Inquiry into signed languages has added to what is known about structural variation and language, language learning, and cognitive processing of language. However, comparatively little research has focused on communication disorders in signed language users. For some deaf children, atypicality is viewed as a phase that they will outgrow, and this results in late identification of linguistic or cognitive deficits that might have been addressed earlier. This volume takes a step towards describing different types of atypicality in language communicated in the signed modality such as linguistic impairment caused by deficits in visual processing, difficulties with motor movements, and neurological decline. Chapters within the book also consider communication differences in hearing children acquiring signed and spoken languages.

Master's Thesis from the year 2009 in the subject

Information Management, grade: A, Robert Gordon University Aberdeen, language: English, abstract: The overall aim of this study was to draw-up recommendations on how the collaborative virtual learning environment 'Moodle' could be integrated and embedded more effectively in the studies of postgraduate Oil & Gas related courses at The Robert Gordon University. A single intrinsic case study approach was chosen. Data was collected using usability testing and observation, interviews, questionnaires, Freedom of Information Requests and additional data sources such as relevant conferences and secondary research for literature review. Background information was provided by introducing the University's infrastructure, relevant student demographics related to the investigated module 'Business Essentials' and analysing the Moodle implementation. By focussing on students' and academics' information needs, an evaluation of current processes and setups within the University's network and Moodle was undertaken. Navigation and consistency as core usability issues were investigated and examples of a potential re-design provided. The e-learning aspect was evaluated by investigating interactivity in 'Business Essentials'. By adapting existing learning content, a demonstration of using Moodle feature in the investigated module was given. Additionally, challenges and opportunities outside the Moodle environment were identified. Within the analysis recommendations were made as appropriate in the relevant sections. Key findings of this study were that usability issues need to be addressed in order to provide meaningful information to individual user groups. Furthermore, existing Moodle features

need to support interactive learning and address students' learning style. Additionally, staff training regarding Moodle features, e-learning facilitation and search skills needs to be addressed. Finally, it was found that the University would benefit from establishing a Knowledge Management strategy. A summary of recommendation was detailed in a separate chapter.

The Art of Software Testing

Seminar paper from the year 2018 in the subject Business economics - Personnel and Organisation, grade: 1,0, Technical University of Munich (Chair of Corporate Management), language: English, abstract: New forms of applications are emerging with the introduction of image-based communication in the application process. The trend of application videos hast the potential to reduce costs and risks for organizations among other considerable opportunities, but this application type has not been popularly implemented by organizations in their recruiting processes yet. However, there is practically no scientific research on the use of these videos and whether (and to what degree) applicants accept this application trend. For this term paper, applicants' aversion to application videos and potentially related constructs are empirically examined via an online survey with a sample of students from all over Germany. Results show relatively high aversion to

application videos among the participants but there are differences depending on the students' fields of study. Correlation analysis reveals a weak negative correlation between video technology ac- ceptance and aversion to application videos. Furthermore, aversion to application videos is positively correlated with participants' risk aversion whereas no significant correlation with job application experience was be found. This term paper emphasizes that applicants' aversion to application videos is substantial and should therefore be carefully considered in the adoption of this trend. It represents continuation of research on e-selection solutions and builds a sound starting point for future research on application videos.
