The Wahls Protocol

Combining your body's Paleolithic needs with modern nutritional and medical research for complete mind-body wellness • Provides sustainable diet strategies to curb sugar cravings, promote fat burning and weight loss, reduce stress and anxiety, improve sleep and moods, increase energy and immunity, and enhance memory and brain function • Shows how our modern diet leads to weight gain and "diseases of civilization"--such as cancer, osteoporosis, metabolic syndrome, heart disease, and ADD • Explains how diet affects the brain, hormone balance, and the aging process and the crucial role of vitamin D in cancer and disease prevention Examining the healthy lives of our pre-agricultural Paleolithic ancestors and the marked decline in stature, bone density, and dental health and the increase in birth defects, malnutrition, and disease following the implementation of the agricultural lifestyle, Nora Gedgudas shows how our modern grain- and carbohydrate-heavy low-fat diets are a far cry from the high-fat, moderate-protein hunter-gatherer diets we are genetically programmed for, leading not only to lifelong weight gain but also to cravings, mood disorders, cognitive problems, and "diseases of civilization"--such as cancer, osteoporosis, metabolic syndrome (insulin resistance), heart disease, and mental illness. Applying modern discoveries to the basic hunter-gatherer diet, she culls from vast research in evolutionary physiology, biochemistry, metabolism, nutrition, and chronic and degenerative disease to unveil a holistic lifestyle for true mind-body health and longevity. Revealing the primal origins and physiological basis for a high-fat, moderate-protein, starch-free diet and the importance of adequate omega-3 intake--critical to our brain and nervous system but sorely lacking in most people's diets--she explains the nutritional problems of grains, gluten, soy, dairy, and starchy vegetables; which natural fats promote health and which (such as canola oil) harm it; the crucial role of vitamin D in cancer and disease prevention; the importance of saturated fat and cholesterol; and how diet affects mental health, memory, cognitive function, hormonal

balance, and cellular aging. With step-by-step guidelines, recipes, and meal recommendations, this book offers sustainable strategies for a primarily based, yet modern approach to diet and exercise to reduce stress and anxiety, lose weight, improve sleep and mood, increase energy and immunity, enhance brain function, save money on groceries, and live longer and happier.

The Migraine Miracle

When it comes to obesity, diabetes, heart disease, cancer, and depression, everything you believe is a lie. With research gleaned from the National Institutes of Health, T.S. Wiley and Bent Formby deliver staggering findings: Americans really are sick from being tired. Diabetes, heart disease, cancer, and depression are rising in our population. We're literally dying for a good night's sleep. Our lifestyle wasn't always this way. It began with the invention of the lightbulb. When we don't get enough sleep in sync with seasonal light exposure, we fundamentally alter a balance of nature that has been programmed into our physiology since day one. This delicate biological rhythm rules the hormones and neurotransmitters that determine appetite, fertility, and mental and physical health. When we rely on artificial light to extend our day until 11 p.m., midnight, and beyond, we fool our bodies into living in a perpetual state of summer. Anticipating the scarce food supply and forced inactivity of winter, our bodies begin storing fat and slowing metabolism to sustain us through the months of hibernation and hunger that never arrive. Our own survival instinct, honed over millennia, is now killing us. Wiley and Formby also reveal: -That studies from our own government research prove the role of sleeplessness in diabetes, heart disease, cancer, infertility, mental illness, and premature aging -Why the carbohydrate-rich diets recommended by many health professionals are not only ridiculously ineffective but deadly -Why the lifesaving information that can turn things around is one of the best-kept secrets of our day. Lights Out is one wake-up call none of us can afford to miss.

Paleofantasy: What Evolution Really Tells Us about Sex, Diet, and How We Live

"We want to examine what the scientific evidence suggests is really going on when we eat food, and how we can eat and live in a way that best gives us the health benefits of a hunter-gatherer lifestyle while living in and enjoying the advantages of the modern world. We also hope to use the evidence to explore how we can increase our chances of avoiding chronic diseases, obesity, and other health problems -- the "Diseases of Civilization." -- page 7.

The Paleo Answer

In this book the author, a Harvard evolutionary biologist presents an account of how the human body has evolved over millions of years, examining how an increasing disparity between the needs of Stone Age bodies and the realities of the modern world are fueling a paradox of greater longevity and chronic disease. It illuminates the major transformations that contributed key adaptations to the body: the rise of bipedalism; the shift to a non-fruit-based diet; the advent of hunting and gathering, leading to our superlative endurance athleticism; the development of a very large brain; and the incipience of cultural proficiencies. The author also elucidates how cultural evolution differs from biological evolution, and how our bodies were further transformed during the Agricultural and Industrial Revolutions. While these ongoing changes have brought about many benefits, they have also created conditions to which our bodies are not entirely adapted, the author argues, resulting in the growing incidence of obesity and new but avoidable diseases, such as type 2 diabetes. The author proposes that many of these chronic illnesses persist and in some cases are intensifying because of 'dysevolution,' a pernicious dynamic whereby only the symptoms rather than the causes of these maladies are treated. And finally, he advocates the use of evolutionary information to help nudge, push, and sometimes even compel us to create a more salubrious environment. -- From publisher's web site.

