan. As she travels out amongst the savage UnNamed, Ratha learns about both them and herself. But, her tribe needs her. Can she return? Will the Named survive constant attacks without the Red Tongue? Will the power of the Red Tongue change the clan forever? Acclaimed author Clare Bell crafts a serious coming-of-age story filled with adventure, triumph, and heartbreak. Perfect for readers of Jean M. Auel's *The Clan of the Cave Bear*, *Ratha's Creature* will have readers hooked and clamoring for more stories of these big, noble cats.

## **Wild Cats**

Did you know that most wild cat species are small and that lions, tigers, and other large cats are the exception? That adult bobcats, clouded leopards, and other small wild cats are completely asocial? And that they fight only as a last resort? This entertaining and informative book reveals these and hundreds of other facts about the behavior, biology, and conservation of the more than 30 small wild cat species. From bobcats to servals, small cats are spread across the globe. They range in size from the rusty-spotted cat and African black-footed cat, each of which

weighs around 5 pounds when fully grown, to the Eurasian lynx, which can reach an adult weight of 60 pounds. These felids are elusive, some are nocturnal, others are arboreal, and all are rare and secretive, making them especially difficult to study. James G. Sanderson, the world's leading field expert on small wild cats, and naturalist and wildlife artist Patrick Watson provide informative and entertaining answers to common and unexpected questions about these animals. The authors explain why some small cats live on the ground while others inhabit trees, discuss the form and function of their coat types and colors, offer scientifically sound information on human-small wild cat interactions, and even review the role that small wild cats have played in literature, religion, and mythology. The world of cats is as fascinating as it is diverse. *Small Wild Cats: The Animal Answer Guide* shows just how important and interesting the littlest of the nondomesticated feline family are.

Did you know that European royalty once used cheetahs to hunt deer, or that caracals can capture birds by leaping six and a half feet straight up into the air from a standing start? Have you ever wondered whether domestic cats really do land on their feet when they fall, or how Canada lynx can stalk their prey in the winter without falling through the deep snow? Wild Cats of the World is a treasure

trove of answers to questions like these, and many others, for anyone who's interested in learning more about the world's felids, including the ones with whom we share our homes. Mel and Fiona Sunquist have spent more than a decade gathering information about cats from every available source, many of them quite difficult to find, including scientific papers, descriptions of hunts, archeological findings, observations by naturalists and travelers, reports from government agencies, and newsletters from a wide variety of organizations. Weaving information from these sources together with their own experiences observing wild cats around the world, the Sunquists have created the most comprehensive reference on felids available. Each of their accounts of the 36 species of cat contains a description of the cat, including human interactions with it, as well as detailed data on its distribution, ecology and behavior, status in the wild, and efforts to conserve it. Numerous photographs, including more than 40 in full color, illustrate these accounts. Ranging from the two-pound black-footed cat to the five-hundred-pound tiger, and from the African serval with its satellite-dish ears to the web-footed fishing cat of Asia, *Wild Cats of the World* will fascinate and educate felid fans of any stripe (or spot).
