In *Information Rules*, authors Shapiro and Varian reveal that many classic economic concepts can provide the insight and understanding necessary to

succeed in the information age. They argue that if managers seriously want to develop effective strategies for competing in the new economy, they must understand the fundamental economics of information technology. Whether information takes the form of software code or recorded music, is published in a book or magazine, or even posted on a website, managers must know how to evaluate the consequences of pricing, protecting, and planning new versions of information products, services, and systems. The first book to distill the economics of information and networks into practical business strategies, *Information Rules* is a guide to the winning moves that can help business leaders navigate successfully through the tough decisions of the information economy.

A timely chronicle of what is now an ordinary day in America, where gun violence regularly takes the lives of children and teens, and leaves shattered families in its wake. Winner of the 2017 J. Anthony Lukas Prize Shortlisted for the 2017 Hurston/Wright Foundation Award Finalist for the 2017 Helen Bernstein Book Award for Excellence in Journalism Longlisted for the 2017 Andrew Carnegie Medal for Excellence in Non Fiction On an average day in America, seven children and teens will be shot dead. In *Another Day in the Death of America*, award-winning journalist Gary Younge tells the stories of the lives lost during one such day. It could have been any day, but he chose November 23, 2013. Black, white, and Latino, aged nine to nineteen, they fell at sleepovers, on street corners, in stairwells, and on their own doorsteps. From the rural Midwest to the barrios of Texas, the narrative crisscrosses the

country over a period of twenty-four hours to reveal the full human stories behind the gun-violence statistics and the brief mentions in local papers of lives lost. This powerful and moving work puts a human face-a child's face-on the "collateral damage" of gun deaths across the country. This is not a book about gun control, but about what happens in a country where it does not exist. What emerges in these pages is a searing and urgent portrait of youth, family, and firearms in America today.

These essays provide a thorough introduction to economics for historians. The authors, all eminent scholars, show how to use economic thinking,

economic models, and economic methods to enrich historical research. They examine such vital issues as long-term trends, institutions, labor—including an engaging dialogue between a labor historian and a labor economist—international affairs, and money and banking. Scholars and teachers of history will welcome this volume as an introduction and guide to economics, a springboard for their own research, and a lively and provocative source of collateral reading for students at every level. The combined research experience of these authors encompasses many varieties of economics and covers a kaleidoscopic array of nations, subjects, and time periods. All are expert in presenting the insights and complexities of economics to nonspecialist audiences.