They embarked on five years of rigorous research. What they found changed their lives— and the lives of thousands of their readers. Paleo Lunches and Breakfasts On the Go

In this stunningly original book, Richard Wrangham argues that it was cooking that caused the extraordinary transformation of our ancestors from apelike beings to Homo erectus. At the heart of Catching Fire lies an explosive new idea: the habit of eating cooked rather than raw food permitted the digestive tract to shrink and the human brain to grow, helped structure human society, and created the male-female division of labour. As our ancestors adapted to using fire, humans emerged as "the cooking apes". Covering everything from food-labelling and overweight pets to raw-food faddists, Catching Fire offers a startlingly original argument about how we came to be the social, intelligent, and sexual species we are today. "This notion is surprising, fresh and, in the hands of Richard Wrangham, utterly persuasive. Big, new ideas do not come along often in evolution these days, but this is one." -Matt Ridley, author of Genome

The Whole30

We're told that if we care about our health—or our planet—eliminating red meat from our diets is crucial. That beef is bad for us and cattle farming is horrible for the environment. But science says otherwise. Beef is framed as the most

environmentally destructive and least healthy of meats. We're often told that the only solution is to reduce or quit red meat entirely. But despite what anti-meat groups, vegan celebrities, and some health experts say, plant-based agriculture is far from a perfect solution. In *Sacred Cow*, registered dietitian Diana Rodgers and former research biochemist and New York Times bestselling author Robb Wolf explore the quandaries we face in raising and eating animals—focusing on the largest (and most maligned) of farmed animals, the cow. Taking a critical look at the assumptions and misinformation about meat, *Sacred Cow* points out the flaws in our current food system and in the proposed “solutions.” Inside, Rodgers and Wolf reveal contrarian but science-based findings, such as: Meat and animal fat are essential for our bodies. A sustainable food system cannot exist without animals. A vegan diet may destroy more life than sustainable cattle farming. Regenerative cattle ranching is one of our best tools at mitigating climate change. You'll also find practical guidance on how to support sustainable farms and a 30-day challenge to help you transition to a healthful and conscientious diet. With scientific rigor, deep compassion, and wit, Rodgers and Wolf argue unequivocally that meat (done right) should have a place on the table. It's not the cow, it's the how!

The Paleo Cure

Abel James eats like a king, never goes to the gym, and is in the best shape of his life. His plan is simple: eat plenty of whole and naturally edible foods, and be sceptical of manipulated, processed food products. In The Wild Diet, he brings readers a Paleo-inspired 40 day weight loss program, showing how the answer to vibrant health doesn't live in a calorie-restricted diet, a magical fat-blasting pill or a miserable exercise program. The secret is sticking to our roots and knowing

where our food comes from.

Nom Nom Paleo

Believe it or not, our DNA is almost exactly the same as that of our ancestors. While scientific advances in agriculture, medicine, and technology have protected man, to some degree, from dangers such as starvation, illness, and exposure, the fact remains that our cave-dwelling cousins were considerably healthier than we are. Our paleolithic ancestors did not suffer from heart disease, diabetes, high blood pressure, or obesity. In fact, a good deal of what we view as normal aging is a modern condition that is more akin to disease than any natural state of growing older. Disease-free and strikingly fit, 72-year-old Arthur De Vany--grandfather of the "Paleo lifestyle movement"--is living proof that it pays to live like a caveman. In *The New Evolution Diet*, De Vany offers you a roadmap back to better health. The plan is built on three principles: eat three meals a day made up of nonstarchy vegetables, fruits, and lean proteins skip meals occasionally to promote a low fasting blood insulin level exercise less, not more, in shorter, high-intensity bursts By cutting out modern foods--including carbohydrates, dairy, and all processed foods--anyone can lose weight, gain muscle, and enjoy a longer, better life.

Discovering the Word of Wisdom

“With . . . evidence from recent genetic and anthropological research, [Zuk] offers a dose of paleoreality.”—Erin Wayman, *Science News* We evolved to eat berries rather than bagels, to live in mud huts rather than condos, to sprint barefoot rather than play football—or did we? Are our bodies and brains truly at odds with modern life? Although it may seem as though we have barely had time to shed our hunter-gatherer legacy, biologist Marlene Zuk reveals that the story is not so simple. Popular theories about how our ancestors lived—and why we should emulate them—are often based on speculation, not scientific evidence. Armed with a razor-sharp wit and brilliant, eye-opening research, Zuk takes us to the cutting edge of biology to show that evolution can work much faster than was previously realized, meaning that we are not biologically the same as our caveman ancestors. Contrary to what the glossy magazines would have us believe, we do not enjoy potato chips because they crunch just like the insects our forebears snacked on. And women don’t go into shoe-shopping frenzies because their prehistoric foremothers gathered resources for their clans. As Zuk compellingly argues, such beliefs incorrectly assume that we’re stuck—finished evolving—and have been for tens of thousands of years. She draws on fascinating evidence that examines everything from adults’ ability to drink milk to the texture of our ear wax to show that we’ve actually never stopped evolving. Our nostalgic visions of an ideal evolutionary past in which we ate, lived, and reproduced as we were “meant to” fail to recognize that we were never perfectly suited to our environment. Evolution is about change, and every organism is full of trade-offs. From debunking the caveman diet to unraveling gender stereotypes, Zuk delivers an engrossing analysis of widespread paleofantasies and the scientific evidence that undermines them, all the

while broadening our understanding of our origins and what they can really tell us about our present and our future.
