Highway Construction and Maintenance

Transport in the Urban Environment

The accident record of the construction industry is one of the worst in Britain. This book is a guide to safety for all those in the industry to whom the duty of care in design and construction management applies. It gives advice on health and safety, and analyzes the problems and their solutions.

Safer Road Works Ahead

In the operation and maintenance of highway networks, it is necessary from time to time to put in place temporary traffic management measures to facilitate safe road works or temporary closures or incident management, whilst keeping the traffic flowing as freely as possible. The Operations Document provides guidance for those responsible for planning, managing and participating in operations to implement, maintain and remove temporary traffic management arrangements.

Traffic Signs Manual

This reference aims to establish a common standards for the design and construction of tunnelling in the UK. With the minimum of modification the specification is also suitable for international use. It includes recent legislation, and indicates minimum standards for materials and workmanship, and has been written to be used as a contract specification on its own, or in conjunction with other standard specifications on multi-disciplinary projects. Drawing heavily on the practical experience of both corporate and individual members of the British Tunnelling Society, this document provides a sound basis for specifying tunnelling design and construction.

Model Specification for Tunnelling

Roadwork

The Part 3 Update provides information on changes to the methods used to prescribe traffic signs in the 2016 Traffic Signs Regulations and General Directions. In most cases, the same signs will be used in the same situations as shown in Parts 1 and 2 (2009). This part provides a reference on where the requirements for individual signs in the TSRGD and design information can be found. This part introduces new options for lane control 'wicket' signs and guidance on how these new options should be applied to different types of schemes. While this part does not replace the design of temporary traffic management arrangements it does provide updates on relaxation schemes and on selecting safe methods of installing signs and other equipment.

Sessional Papers

Dated February 2011. Supersedes June 2010 issue (ISBN 9780115531460). Updated lists of addenda for Northern Ireland, Scotland and Wales, and a list of current Scottish Office Memoranda not included in the DMRB, are included with this Index for information

Stationery Office Annual Catalog 2007

This publication sets out the statutory requirements for signing, lighting, and guarding at street works and road works. This is the core reference manual for utility companies, local authorities, street work contractors and others whose day-to-day business involves street works (works by statutory undertakers and other utility companies etc) and road works (works to maintain or repair road infrastructure). The code, which covers all of the UK and includes national variations, is now compulsory for highway/road authorities in England, Wales and Northern Ireland. It applies to all single carriageway roads and dual carriageways with a speed limit of 40 mph or less. The code is now divided into three parts: Basic Principles, Operations, and Equipment and Vehicles; site layout diagrams have been redrawn to make them easier to understand. There is: increased emphasis on using risk assessment and guidance on what to consider in such assessments; strengthened guidance on providing for pedestrians and cyclists and new guidance on traffic control measures related to road closures, one-way working and temporary road obstructions; enhanced advice on other traffic control measures including works near tramways and railways, and mobile/short duration works; and updated advice on high visibility clothing and the signing and conspicuity requirements for work vehicles. Effective from 1 October 2014 when it will supersede the 2001 edition (ISBN 9780115519581).

Highway Construction and Maintenance

The Design of Traffic Signs

In the operation and maintenance of highway networks, it is necessary from time to time to put in place temporary traffic management measures to facilitate safe road works or temporary closures or incident management, whilst keeping the traffic flowing as freely as possible. The Operations Document provides guidance for those responsible for planning, managing and participating in operations to implement, maintain and remove temporary traffic management arrangements.

Highways and Transportation

It is the responsibility of road workers or supervisors to ensure that all works and workers are safe and that drivers are informed in advance about the nature of any obstruction. This booklet advises on what to do when signing road works and is complementary to Traffic Signs Manual Chapter 8.

HMSO Annual Catalogue

Management of electronic traffic equipment

Roadwork: Theory and Practice, now in its sixth edition, gives the essential information needed by every road worker, highway technician, incorporated, graduate or chartered engineer, not only by explaining the theory of road construction and its associated activities, but by illustrating its application with practical working methods that are in use in everyday engineering practice. As such, it successfully bridges the gap so often found between civil engineering theory and the day-to-day work of a highways engineer. The authors have drawn from a lifetime of experience in the construction industry and included current design and construction practices.

Government Publications

This publication contains important guidance for local authorities that own and operate electronic traffic equipment on their network. This Code of Practice is the first document within the UK which establishes a series of good practice policies and procedures, obtained from experts, on how effectively to manage the maintenance of fixed location electronic traffic control equipment. The growth of technology in the highways sector has led to improvements in congestion control and a reduction in carbon emissions. Adoptions of the recommendations within this code will help local authorities achieve delivery of high quality services.

Traffic Signs Manual

There is a growing evidence base that documents the social, environmental and economic benefits that urban trees can deliver. Trees are, however, under threat today as never before due to competition for space imposed by development, other hard infrastructures, increased pressure on the availability of financial provision from local authorities and a highly cautious approach to risk management in a modern litigious society. It is, therefore, incumbent upon all of us in construction and urban design disciplines to pursue a set of goals that not only preserve existing trees where we can, but also ensure that new plantings are appropriately specified and detailed to enable their successful establishment and growth to productive maturity. Aimed at developers, urban planners, urban designers, landscape architects and arboriculturists, this book takes a candid look at the benefits that trees provide alongside the threats that are eliminating them from our towns and cities. It takes a simple, applied approach that explores a combination of science and practical experience to help ensure a pragmatic and reasoned approach to decision-making in terms of tree selection, specification, placement and establishment. In this way, trees can successfully be incorporated within our urban landscapes, so that we can continue to reap the benefits they provide.
