Low Profile Amateur Radio

World's Best Hobby is an unusual title for a memoir, which is exactly what this book is. It's my life in the fascinating hobby of Amateur Radio. Much of my professional life is spent producing documentary and reality programs for television (including more than a few about Ham Radio) where I learned that the purpose of a title is to attract an audience and if it was also true, all the better. The challenge with documentary films is to make them entertaining first and foremost, and informational if possible. I've tried very hard to make this book entertaining, and from feedback I've gotten (from Hams and wannabee Hams who found it posted online as I was writing it) I've succeeded, at least to some extent. I tried to make the book fun because Ham Radio is fun. And Ham Radio has more facets than a cheap diamond, as you'll discover as you dig into World's Best Hobby. Enjoy! PS. Let me know what you think of World's Best Hobby - especially if you like it. 73, Dave Bell, W6AQ

Your how-to guide to become a ham Ham radio, or amateur radio, is a way to talk with people around the world in real-time, or to send email without any sort of internet connection. It provides a way to keep in touch with friends and family, whether they are across town or across the country. It is also a very important emergency communication system. When cell phones, landlines, the internet, and other systems are down or overloaded, Amateur Radio still gets the message through. Radio amateurs, often called "hams," enjoy radio technology as a hobby, but are often called upon to provide vital service when regular communications systems fail. Ham Radio For Dummies is your guide to everything there is to know about ham radio. Plus, this updated edition provides new and additional information on digital mode operating, as well as use of amateur radio in student science and new operating events. • Set up your radio station • Design your ham shack • Provide support in emergencies and communicate with other hams • Study

John Tusa is a distinguished journalist, broadcaster and leader of arts organisations, best remembered for his times at the BBC, including creating Newsnight. Tusa's memoir is etched with candour. His account of two years of internecine warfare at the top of the BBC under the Chairman, 'Dukey' Hussey will go down as a major contribution to BBC history. His recollections of a hilarious and petty-minded few months as head of a Cambridge college will be read as a case study of the absurdities of academic life; while running the rejected and maligned Barbican Centre, Tusa led its recovery into the major cultural centre that it is today.

For the radio amateur. The Old Patriarch K3MT recollects a number of HF antenna topics. Many are about simple antennas made of ordinary wire. A few concern the effects of real dirt close to the antenna and how it reacts with the antenna's pattern. 8 x 10 format. 105 pages.

This book includes useful tips and tricks for the configuration and operation of the fabulous Icom IC-7300 transceiver. Rather than duplicate the manuals which describe each button, function, and control, I have used a more functional approach. This is a "how to do it" book with easy to follow step by step instructions. The IC-7300 has created something of a revolution in the amateur radio world. With this radio, Icom provides the advantages of SDR technology in a format that is familiar for users of their earlier transceivers. Most importantly the IC-7300 has many features that were previously only available on much more expensive radios.

Listening on the Short Waves, 1945 to Today

Published to mark the centenary of the sinking, this book tells the story of the

Titanic from a new angle: the role of wireless in the disaster. Drawing on the Marconi Archives in the Bodleian Library, the most extensive record of wireless communications, the book recounts the fateful events of April 1912 using complete transcripts of the messages to re-tell this well-known story from a different perspective. The narrative begins with warnings of ice, including one sent from the S.S. Californian, the closest ship to the Titanic, just hours before the fatal collision. It follows Jack Phillips, the senior operator on board the R.M.S. Titanic, as he begins sending the 'CQD' Marconi distress signals late on the night of April 14th. We see how these urgent calls were received by nearby ships and how news was passed rapidly across the Atlantic, in a desperate attempt to save the lives of the passengers and crew. The story ends with messages from the few lucky survivors safely on their way to New York. The directness and brevity of the messages gives the narrative a compelling impact and immediacy. Titanic Calling brings to life the voices of the individuals in this drama, retelling this legendary story as it was first heard.

World's Best Hobby

"This book presents the histories of the major North American shortwave clubs and reviews the professional and listener-generated shortwave literature of the era. It also covers the DX programs and other listening fare to which shortwave listeners were most attracted and the QSL-cards they sought as confirmation of their

reception."--Provided by publisher.

Titanic Calling

ASHLYN I went against all I believed in and fell in love with what should have been a one-night stand! I fought it, tried to make up rules to prevent the inevitable, but somehow, he knew all along. He understood what I wanted and was willing to comply. I was the one who took him for granted. I was the one who made him walk away. And now, he's gone and I'm left with nothing but my thoughts and regrets. He was never supposed to be my happily ever after. But my favorite love story ends in tragedy, so why wouldn't mine? RYDER I played the white knight, doing what every woman dreams of to win her over, yet it still got me nowhere! But what did I expect? I wasn't the man she wanted! Nothing I could have done would have landed me the girl. I guess love is funny that way. One minute, you think you have the girl, and the next, you realize you were blinded. Walking away was hard, but watching her with another man was harder. Sometimes you have to pick your battles, and I know when I've lost. Love shouldn't be a game, but I learned

someone always loses. For once, I wasn't the one being selfish, but I was the one who paid the price.

Ham Radio For Dummies

SolderSmoke is the story of a secret, after-hours life in electronics. Bill Meara started out as a normal kid, from a normal American town. But around the age of 12 he got interested in electronics, and he has never been the same. To make matters worse, when he got older he became a diplomat. His work has taken him to Panama, Honduras, El Salvador, the Spanish Basque Country, the Dominican Republic, the Azores islands of Portugal, London, and, most recently, Rome. In almost all of these places his addiction to electronics caused him to seek out like-minded radio fiends, to stay up late into the night working on strange projects, and to build embarrassingly large antennas above innocent foreign neighborhoods. SolderSmoke takes you into the basement workshops and electronics parts stores

of these exotic foreign places, and lets you experience the life of an expatriate geek. If you are looking for restaurant or hotel recommendations, look elsewhere. But if you need to know where to get an RF choke re-wound in Santo Domingo, SolderSmoke is the book for you. SolderSmoke is no ordinary memoir. It is a technical memoir. Each chapter contains descriptions of Bill's struggles to understand (really understand) radio-electronic theory. Why does $P=IE$? Do holes really flow through transistors? What is a radio wave? How does a frequency mixer produce sum and difference frequencies? If these are the kinds of questions that keep you up at night, this book is for you. Finally, SolderSmoke is about brotherhood. International, cross-border brotherhood. Through the SolderSmoke podcast we have discovered that all around the world, in countries as different as Sudan and Switzerland, there are geeks just like us, guys with essentially the same story, guys who got interested in radio and electronics as teenagers, and who have stuck with it ever since. Our technical addiction gives us something in common, something that transcends national differences. And our electronics gives us the means to communicate. United by a common interest in radio, and drawn closer together by means of the internet, we form an "International Brotherhood of Electronic Wizards."
